Selecting and Measuring Pipe & Fittings

Pipe Basics

Have you ever tried to order fittings, pipe, nipples, or valves and had difficulty determining the size? If so, you're not alone. Even experienced maintenance people are sometimes confused by the industry's terminology and method of sizing. Before joining a pipe with a fitting or valve, you need to know the *pipe size*, *thread style*, and *thread type*—the pipe sizes must be the same and the thread types must be compatible in order for two components to fit properly.

Pipe Size and Thread Size

When we provide the size of a pipe or fitting in our catalog, we will call it a pipe size or a thread size.

Pipe size, which is the most common, is not an actual measured size, but rather an industry designation. When people refer to pipe size, they sometimes call it IPS or nominal size. You can determine pipe size by using the sizing guides at the bottom of this page. You can also use a sizing gauge or kit sold separately below.

Thread size is the actual measured diameter of the threads. The most common connections that have a thread size are UN/UNF and metric threads; for these, you can use a ruler to measure the threads.

Thread Style

There are two thread styles: tapered and straight.

Tapered threads, which are the most common type, have a slight taper toward the end of the fitting. When threads are mated and tightened together, they hold the fitting in place and seal the connection.

Straight (parallel) threads maintain the same diameter along their entire length. They're used for mechanical joining and serve one purpose—to hold a fitting in place. Straight threads require a seal to make a tight connection.

Pipe Size Measuring Gauges and Kits

Accurately determine the size of your pipe and fittings with one of these kits. For more gauges, see pages 2263-2265.

Pipe Size Measuring Gauges

Quickly measure your pipe and fittings. This plastic gauge measures male and female threads in NPT and BSPT pipe sizes 1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2, and 2. It includes two metal gauges for measuring NPT and BSPT thread pitch.

5887T1 ..... $8.13

Thread Pitch Measuring Kits

You'll get four gauges that measure the pitch of BSPT, BSPP, metric, NPT, and UN/UNF threads; a caliper; and an instruction manual. The gauges and caliper are metal. Furnished in a folding plastic case.

7863K1 ..... $42.44

Pipe Size Kits

6-Piece Kit

Kits include brass 90° elbows that have male threads on one end and female threads on the other end.

No. of Pieces	For Pipe Sizes	NPT Kits		BSPT Kits	
6	1/8, 1/4, 3/8, 1/2, 3/4, 1	7843K5	$18.32	7843K7	$19.79
9	1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2, 2	7843K6	52.62	7843K8	56.84

How to Measure Threaded Pipe and Fittings

ⓘ To measure larger pipe and fittings up to pipe size 8, go to mcmaster.com and search for **4464KAC**.

How To Measure Pipe and Fittings with Male (External) Threads

Place the outside edge of the pipe or fitting on the "0" line. The line on the opposite edge gives the pipe size.

How To Measure Fittings with Female (Internal) Threads

Align the top of the threads on one wall (not the wall itself) with the "0" line. The line that aligns with the top of the threads on the opposite side gives the pipe size.

Thread Type Compatibility

In order for two components to fit properly, thread types must be compatible. See the list below for thread types that can be used together.

Thread Type	Compatibility
Tapered Threads	
NPT—National Pipe Taper (Also known as MPT and FPT threads)	Male threads work with female NPT, NPTF, NPSM, NPSH, NPSL, and NPSC. Female threads work with male NPT and NPTF.
NPTF—National Pipe Tapered Fuel (Also known as Dryseal)	Male threads work with female NPTF, NPT, NPSM, and NPSH. Female threads work with male NPTF and NPT.
BSPT—British Standard Pipe Taper (Also known as R threads and 55° Whitworth)	Male threads work with female BSPT and BSPP. Female threads work with male BSPT.
Straight (Parallel) Threads	
BSPP—British Standard Pipe Parallel (Also known as G threads and 55° Whitworth)	Male threads work with female BSPP. Female threads work with male BSPP and BSPT.
NPSM—National Pipe Straight Mechanical	Male threads work with female NPSM and NPSH. Female threads work with male NPSM, NPT, and NPTF.
NPSH—National Pipe Straight Hose	Male threads work with female NPSH. Female threads work with male NPSH, NPT, NPTF, and NPSM.
NPSL—National Pipe Straight Locknut	Threads are female and work with male NPT.
NPSC—National Pipe Straight Coupling	Threads are female and work with male NPT.
NH/NST—National Hose/National Standard Thread	Work with other NH/NST threads.
GHT—Garden Hose Thread	Work with other GHT threads.
UN/UNF—Unified	Work with other UN/UNF threads.
Metric Thread DIN 3852	Work with other DIN 3852 threads.
Metric Thread DIN 3901/3902	Work with other DIN 3901/3902 threads.

NPT (National Pipe Taper) and BSP (British Standard Pipe) Threads

NPT threads are common in the United States, while BSP threads are widely used in many other countries. NPT threads are tapered, while BSP threads come in both tapered (BSPT) and straight/parallel (BSPP) styles.

NPT and BSP threads are not compatible; however, when placed side-by-side, you may not be able to tell them apart. There are two ways to determine if you have NPT threads or BSPT threads.

The first way is by examining the shape and angle of the threads. NPT threads are set at a 60° angle and have flattened peaks and valleys; BSP threads are set at a 55° angle and have rounded peaks and valleys.

The second way is to find the pitch, which is also known as threads per inch. Either count the number of threads that fall into a 1″ span or use a thread gauge (sold on page 2) for a precise measurement.

8 Threads per Inch

Pipe Size	Pitch (Threads/Inch) NPT	Pitch (Threads/Inch) BSP
1/16	27	___
1/8	27	28
1/4	18	19
3/8	18	19
1/2	14	14
5/8	___	14

Pipe Size	Pitch (Threads/Inch) NPT	Pitch (Threads/Inch) *BSP*
3/4	14	14
1	11 1/2	11
1 1/4	11 1/2	11
1 1/2	11 1/2	11
2	11 1/2	11
2 1/2	8	11

Pipe Size	Pitch (Threads/Inch) NPT	Pitch (Threads/Inch) BSP
3	8	11
3 1/2	8	11
4	8	11
5	8	11
6	8	11
8	8	___

Unthreaded Pipe Dimensions and Schedule

Metal pipe, plastic pipe, and plastic pipe fittings are generally rated by schedule, which refers to the wall thickness. As the Schedule increases, the walls get thicker towards the center for any given pipe size.

Metal pipe fittings are not usually rated by schedule; they are instead rated by the amount of pressure (psi) they can withstand.

Pipe Size	Actual Unthreaded Pipe OD	Thin Wall (Schedule 10) Our lightest weight pipe.		Standard Wall (Schedule 40) Most popular choice for all around use.		Thick Wall (Schedule 80) Designed for high-pressure applications.		Extra-Thick Wall (Schedule 160) Hefty construction for extreme pressures.		Super-Thick Wall (Schedule XXH) Use for your most demanding applications.	
		Pipe ID	Wall Thick.	Pipe ID	Wall Thick.	Pipe ID	Wall Thick.	Pipe ID	Wall Thick.	Pipe ID	Wall Thick.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Stainless Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pages 6-8)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

Don't confuse these with poor-quality fittings that don't make the grade—these are the highest quality Class 150 low-pressure stainless steel fittings available. Their high quality is proven by the standards they meet: ANSI/MSS SP-114 (for heat treating, material thickness, and marking) and ASTM A351, except hex-socket plugs.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Connections: NPT, except locknuts are NPSL (National Pipe Straight Locknut) and hex-socket plugs are NPTF (Dryseal); both NPSL and NPTF threads are compatible with NPT threads.

Elbows, Tees, Crosses, and Unions

The ***90° female×male elbows*** are also known as street elbows.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows		Tees		Crosses		Unions

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Type 304/304L Stainless Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

You may know these as Schedule 40 threaded nipples and pipe—they're made of Type 304/304L stainless steel, which offers very good corrosion resistance for an economical alternative to Type 316/316L. They have welded construction, so there's a weld bead on the inside, except 1/8-3/8 pipe sizes are seamless. Meet ASTM A733, ASTM A312, and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Type 316/316L Stainless Steel Threaded Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

Made from Type 316/316L stainless steel, which contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L, these threaded nipples and pipe are known as Schedule 40. They have welded construction, so there's a weld bead on the inside, except 1/8–3/8 pipe sizes are seamless. Meet ASTM A733, ASTM A312, and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Stainless Steel Threaded-On-One-End Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)
- Flanges: Use threaded low-pressure stainless steel (see below)

One end of these Schedule 40 nipples is threaded for a quick connection, while the other end is unthreaded for a welded connection. They have welded construction so there is a weld bead on the inside, except 1/8-3/8 pipe sizes are seamless. Meet ASTM A312, ASTM A733, and ANSI/ASME B1.20.1.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT on one end, unthreaded on the other end.

Low-Pressure Stainless Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pages 6-7 and above)
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)

Create a flange connection to gain easy access to your pipe. Bolt two same-size flanges together with a gasket (not included) to form a tight seal. For gaskets, see pages 3474-3480; for bolts, see pages 3146-3147.

Forged Flanges— These high-strength flanges are also called ANSI flanges and raised-face flanges. Match with another ANSI/raised-face flange of the same size for connection. They meet ASTM A182 and ANSI/ASME B16.5.

Cast Flanges— Also called MSS flanges and flat-face flanges. Match with another MSS/flat-face flange of the same size for connection. Flanges meet ASTM A351 and conform to MSS SP-42 for diameter and bolt holes and MSS SP-51 for thickness.

Types 304 and ***304/304L stainless steel*** offer very good corrosion resistance for an economical alternative to Types 316 and 316/316L.

Types 316 and ***316/316L stainless steel*** contain more nickel and have molybdenum for better resistance to corrosion than Types 304 and 304/304L.

Connections: NPT.

Forged Flanges—Raised surface on the back.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Stainless Steel Threaded Reducing Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pgs. 6-8)
- Fittings: Use threaded Class 150 low-pressure stainless steel (see pages 4-5)

The connecting point is reduced, so you can transition your piping system to a smaller pipe size. Also known as Class 150 and raised-face flanges, bolt one of these forged flanges to your flange (be sure the flange pipe size, flange OD, and number of bolt holes are the same). A gasket is required, but not included. For gaskets, see pages 3474-3480; for bolts, see pages 3146-3147. Meet ASTM A182 and ANSI/ASME B16.5.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT.

Ultra-Corrosion-Resistant Alloy 20 Threaded Pipe Fittings

- Use with air, water, steam
- Maximum Pressure: Fittings: 300 psi @ 72° F; 150 psi @ 366° F for steam Pipe Nipples: Not rated

Able to resist sulfuric acid, pitting, and stress cracking, Alloy 20 is the superhero of stainless steel fittings. Also called Carpenter 20, it contains more nickel than Type 316, so it is suited for especially corrosive environments.

Fittings—Also known as Class 150 fittings. Meet ANSI/MSS SP-114, ASTM B351, ASTM B473, and ANSI/ASME B1.20.1.

Pipe Nipples—Also known as Schedule 40 and standard-wall threaded nipples. All have seamless construction for unrestricted flow. *Fully threaded* nipples are also called close nipples; they are threaded on each end to the center. Meet ASTM B729 and ANSI/ASME B36.10 and SB729.

Connections: NPT.

Miniature Stainless Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 500 psi @ 72° F; 100 psi @ 350° F for steam

Our compact fittings are ideal for cramped spaces. All are Type 303 stainless steel, which offers very good corrosion resistance. Meet ASTM A314, A320, and A582.

Connections: NPT (1/16, 1/8, 1/4); metric straight threads (M3×0.5, M5×0.8, M6×1.0, M8×1.0); and UN/UNF straight threads (4-28, 10-32). All male straight threads include a fluoroelastomer gasket.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Low-Pressure Stainless Steel Pipe Fittings

CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe and Pipe Nipples: Use British standard threaded Schedule 40 standard-wall stainless steel (see below)

Connect to BSPT pipe with fittings threaded for the job. Also known as Class 150 fittings, they're made from Type 304 stainless steel, which offers very good corrosion resistance. These high-quality fittings, with the exception of hex adapters, meet MSS SP-114 for heat treating, material thickness, and marking.

90° female×male elbows are also known as street elbows. ***Plugs*** are hollow, except the square-head plugs with 1/8-3/8 pipe sizes are solid.

Connections: BSPT (British Standard Pipe Taper); hex adapters have NPT threads on one end.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows		Tees		Crosses		Unions

British Standard Threaded Stainless Steel Pipe Nipples and Pipe

CAD

- Use with air, water, oil, natural gas, steam
- Fittings: Use British standard threaded Class 150 low-pressure stainless steel (see above)

You'll get BSPT threads on one or both ends of this Schedule 40 pipe. Made of Type 304/304L stainless steel, which offers very good corrosion resistance. All have welded construction, so there's a weld bead on the inside. Meet ASTM A312.

Fully threaded nipples are also called close nipples; they're threaded on each end to the center.

Connections: BSPT (British Standard Pipe Taper) or NPT.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Stainless Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 1,000 psi @ 72° F; 650 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall stainless steel (see pages 6-8)
- Flanges: Use threaded low-pressure stainless steel (see page 8)

Choose these fittings when you want the same high quality found in our low-pressure fittings, but need more strength to handle higher pressures. Also known as Class 1000, these fittings meet ANSI/MSS SP-114 (for heat treating, material thickness, and marking) and ASTM A182.

Type 304 stainless steel offers very good corrosion resistance. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Half couplings are partially threaded; one end has an unthreaded portion that can be welded.

Connections: NPT.

Mil. Spec. Stainless Steel Threaded Hex-Socket Plugs

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F; 600 psi @ 220° F for steam

Made to the stringent military standards of MS-27769, these high-quality, aircraft-grade plugs are the best you can buy. They are made from Type 347 stainless steel, which offers resistance to corrosion and prolonged heat exposure. Plugs also meet SAE AS4842 and AS71051.

Connections: ANPT (Aeronautical National Pipe Threads), which are more precise than NPT and NPTF threads, yet compatible.

Pipe Size	Hex Key Size		
1/16	5/32″	1725K11	$2.67
1/8	3/16″	1725K12	3.33
1/4	1/4″	1725K13	4.17
3/8	5/16″	1725K14	11.36
1/2	3/8″	1725K15	21.43

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Stainless Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure:
  Type 304 SS: 2,570 psi @ 72° F;
  1,965 psi @ 350° F for steam, unless noted
  Type 316 SS: 3,000 psi @ 72° F;
  2,810 psi @ 350° F for steam, unless noted
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall stainless steel (see pages 14-15)

It's no wonder these heavy duty fittings are called Class 3000—they have extra-strong forged or bar stock construction that stands up to high-pressure applications. Meet ASTM A182 and ANSI/ASME B16.11, unless noted.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Connections: NPT.

Elbows, Tees, Crosses, and Unions

90° female×male elbows are also known as street elbows.

High-Pressure Stainless Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall stainless steel (see pages 14-15)

Commonly called Class 300, ANSI, and raised-face flanges, these high-strength forged flanges provide easy access to your pipe. Bolt two same-size flanges together with a gasket (not included) to form a tight seal. For gaskets, see pages 3474-3480; for bolts, see pages 3146-3147. Flanges meet ASTM A182 and ANSI/ASME B16.5.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT.

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Stainless Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 3000 high-pressure stainless steel (see pages 12-13)
- Flanges: Use threaded high-pressure stainless steel (see page 13)

The thick-wall design, which is often called Schedule 80, gives these threaded nipples and pipe the strength to handle high-pressure applications. All have seamless construction for unrestricted flow. Meet ASTM A733, ASTM A312, and ANSI/ASME B1.20.1.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Thick-Wall Smooth-Flow Stainless Steel Threaded Reducing Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded medium-pressure stainless steel (see page 11)
- Flanges: Use threaded high-pressure stainless steel (see page 13)

Also known as swage nipples and Schedule 80 nipples, the walls reduce gradually to provide smoother flow than other types of reducing connections. They're made of Type 304/304L stainless steel, which offers very good corrosion resistance, and have seamless construction for unrestricted flow. Meet MSS SP-95 and ASTM 403 WP.

Connections: NPT.

Pipe Size (A)	(B)	Lg.

High-Strength Lightweight Titanium Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: 3,000 psi @ 72° F

With excellent strength-to-weight ratio, titanium fittings are approximately 40% lighter than steel. Titanium offers superior corrosion resistance and will stand up to most salt water and chloride applications. Fittings meet ASTM B381. Dimensions conform to ANSI/ASME B16.11.

Half couplings are partially threaded; one end has an unthreaded portion that can be welded.

Connections: NPT.

Pipe Size	Couplings		Half Couplings		Square-Head Plugs		Hex-Head Plugs	
1/4	1961K22	$55.00	1961K27	$51.00	1961K16	$49.17	1961K11	$57.08

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Stainless Steel Threaded Pipe Outlets

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table; 600 psi @ 220° F for steam
- Pipe: Use threaded Schedule 80 thick-wall stainless steel (see pages 14-15)

Also known as branch connectors, use these to create a threaded outlet anywhere on your pipe. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. Meet MSS SP-97 and ANSI/ASME B16.11.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: NPT.

To Order: Please specify pipe size within the range shown below.

Fits Pipe Size Range	Outlet, Pipe Size	Ht.	Max. psi @ 72° F	Type 304/304L Stainless Steel		Type 316/316L Stainless Steel

Extreme-Pressure Stainless Steel Threaded Pipe Fittings

- Use with water, oil, steam
- Maximum Pressure: See table; steam is rated @ 300° F

Built tough to handle the pressure of nearly any job. Made of Type 316 stainless steel for excellent resistance to heat and corrosion.

Connections: NPTF (Dryseal), unless noted. NPTF threads are compatible with NPT threads.

Elbows, Tees, and Crosses

Meet ASTM A182. The ***90° female×male elbows*** are also known as street elbows.

Pipe Size	90° Elbows, Female Max. psi @ 72° F			90° Elbows, Male Max. psi @ 72° F			90° Elbows, Female×Male Max. psi @ 72° F			45° Elbows, Female×Male Max. psi @ 72° F

Extreme-Pressure Stainless Steel Threaded Adapters

- Use with water, oil, steam
- Maximum Pressure: See table; steam is 3,000 psi @ 300° F

Change the thread configuration in your extreme-pressure pipe system. ***Type 304 stainless steel*** offers very good corrosion resistance. ***Type 316 stainless steel*** offers excellent corrosion resistance.

Connections: BSPP (British Standard Pipe Parallel), NPT, metric, NPTF (Dryseal), or UN/UNF straight threads. Male BSPP threads have a rubber seal bonded to a metal washer; UN/UNF threads have a fluoroelastomer seal.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Precision Extreme-Pressure Stainless Steel Threaded Pipe Fittings

- Use with water, hydraulic oil, natural gas, steam, cryogenic gases (liquid nitrogen), unless noted
- Maximum Pressure: See table; steam is rated @ 300° F, unless noted

While you may know these as instrumentation fittings, we call them precision fittings because they have the most precise threads, tightest tolerances, and highest pressure ratings of all the stainless steel fittings we offer. Plus, the male threads are rolled for extra strength. They're Type 316 stainless steel, which offers excellent resistance to heat and corrosion. Meet ANSI/ASME B1.20.1, B31.1, and B31.3, unless otherwise stated.

Connections: NPT, unless noted.

Elbows, Tees, and Crosses

90° female×male and ***reducing 90° male×female elbows*** are also known as street elbows.

Adapters with a British Standard Connection

All have NPT threads on one end and British standard threads on the other end. BSPT (British Standard Pipe Taper) threads meet ISO 7/1 and BS21. BSPP (British Standard Pipe Parallel) threads meet ISO 228/1, 228/2, and BS2779. The fittings with male BSPP threads include a rubber seal bonded to a metal washer. *Note:* The ends of the fittings that have BSPT and BSPP threads do not meet ANSI/ASME B1.20.1.

Stainless Steel Threaded Locknuts with PTFE Seal

- Use with air, water, oil, natural gas
- Maximum Pressure: See table

A built-in seal eliminates the need for PTFE tape and sealants. Thread one of these locknuts onto the male end of your fitting before making a connection. They are Type 303 stainless steel, which offers very good corrosion resistance. Temperature range is –300° to +500° F.

Connections: NPT.

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thin-Wall Butt-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas
- Pipe: Use unthreaded Schedule 10 thin-wall stainless steel (see page 21)

Choose thin-wall fittings, which are also known as Schedule 10, when you need a fitting that's lighter in weight than standard wall. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet MSS SP-43, ASTM A403/403M, and ANSI/ASME B16.9.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Stub ends are for use with the low-pressure easy-access flanges shown on page 24. ***Reducing couplings*** are also known as concentric reducers.

Connections: Butt weld (unthreaded).

Thin-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas
- Fittings: Use butt-weld Schedule 10 thin-wall stainless steel (see page 20 and above)

Thin walls make this pipe, which is also called Schedule 10, lighter in weight than standard-wall pipe. Furnished unthreaded for welded connections, which are less likely to leak than threaded connections. Pipe has welded construction, so there is a weld bead on the inside. Meets ASTM A312 and ANSI/ASME B36.19.

Pipe comes in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

To Order: Please specify 1-, 3-, or 6-ft. length.

Marine-Rated Butt-Weld Copper-Nickel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas

Other materials may cower to sea water, but not 90/10 copper-nickel—this corrosion-resistant material is tough enough to handle marine applications. Also known as Class 200 fittings and pipe, all proudly carry the military designation of NAVSEA rated. They are unthreaded for a welded connection, which is less likely to leak than a threaded connection.

Pipe has seamless construction for unrestricted flow. Meets MIL-T-16402K. **To Order:** Please specify 1-, 3-, or 6-ft. length. Connections: Butt weld (unthreaded).

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Butt-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see page 23)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

A great choice when you need fittings with thicker walls than thin-wall pipe fittings, yet still want the leak resistance of a welded connection. These fittings, also known as Schedule 40, have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet MSS SP-43, ASTM A403, and ANSI/ASME B16.9. For butt-weld tube fittings, please see page 211.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Stub ends are for use with the low-pressure easy-access flanges shown on page 24. ***Reducing couplings*** are also known as concentric reducers.

Connections: Butt weld (unthreaded).

How to Measure Unthreaded Flanges— *Example shows pipe size 1/2.*

Pipe size is an industry designation, not the actual size. Place your flange on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your flange, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

i To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Stainless Steel Unthreaded Pipe Nipples

- Use with air, water, oil, natural gas
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22) and socket-weld low-pressure stainless steel (see page 26)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

We've cut pipe into short lengths so you won't have to. Also known as Schedule 40 nipples, they have welded construction, so there's a weld bead on the inside. Made of Type 304/304L stainless steel, a low-carbon material that's favorable for welding and offers very good corrosion resistance. Meet ASTM A312.

Pipe Size	1″ Lengths		1 1/2″ Lengths		2″ Lengths		2 1/2″ Lengths		3″ Lengths		4″ Lengths		6″ Lengths

Standard-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22) and socket-weld low-pressure stainless steel (see page 26)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

Also called Schedule 40, this pipe is unthreaded for welded connections, which are less likely to leak than threaded connections.

Pipe comes in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Welded pipe is constructed with a weld bead on the inside. Meets ASTM A312 and ANSI/ASME B36.19.

Seamless pipe has a smooth interior for unrestricted flow. Meets ASTM A312.

To Order: Please specify 1-, 3-, or 6-ft. length.

Low-Pressure Stainless Steel Unthreaded Reducing Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see above)
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22)

A reduced connecting point allows you to transition to a smaller pipe size. These are also known as slip-on style, Class 150, raised-face flanges. You must weld the flange to your pipe on both sides. To connect, bolt one of these forged flanges to your flange (be sure the flange pipe size, flange OD, and number of bolt holes are the same). A gasket is required, but not included; see pages 3474-3480. For bolts, see pages 3146-3147.

Come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Slip on (unthreaded).

How to Measure Unthreaded Flanges— *Example shows pipe size 1/2.*

Pipe size is an industry designation, not the actual size. Place your flange on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your flange, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8"):	0	1/2"	5/8"	3/4"	7/8"	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2 3/8"	2 7/8"	3 1/2"

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Stainless Steel Unthreaded Flanges

- Use with air, water, oil, natural gas
- Maximum Pressure: 150 psi @ 72° F
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see page 23)
- Fittings: Use butt-weld Schedule 40 standard-wall stainless steel (see page 22)

Raised Surface on Back (Forged Flanges, except Easy Access)

Flat Surface on Back (Cast Flanges and Forged Easy Access)

Gain quick access to your pipe by creating a flange connection. Also called Class 150 flanges, they connect by bolting two same-size flanges together with a gasket (not included). For gaskets, see pages 3474-3480; for bolts, see pages 3146-3147.

Forged flanges are also known as ANSI flanges and raised-face flanges. Match with another ANSI flange of the same size for connection. Meet ASTM A182 and ANSI/ASME B16.5, unless noted.

Cast flanges are also called MSS flanges and flat-face flanges. Match with another MSS flange of the same size for connection. Meet ASTM A341; the *caps* also meet MSS SP-42.

Types 304 and ***304/304L stainless steel*** offer very good corrosion resistance for an economical alternative to Types 316 and 316/316L. ***Types 316*** and ***316/316L stainless steel*** contain more nickel and have molybdenum for better resistance to corrosion than Types 304 and 304/304L. *Types 304/304L* and *316/316L stainless steel* are low-carbon materials that are favorable for welding.

Slip On— Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld— An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld— Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access— Commonly called lap-joint flanges. Use these flanges with a stub-end fitting (required, but not included; see page 22). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap— Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Forged Flanges— Raised surface on back, unless noted.

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Butt-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see below)
- Flanges: Use unthreaded high-pressure stainless steel (see page 28)

The strongest butt-weld fittings we offer, these are also known as Schedule 80 fittings. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM A403.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Butt weld (unthreaded).

Thick-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 80 thick-wall stainless steel (see above) and socket-weld high-pressure stainless steel (see pgs. 26-27)
- Flanges: Use unthreaded high-pressure stainless steel (see page 28)

Also known as Schedule 80 pipe, this pipe has thick walls for superior strength and is seamless for unrestricted flow. It comes unthreaded so you can make welded connections, which are less likely to leak than threaded connections. Meets ASTM A312.

Pipe comes in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

To Order: Please specify 1-, 3-, or 6-ft. length.

High-Pressure Stainless Steel Butt-Weld Pipe Outlets

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table; 600 psi @ 220° F for steam
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see above)

Create a tap-off anywhere along your pipe. These outlets are also known as branch connectors. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. Meet MSS SP-97 and ANSI/ASME B16.11.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Butt weld (unthreaded).

To Order: Please specify pipe size within the range shown below.

How to Measure Socket-Weld Unthreaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

Unthreaded Socket-Weld Connection

- Use with air, water, oil, natural gas
- Maximum Pressure: 150 psi @ 72° F
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall stainless steel (see page 23)
- Flanges: Use unthreaded low-pressure stainless steel (see page 24)

You can be sure these are the highest quality Class 150 fittings available because they all meet ANSI/MSS SP-114 for heat treating, material thickness, and marking. They also meet ASTM A351. They have socket ends that support the pipe during installation; slide your pipe into the fitting and you are ready to weld.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304.

Connections: Socket weld (unthreaded).

High-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

Unthreaded Socket-Weld Connection

- Use with air, water, oil, natural gas, steam
- Maximum Pressure:
  Type 304 SS: 2,570 psi @ 72° F; 1,965 psi @ 350° F for steam
- Type 316 SS: 2,915 psi @ 72° F; 1,965 psi @ 350° F for steam
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see page 25)

Also known as Class 3000 fittings, these heavy duty forged fittings stand up to high-pressure applications. They have socket ends that support the pipe during installation; just slide your pipe into the fitting and you are ready to weld. All meet ASTM A182. Meet ANSI/ASME B16.11, except unions and reducing bushings.

Fittings come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Socket weld (unthreaded).

High-Strength Socket-Weld Chrome-Moly Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: Fittings: 2,310 psi @ 72° F; 1,595 psi @ 350° F for steam; Pipe: Not rated

Stronger and easier to weld than stainless steel and steel, choose high-strength chrome-moly F22 fittings and P22 pipe when you need a material that resists scaling, even in steam applications.

Fittings—Also known as Class 3000, these heavy duty fittings have socket ends that support the pipe during installation; slide the pipe into the fittings and you are ready to weld. Meet ANSI/ASME B16.11.

Pipe—Also called Schedule 80 and thick-wall pipe, all have seamless construction for unrestricted flow.

Connections: Socket weld (unthreaded).

Pipe Size	90° Elbows		Couplings		Caps		Pipe 1-ft. Lengths		Pipe 3-ft. Lengths	
1/2	**1982K11**	$20.30	**1982K16**	$10.70	**1982K22**	$10.70	**1982K27**	$32.28	**1982K33**	$91.36

2	**1982K15**	138.50	**1982K21**	83.41	**1982K26**	83.41	**1982K32**	83.08	**1982K37**	216.36

Extreme-Pressure Socket-Weld Stainless Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table
- Pipe: Use unthreaded Schedule 160 extra-thick-wall stainless steel (see pg. 28)

Sometimes only the strongest will do—that's where Class 6000 fittings come in. The heavy duty forged construction gives these fittings the highest pressure rating of all the stainless steel fittings we offer. Fittings have socket ends that support the pipe during installation; slide your pipe into the fitting and you are ready to weld. Meet ASTM A182 and ANSI/ASME B16.11.

Type 304/304L stainless steel offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Connections: Socket weld (unthreaded).

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Unthreaded Pipe and Flanges—*Example shows pipe size 3/8 for pipe, pipe size 1/2 for flanges.*

Pipe size is an industry designation, not the actual size. Place your pipe or flange on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe and butt-weld flange, or inside diameter (ID) of your slip-on, socket-weld, and easy-access flange, then select the pipe size on the scale that corresponds to your measurement.

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Extra-Thick-Wall Stainless Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use socket-weld extreme-pressure stainless steel (see page 27)

The extra-thick-wall construction, which is often called Schedule 160, makes this the strongest stainless steel pipe we offer. Pipe is seamless for unrestricted flow. It comes unthreaded so you can make welded connections, which are less likely to leak than threaded connections. Meets ASTM A312.

Type 304 stainless steel offers very good corrosion resistance for an economical alternative to Type 316. ***Type 316 stainless steel*** contains more nickel and has molybdenum for better corrosion resistance than Type 304.

Pipe Size	1-ft. Lengths		3-ft. Lengths		6-ft. Lengths	
Type 304 Stainless Steel						
1/2	2053K11	$19.46	2053K16	$48.65	2053K22	$81.09

High-Pressure Stainless Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam, unless noted
- Pipe: Use unthreaded Schedule 80 thick-wall stainless steel (see page 25)

Forged for high strength, these heavy duty flanges are often called Class 300, ANSI, and raised-face flanges (except easy-access, which are called flat-face flanges). Bolt two same-size flanges together with a gasket (not included). For gasket, see pages 3474-3480. For bolts, see pages 3146-3147. Flanges meet MSS SP-6 and SP-25, ASTM A182, and ANSI/ASME B16.5, unless noted.

Flanges come in two low-carbon materials that are favorable for welding. ***Type 304/304L stainless steel*** offers very good corrosion resistance for an economical alternative to Type 316/316L. ***Type 316/316L stainless steel*** contains more nickel and has molybdenum for better resistance to corrosion than Type 304/304L.

Slip On— Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld— An internal stop supports pipe when welding and prevents it from sliding all the way through.

Butt Weld— Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access— Commonly called lap-joint flanges. Use these flanges with a stub-end fitting (required, but not included; see page 22). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap— Also known as blind flanges, use these solid flanges to close off the end of a pipe.

♠ Does not meet ANSI/ASME B16.5 and is not rated for steam.

How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Brass Threaded Pipe Fittings with Sealant

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see below and page 32)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31)

You don't need to search for your thread sealant—it is already applied to the male threads. Also known as Class 125 fittings, they meet ASTM B584 or B927, as well as ANSI/ASME B16.15 and B1.20.1.

90° female×male elbows are also known as street elbows.

Connections: NPT.

Standard-Wall Brass Threaded Pipe Nipples with Sealant

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure brass (see above and pages 30-31)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31)

The thread sealant is already applied, so these nipples are ready to get to work. Also known as Schedule 40 threaded nipples and regular nipples, they have seamless construction for unrestricted flow. They meet ASTM B687.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8"):	0	1/4"	3/8"	1/2"	5/8"	3/4"	1"	1 1/4"	1 5/8"	1 3/4"	2 3/8"	2 3/4"	3 3/8"

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Brass Threaded Pipe Fittings

- Use with air, drinking (potable) water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see pages 29 and 32)

All of these low-pressure fittings, also known as Class 125 fittings, are NSF 61 certified for use with drinking (potable) water in all 50 states as of January 1, 2011. They also meet ASTM B584 or B927, as well as ANSI/ASME B16.15 and B1.20.1, except flanges and where noted.

The ***90° female × male elbows*** are also called street elbows. ***Reducing bushings*** are also known as face bushings.

Connections: NPT, except locknuts have NPSL (National Pipe Straight Locknut) threads, which are compatible with NPT threads.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Flanges

Also known as Class 150 flanges, these have a flat surface on the back. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. They meet ANSI/ASME B16.24. For gaskets, see pages 3474-3480; for bolts, see page 3152.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.		
1/2	3 1/2″	4	1/2″	4429K551	$92.97

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Brass Threaded Pipe Nipples and Pipe CAD

Fully Threaded

Threaded on Both Ends

- Use with air, drinking (potable) water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure brass (see pages 29-31)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31)

Our threaded brass nipples and pipe are also known as Schedule 40 and regular nipples and pipe. All are NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2011. They have seamless construction for unrestricted flow. All meet ASTM B687.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Chrome-Plated Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples: Use threaded Schedule 40 standard-wall chrome-plated brass (see below)

The polished chrome plating not only looks great but also improves corrosion resistance. Commonly called Class 125, these brass fittings meet ASTM B456. They also meet ASTM B584 or B16 (except reducing bushings), as well as ANSI/ASME B16.15 (except unions and locknuts).

The ***90° female×male elbows*** are also known as street elbows. ***Square-head plugs*** are solid. ***Reducing bushings*** are also known as face bushings.

Connections: NPT.

Standard-Wall Chrome-Plated Brass Threaded Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure chrome-plated brass (see above)

Also known as Schedule 40 and regular nipples, these are brass with a polished chrome plating that provides extra corrosion resistance. They are threaded and have seamless construction for unrestricted flow. Meet ASTM B43, B456, and B687.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Thick-Wall Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 400 psi @ 72° F; 250 psi @ 400° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see pages 29 and 32) or threaded Schedule 80 thick-wall brass (see below)

Also known as Class 250 fittings, these threaded brass fittings have thicker walls to withstand higher pressures than the low-pressure fittings on pages 30-31. All meet ASTM B584, as well as ANSI/ASME B.16.15 and B1.20.1.

Connections: NPT.

Thick-Wall Brass Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 250 low-pressure brass (see above)

You may know these as Schedule 80 and extra-heavy pipe nipples and pipe—they have thicker walls than standard-wall pipe to handle high-pressure applications. All have seamless construction for unrestricted flow. Meet ASTM B43. Lengths up to 12″ also meet ASTM B687 and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Plated Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: 1,000 psi @ 72° F

Plating offers more than just good looks—it also provides longer life in corrosive environments than unplated brass.

The ***90° female × male elbows*** are also called street elbows. ***Hex-head plugs*** and ***hex-socket plugs*** are hollow. ***Fully threaded nipples*** are also called close nipples; they are threaded on each end to the center.

Nickel plating has better corrosion resistance than unplated brass. ***Black zinc plating*** has a shiny finish that offers more corrosion resistance than nickel plating and stands up to salt spray applications. ***Chrome plating*** is applied over a nickel base coat, giving these fittings a mirror-like finish that has better corrosion resistance than nickel- and black-plated fittings. **To Order:** Please specify nickel, black, or chrome plating.

Connections: NPTF (Dryseal), which are compatible with NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: 1,000 psi @ 72° F

A great choice when you want brass fittings that can handle moderate pressure, but you don't want to break the bank.

90° female×male elbows are also called street elbows. ***Reducing bushings*** are also called face bushings. ***Through-wall couplings*** are also called bulkhead fittings and panel-mount couplings; they include a nut and a lockwasher. ***Fully threaded nipples***, also called close nipples, are threaded on each end to the center.

Connections: NPT.

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Medium-Pressure Nickel-Plated Brass Pipe Fittings

- Use with air and water
- Maximum Pressure: See table

Use these fittings for an easy connection to other British Standard threads. All are nickel-plated brass (unless noted), which offers more resistance to corrosion than unplated brass. Meet ISO 7.1 and ISO 228 Class A, (unless noted).

90° female × male elbows are also called street elbows. ***Hex-socket plugs*** are solid.

Connections: BSPP (British Standard Pipe Parallel) or BSPT (British Standard Pipe Taper). The male BSPP threads have a rubber seal bonded to a metal washer.

British Standard Threaded Medium-Pressure Brass Pipe Fittings

- Use with air and water
- Maximum Pressure: See table

Take the challenge out of connecting different thread styles. All are brass and meet ISO 7.1 and ISO 228 Class A.

Hex-head plugs are hollow.

Connections: BSPT (British Standard Pipe Taper), BSPP (British Standard Pipe Parallel), or NPT.

High-Pressure Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: See table

Not your average brass pipe fittings—these have the strength to handle high-pressure applications. All meet SAE J476 and ANSI/ASME B1.20.3; they also meet ASTM B16 and B453, or ASTM B124.

90° female×male elbows are also known as street elbows. ***Hex-head plugs*** are hollow, except the 1/8 pipe size is solid.

Connections: NPTF (Dryseal), which are compatible with NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Precision High-Pressure Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam, oxygen, nitrogen, argon
- Maximum Pressure: See table; 1,560 psi @ 300° F for steam

Also called instrumentation fittings, precision fittings have the most precise threads and tightest tolerances of all the brass fittings we offer. Plus, the male threads are rolled for extra strength. All have extra-strong forged or bar stock construction to handle high-pressure applications. Meet ANSI/ASME B1.20.1, B31.1, and B31.3.

Connections: NPT, BSPT (British Standard Pipe Taper), or BSPP (British Standard Pipe Parallel).

Elbows, Tees, and Crosses

90° female × male elbows are also known as street elbows.

90° Elbows, Female

Pipe Size	Max. psi @ 72° F

1/2	2,400	9171K174	32.14
3/4	2,300	9171K175	45.34

Easy-Install Brass Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 1,000 psi @ 72° F; 1,000 psi @ 250° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall brass (see pages 29 and 32)

Keep your pipe wrench in your tool chest—you can install and remove these brass fittings with your socket wrench or hex key. And because they're compact, they require less clearance than traditional elbows.

Connections: NPTF (Dryseal), which is compatible with NPT.

Socket-Wrench Elbows

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Miniature Brass Threaded Pipe Fittings

- Use with air and water
- Maximum Pressure: See table

At less than an inch long, you won't find a better fitting for your miniature pipe system. ***Nickel-plated brass*** fittings offer better corrosion resistance than unplated brass. For miniature brass barbed fittings, see page 164.

Swivel elbows, ***swivel tees***, and ***swivel adapters*** rotate 360° for tightening in confined spaces.

Connections: UN/UNF (10-32 straight thread size) and NPT (1/16, 1/8, and 1/4 pipe sizes). Male ends with 10-32 thread size have a Buna-N gasket, except the through-wall couplings where all have a locknut and washer. **Also Available:** Replacement Buna-N gaskets in packages of 25; please ask for 5454K21.

Super-Corrosion-Resistant Copper-Nickel Threaded Pipe Fittings

- Use with air, water, oil, natural gas
- Maximum Pressure: Fittings: 400 psi @ 72° F; 200 psi @ 425° F for steam; Pipe Nipples: Not rated

Need a pipe fitting that can stand up to salt water better than brass? Our corrosion-resistant 90/10 copper-nickel has what it takes to handle marine applications.

Elbows and ***tees*** meet ANSI/ASME B16.3.

Fully threaded nipples are also called Schedule 40, standard-wall, and close nipples; they are threaded on each end to the center. All have seamless construction for unrestricted flow. Meet ASTM B466 and B1.20.1.

Connections: NPT.

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Low-Pressure Bronze Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 125 psi @ 400° F for steam
- Pipe Nipples: Use British Standard threaded Schedule 40 standard-wall brass (see below)

BSPT threads on these fittings and flanges allow easy connection to other BSPT threads. Also known as Class 125 fittings or Class 150 flanges, they're made of bronze, which is compatible with brass. All meet ASTM B584. They also meet ANSI/ASME B16.15, except unions and flanges. The threads meet BS21.

Connections: BSPT (British Standard Pipe Taper).

British Standard Threaded Brass Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings and Flanges: Use British Standard threaded low-pressure bronze (see above)

Connect BSPT threads to other BSPT threads or adapt BSPT threads to NPT threads. They're also known as Schedule 40, standard-wall, and regular pipe nipples. They have seamless construction for unrestricted flow. Meet ASTM B687. The BSPT threads also meet BS21; NPT threads also meet ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: BSPT (British Standard Pipe Taper) or NPT.

How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Socket-End Bronze Unthreaded Pipe Fittings

Unthreaded Socket-End Connection

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 200 psi @ 72° F; 200 psi @ 425° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall brass (see below)

You may know these as Silbraze fittings—snap a silver ring (required, sold separately) into the fitting and braze them to your brass pipe for a strong, leak-resistant connection. These fittings have socket ends that support the pipe during installation. They are made of bronze, which is compatible with brass. Meet MIL-F-1183.

Connections: Socket end (unthreaded).

Standard-Wall Brass Threaded-On-One-End Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure brass (see pages 29-31) and socket-weld bronze (see above)
- Flanges: Use threaded Class 150 low-pressure brass (see page 31) and socket-weld bronze (see above)

One end of these Schedule 40 nipples is threaded, while the other is unthreaded. They're brass and have seamless construction for unrestricted flow. Meet ASTM B687.

Connections: NPT on one end; unthreaded on the other end.

Pipe Size	1″ Lengths		1 1/2″ Lengths		2″ Lengths		3″ Lengths		4″ Lengths

Standard-Wall Brass Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings and Flanges: Use socket-weld bronze (see above)

Also called Schedule 40 and regular pipe, this brass pipe has seamless construction for unrestricted flow. It's unthreaded for brazed connections, which are less likely to leak than threaded connections. Meet ASTM B43.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size		1 ft.	3 ft.	6 ft.
1/8	4501K11	$6.11	$16.88	$29.10

How to Measure Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
OD (to nearest 1/8″): 0 1/4″ 3/8″ 1/2″ 5/8″ 3/4″ 1″ 1 1/4″

Pipe Size: 0 1/16 1/8 1/4 3/8 1/2 3/4 1
ID (to nearest 1/8″): 0 1/4″ 3/8″ 1/2″ 5/8″ 3/4″ 1″ 1 1/4″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Aluminum Threaded Pipe Fittings

- Use with air, water, oil
- Maximum Pressure: 500 psi @ 72° F

A blue anodized finish on these aluminum fittings provides more corrosion resistance and a harder surface than plain aluminum.

90° female×male elbows are also known as street elbows.

Connections: NPT.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows, Female×Male		Tees		Hex Couplings		Hex Nipples	
1/8	3861T11	$17.54	3861T21	$17.54	3861T41	$17.54	3861T51	$17.54	3861T61	$4.12	3861T81	$3.08
1/4	3861T12	20.53	3861T22	20.53	3861T42	20.53	3861T52	20.53	3861T62	4.72	3861T82	4.72
3/8	3861T13	29.51	3861T23	29.51	3861T43	29.51	3861T53	29.51	3861T63	7.89	3861T83	8.22
1/2	3861T14	34.78	3861T24	29.51	3861T44	29.51	3861T54	35.92	3861T64	12.84	3861T84	10.62

High-Pressure Aluminum Threaded Pipe Fittings

- Use with air and water
- Maximum Pressure: 3,000 psi @ 72° F, except unions are 1,500 psi @ 72° F
- Pipe Nipples: Use threaded Schedule 80 thick-wall aluminum (see below)

Don't let the light weight fool you—these aluminum fittings have super-strong forged or bar stock construction for the highest pressure ratings of all the aluminum fittings we offer. They're also known as Class 3000 fittings. All meet Fed. Spec. QQ-A-200/8 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.11, except wyes and unions.

Connections: NPT.

Elbows, Wyes, Tees, and Crosses

All meet ASTM B247. The ***90° female×male elbows*** are also known as street elbows.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows		Wyes		Tees		Crosses	
1/4	3867T11	$16.39	3867T31	$40.96	3867T21	$19.65	3867T15	$43.84	3867T41	$19.67	3867T25	$40.96

1	3/4	3867T94	43.85

Thick-Wall Aluminum Threaded Pipe Nipples

- Use with air, water, oil
- Fittings: Use threaded Class 3000 high-pressure aluminum (see above)

Also known as Schedule 80 nipples, these are made of aluminum for a high strength-to-weight ratio. They have seamless construction for unrestricted flow. Meet ASTM B241 and ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

FULLY THREADED

Pipe Size	Lg.		
1/4	7/8″	2155K11	$3.19

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Aluminum Threaded Pipe Fittings CAD

- Use with air, water, oil
- Maximum Pressure: 150 psi @ 72° F for fittings; 125 psi @ 72° F for flanges
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall aluminum (see page 48)

The lightweight champion of low-pressure pipelines, aluminum offers a high strength-to-weight ratio along with excellent corrosion resistance. For best performance, do not tighten more than a 1/4-turn past hand tight.

Connections: NPT, except locknuts are NPSL (National Pipe Straight Locknut); NPSL threads are compatible with NPT threads.

Fittings

Also known as Class 150 fittings. The ***90° female×male elbows*** are also called street elbows. ***Half couplings*** are partially threaded; one end has an unthreaded portion that can be welded. ***Square-head plugs*** and ***square-socket plugs*** are solid.

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Aluminum Threaded Pipe Fittings

(Continued from previous page)

Fittings (Cont.)

Reducing 90° Elbows

Pipe Size (A)	Pipe Size (B)		
1/2	1/4	44705K424	$8.91
1/2	3/8	44705K425	8.91
3/4	1/2	44705K426	12.94
1	1/2	44705K427	17.92
1	3/4	44705K428	17.92
1 1/4	1	44705K429	22.80
1 1/2	1	44705K431	$26.88
1 1/2	1 1/4	44705K432	26.88
2	1 1/2	44705K433	47.01
3	2	44705K434	102.26
3	2 1/2	44705K435	102.26
4	3	44705K436	174.82

Reducing Couplings

Pipe Size (A)	Pipe Size (B)		
1/4	1/8	44705K269	$6.06
3/8	1/8	44705K391	6.66
3/8	1/4	44705K271	6.66
1/2	1/4	44705K392	7.31
1/2	3/8	44705K272	7.31

1 1/2	1	44705K471	35.46
1 1/2	2	44705K472	35.46
2	3/4	44705K474	59.86
2	1	44705K475	59.86
3	2	44705K476	152.97
4	2	44705K477	242.47

Flanges

Pipe Sizes 1/2 to 2 1/2

Pipe Sizes 3 to 6

Also known as Class 125 flanges. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. The surface on the back is flat. Flanges in pipe sizes 1 and larger meet ANSI/ASME B16.1. For gaskets, see pages 3474-3480; for bolts, see page 3151.

Pipe Size	Flange OD	Bolts Required Qty.	Bolts Required Dia.		
1/2	3 1/2″	4	1/2″	44705K228	$13.68
3/4	3 7/8″	4	1/2″	44705K229	15.07
1	4 1/4″	4	1/2″	44705K231	15.82

1 1/2	5″	4	1/2″	44705K233	25.33
2	6″	4	5/8″	44705K234	$33.79
2 1/2	7″	4	5/8″	44705K235	42.37
3	7 1/2″	4	5/8″	44705K236	46.61
4	9″	8	5/8″	44705K238	65.57
6	11″	8	3/4″	44705K437	99.03

British Standard Threaded Low-Pressure Aluminum Pipe Fittings

- Use with air, water, oil
- Maximum Pressure: 150 psi @ 72° F

The BSPT threads on these lightweight aluminum fittings allow easy connection to other BSPT threads. For best performance, do not tighten more than a 1/4-turn past hand tight.

90° female×male elbows are also known as street elbows. ***Square-head plugs*** are solid.

Connections: BSPT (British Standard Pipe Taper).

Also Available: Pipe nipples with BSPT threads on one end and NPT threads on the other. For fully threaded nipples, which are also called close nipples, please ask for 2744K1 and specify pipe size from the list below. For nipples that are threaded on both ends, please ask for 2744K2 and specify pipe size from the list below and nipple length: 1 1/2″, 2″, or 3″.

Pipe Size	90° Elbows		90° Elbows, Female×Male		Tees		Couplings		Square-Head Plugs

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Aluminum Threaded Pipe Nipples and Pipe CAD

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil
- Fittings: Use threaded Class 150 low-pressure aluminum (see pages 46-47)
- Flanges: Use threaded low-pressure aluminum (see page 47)

They're so light, it's hard to believe these are Schedule 40 nipples and pipe. They're made of aluminum, which offers a high strength-to-weight ratio and very good corrosion resistance. They have seamless construction for unrestricted flow. Meet ASTM B241.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

FULLY THREADED

How to Measure Unthreaded Pipe and Butt-Weld Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thin-Wall Quick-Weld Aluminum Unthreaded Pipe Fittings

Unthreaded Quick-Weld Connection

- Use with air, water, oil
- Pipe: Use unthreaded Schedule 10 thin-wall aluminum (see below)

Often called bell-end fittings, these are made of 6061 or 6063 aluminum and have bell-shaped ends that support the pipe for quicker and easier welding than butt-weld fittings. Meet ASTM B361.

Couplings are designed to slip over pipe, so they do not have bell-shaped ends. Connections: Quick weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows (C)		45° Elbows		Tees		Couplings

Thin-Wall Butt-Weld Aluminum Unthreaded Pipe Fittings

- Use with air, water, oil

Commonly called Schedule 10, here are the thinnest and lightest aluminum fittings and pipe we offer. All are unthreaded so you can make welded connections, which are less likely to leak than threaded connections.

Elbows and ***reducing couplings*** are 6061 aluminum and have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM B361 and ANSI/ASME B16.9. *Reducing couplings* are also called concentric reducers.

Pipe is 6061 or 6063 aluminum and has seamless construction for unrestricted flow. Meets ASTM B241. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Connections: Butt weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows (C)		45° Elbows

Standard-Wall Butt-Weld Aluminum Unthreaded Pipe Fittings

- Use with air, water, oil
- Pipe: Use unthreaded Schedule 40 standard-wall aluminum (see page 50)
- Flanges: Use unthreaded low-pressure aluminum (see page 50)

Choose these fittings when you need thicker walls than the thin-wall fittings, yet still want the leak resistance of a welded connection. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. All are 6061 aluminum and meet ANSI/ASME B16.9.

Reducing couplings are also called concentric reducers.

Connections: Butt weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows (C)		45° Elbows		Tees		Caps

How to Measure Unthreaded Pipe and Flanges—*Example shows pipe size 3/8 for pipe, pipe size 1/2 for flanges.*

Pipe size is an industry designation, not the actual size. Place your pipe or flange on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe and butt-weld flange, or inside diameter (ID) of your slip-on flange, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC.** For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Aluminum Unthreaded Pipe CAD

- Use with air, water, oil
- Fittings: Use butt-weld Schedule 40 standard-wall aluminum (see pg. 49)
- Flanges: Use unthreaded low-pressure aluminum (see below)

Also known as Schedule 40, this is the most popular style of pipe. This 6061 aluminum pipe is unthreaded so you can make welded connections, which are less likely to leak than threaded connections. It has seamless construction for unrestricted flow. Meets ASTM B241.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size		1 ft.	3 ft.	6 ft.
1/8	5038K151	$6.30	$14.54	$24.23
1/4	5038K161	7.09	16.36	27.27
3/8	5038K171	14.54	33.55	55.91
1/2	5038K181	16.73	38.60	64.33
3/4	5038K221	$17.82	$41.13	$68.55
1	5038K261	19.92	42.68	71.14
1 1/4	5038K271	20.95	48.35	80.59
1 1/2	5038K281	23.96	55.30	92.17
2	5038K321	$30.75	$70.95	$118.25
2 1/2	5038K331	47.43	85.69	153.01

4	5038K351	84.47	152.60	272.50

Low-Pressure Aluminum Unthreaded Flanges CAD

- Use with air, water, oil
- Maximum Pressure: 150 psi @ 72° F
- Pipe: Use unthreaded Schedule 40 standard-wall aluminum (see above)
- Fittings: Use butt-weld Schedule 40 standard-wall aluminum (see page 49)

Aluminum flanges, which are also known as Class 125, allow easy access to your pipe. Bolt two same-size flanges together with a gasket (not included). They're made of 356 aluminum and have a flat surface on back. Flanges meet the dimensional requirements of ANSI/ASME B16.1. For gaskets, see pages 3474-3480; for bolts, see page 3151.

Slip On— Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Butt Weld— Also known as weld-neck flanges. Butt up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Cap— Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Pipe Size	Flange OD	Bolts Required Qty.	Bolts Required Dia.	Slip On		Butt Weld		Cap	
1/2	3 1/2"	4	1/2"	44705K37	$13.68	44705K543	$30.94	44705K531	$18.62

Thick-Wall Butt-Weld Aluminum Unthreaded Pipe Fittings CAD

- Use with air, water, oil

The thick walls, which are also known as Schedule 80, ensure you're getting the strongest unthreaded aluminum fittings and pipe we offer. All are made of 6061 aluminum.

Elbows, ***tees***, and ***reducing couplings*** have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM B361 and ANSI/ASME B16.9. The *reducing couplings* are also called concentric reducers.

Pipe has seamless construction for unrestricted flow. **To Order:** Please specify 1-, 3-, or 6-ft. length.

Connections: Butt weld (unthreaded).

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

FM-Approved Low-Pressure Black Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 125 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see pg. 56)

A strike of a hammer is all it takes to break open a water line in an emergency. Also called Class 125, these black cast iron fittings are a great choice for fire protection applications because they're more brittle than malleable iron and steel fittings. All are FM approved, UL and C-UL listed, and meet ASTM A126 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.4 or B16.14, except off-center reducing couplings. They can be used interchangeably with black malleable iron and black steel.

Off-center reducing couplings, also called eccentric reducers, connect one pipe to another of a smaller diameter with the centers offset.

Connections: NPT.

Low-Pressure Black Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 125 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see page 56)

Also known as Class 125, these fittings are made of black cast iron and can be used interchangeably with black malleable iron and black steel; however, cast iron is the most brittle of the three. Fittings are UL listed and meet ASTM A126 and ANSI/ASME B1.20.1; they also meet ANSI/ASME B16.4 or B16.14.

Square-head plugs are hollow; ***square-socket plugs*** are solid.

Connections: NPT.

Low-Pressure Steel Threaded Pipe Plugs with Magnet

- Use with air, water, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 250° F for steam

A bar or disc magnet is bonded to one end of these steel plugs to grab metal shavings before they become a problem. Plugs are solid.

Connections: ***Square-head*** and ***hex-socket plugs*** have NPTF (Dryseal) threads, which are compatible with NPT threads. ***Hex-head plugs*** have metric straight threads.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Black Iron and Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see pg. 56)

A popular choice for low-pressure plumbing applications, these Class 150 fittings are black malleable iron or black steel. They can be used interchangeably with low-pressure black cast iron.

Connections: NPT or NPT compatible. The fittings with NPT-compatible threads are fully threaded couplings in pipe sizes 1/8-2, which have NPSC (National Pipe Straight Coupling) threads, and locknuts, which have NPSL (National Pipe Straight Locknut) threads.

Elbows, Wyes, Tees, Crosses, Unions, Couplings, and Adapters

UL listed (unless noted) and meet ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.3 or B16.39, except adapters. The ***90° female × male elbows*** are also known as street elbows. ***180° bends*** are also called U-bends. ***Unions*** have a brass seal, which is also called a seat, that conforms to uneven surfaces. ***Couplings*** are threaded on each end with an unthreaded space in the middle.

(Continued on following page)

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Black Iron and Steel Threaded Pipe Fittings

(Continued from previous page)

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see pages 55-56)
- Flanges: Use threaded low-pressure black iron and steel (see pg. 56)

A popular choice for low-pressure plumbing applications, these Class 150 fittings are black malleable iron or black steel. They can be used interchangeably with low-pressure black cast iron.

Connections: NPT for all of the fittings listed below.

Reducing Elbows and Couplings

All are UL listed and meet ANSI/ASME B16.3 and B1.20.1. ***90° female × male elbows*** are also known as street elbows.

Standard-Wall Steel Threaded Pipe Nipple Assortments

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pg. 52-above)
- Flanges: Use threaded low-pressure black iron and steel (see page 56)

Each assortment includes a range of different pipe nipple lengths in both fully threaded and threaded-on-both-ends styles. All meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they're threaded on each end to the center and vary in length from 7/8″ to 2″ depending on the pipe size.

Galvanized steel offers better corrosion resistance than black steel.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Black Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pages 52-54)
- Flanges: Use threaded low-pressure black iron and steel (see page 56)

Black steel is the most popular choice for pipe nipples and pipe in low-pressure plumbing applications. Also known as Schedule 40, all have a welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Black Steel Threaded-On-One-End Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pages 52-54)
- Flanges: Use threaded low-pressure black iron and steel (see below)

Turn to these nipples and pipe when you need a threaded connection on one end and an unthreaded connection on the other. Also known as Schedule 40, they are made of black steel, which is the most common material for low-pressure plumbing applications. All have welded construction, so there's a weld bead on the inside. They meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Connections: NPT on one end, unthreaded on the other end.

Low-Pressure Black Iron and Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure:
  Steel: 150 psi @ 72° F; 150 psi @ 350° F for steam
  Iron: 125 psi @ 72° F; 125 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall black steel (see page 55 and above)
- Fittings: Use threaded Class 125 low-pressure black iron (see page 51) or threaded Class 150 low-pressure black iron and steel (see pages 52-54)

A flange connection allows easy access to your pipe. Bolt two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3474. For gaskets, see pages 3474-3480; for bolts, see pages 3140-3142.

Steel flanges are forged for extra strength. Also called raised-face flanges, they have a raised surface on the back. Meet MSS SP-25, ASTM A105, and ANSI/ASME B16.1.

Iron flanges are brittle, so they can be quickly opened in a fire emergency with the strike of a sledge hammer. Also known as flat-face flanges, these have a flat surface on the back. They're FM approved and meet ASTM A126, as well as ANSI/ASME B16.1 and B1.20.1. They are also UL listed, except the flange in 3/4 pipe size.

Connections: NPT.

Pipe Nipples and Couplings with Right-Hand and Left-Hand Threads

- Use with air, water, oil, natural gas, steam

Threads run clockwise (right hand) on one end and counterclockwise (left hand) on the other. When you use your wrench to turn, connections on both ends draw in at the same time.

Pipe nipples are also known as right/left pipe nipples and Schedule 40 pipe nipples. They're made of steel and have welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Couplings are malleable iron. Meet ASTM A197, as well as ANSI/ASME B16.3 and B1.20.1.

Connections: NPT.

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard Threaded Low-Pressure Iron Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72°F; 150 psi @ 366°F for steam
- Pipe Nipples: Use British standard threaded Schedule 40 standard-wall steel (see below)

Also known as Class 150, these malleable iron fittings have BSPT threads for connecting to BSPT pipe. They come in your choice of black iron, which is the most popular material for low-pressure plumbing applications, and galvanized iron for increased corrosion resistance. They meet ASTM A197 and EN 10226.

Unions have a brass seal, which is also called a seat, that conforms to uneven surfaces. ***Square-head plugs*** are hollow. ***BSPT×NPT adapters*** allow you to connect BSPT threads to NPT threads. The end with BSPT threads meets ASME BS21 and is marked with paint. The end with NPT threads meets ANSI/ASME B1.20.1.

Connections: BSPT (British Standard Pipe Taper); adapters also have NPT threads on one end.

British Standard Threaded Steel Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use British standard threaded Class 150 low-pressure iron (see above)

BSPT threads on both ends allow quick connections to BSPT fittings. Also called Schedule 40, these nipples are black steel. They have welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as EN 10226.

Fully threaded nipples are also called close nipples.

Connections: BSPT (British Standard Pipe Taper).

Also Available: Galvanized steel nipples, which offer increased corrosion resistance over black steel. Please ask for 4859K1 and specify nipple style (fully threaded or threaded on both ends), pipe size, and length from the choices below.

Fully Threaded

Threaded on Both Ends

FULLY THREADED

Pipe Size	Lg.

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Galvanized Iron and Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Galvanizing provides the extra rust and corrosion resistance you need. Also known as Class 150, these fittings are malleable iron or steel and can be used interchangeably with low-pressure zinc-plated iron.

Connections: NPT or NPT compatible. The fittings with NPT-compatible threads are fully threaded couplings in pipe sizes 1/8-2, which have NPSC (National Pipe Straight Coupling) threads, and locknuts, which have NPSL (National Pipe Straight Locknut) threads.

Elbows, Wyes, Tees, Crosses, Unions, Couplings, and Adapters

UL listed (unless noted) and meet ASTM A197 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.3 or B16.39, except adapters. The ***90° female×male elbows*** are also known as street elbows. ***180° bends*** are also called U-bends. ***Unions*** have a brass or copper seal, which is also called a seat, that conforms to uneven surfaces. ***Couplings*** are threaded on each end with an unthreaded space in the middle.

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Female Threaded Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Galvanized Iron and Steel Threaded Pipe Fittings

(Continued from previous page)

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam, except locknuts
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Galvanizing provides the extra rust and corrosion resistance you need. Also known as Class 150, these fittings are malleable iron or steel and can be used interchangeably with low-pressure zinc-plated iron.

Connections: NPT for all of the fittings listed below.

Reducing Elbows and Couplings

All are UL listed and meet ASTM A153, as well as ANSI/ASME B16.3 and B1.20.1. The ***90° female×male elbows*** are also known as street elbows.

90° Reducing Elbows

Low-Pressure Zinc-Plated Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 125 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 61)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Zinc plating on these cast iron fittings provides better rust and corrosion resistance than you'll get with black iron and steel. Also called Class 125 fittings, they can be used interchangeably with galvanized iron and steel. They're UL listed and meet ASTM A126 and ANSI/ASME B1.20.1; they also meet ANSI/ASME B16.4 or B16.14.

Square-head plugs are hollow; ***square-socket plugs*** are solid.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Galvanized Steel Threaded Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 150 low-pressure galvanized iron and steel (see pages 58-60)
- Flanges: Use threaded low-pressure galvanized steel (see page 62)

Galvanized steel pipe nipples and pipe provide very good corrosion resistance in low-pressure plumbing applications. Also known as Schedule 40, all have welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Low-Pressure Zinc-Plated Steel Threaded Pipe Fittings with Sealant

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 366° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 58)
- Flanges: Use threaded low-pressure galvanized steel (see below)

Save yourself the time and trouble it takes to apply sealant—these fittings come with it already applied to the male threads. Also known as Class 150, they have a zinc-plated finish for extra protection from corrosion.

Plugs are solid and meet SAE J531. ***Hex reducing bushings*** meet ANSI/ASME B16.14.

Connections: NPTF (Dryseal), which are compatible with NPT threads.

Pipe Size	Square-Head Plugs		Square-Socket Plugs		Hex-Socket Plugs: Hex Key Size		
1/8	1162T31	$0.28	1162T44	$0.23	3/16″	1162T37	$0.23
1/4	1162T32	.37	1162T45	.31	1/4″	1162T38	.31

1/2	1/4	1162T53	1.96
1/2	3/8	1162T54	1.96
3/4	1/4	1162T55	2.97
3/4	1/2	1162T56	2.97

Low-Pressure Galvanized Steel Threaded Flanges

Raised Surface on Back

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 40 standard-wall galvanized steel (see page 58)
- Fittings: Use threaded Class 150 low-pressure galvanized iron and steel (see pages 58-60)

Galvanized for extra protection from corrosion, these steel flanges are also known as Class 150. Use them to create easy access to your pipe by bolting two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3474. For gaskets, see pages 3474-3480; for bolts, see pages 3140-3142. Flanges meet ASTM A105 and A123, as well as ANSI/ASME B16.5.

Connections: NPT.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.

8	13 1/2″	8	3/4″	7551K133	216.39

Standard-Wall Threaded Pipe Nipples for Joining Dissimilar Metals

- Use in water applications where copper meets iron or steel
- Maximum Pressure: 150 psi @ 72° F
- Maximum Temperature: 180° F

A nonconductive plastic sleeve prevents destructive electrolytic corrosion (the electrical current generated between dissimilar metals that causes corrosion) when connecting different metals. Made of galvanized steel, these threaded nipples have welded construction, so there's a weld bead on the inside. Not for use in heating systems that use hot liquids or gas. Meet ANSI/ASME B1.20.1.

Connections: NPT.

Note: When connecting iron pipe to copper tube, use a socket-end to pipe adapter (see 5520K21 to K26 on page 217).

Pipe Size	Lg.		
1/2	3″	7819K41	$4.66
3/4	3″	7819K42	3.29

1 1/4	4″	7819K44	12.42
1 1/2	4″	7819K45	15.46
2	4″	7819K46	21.55

Medium-Pressure Threaded Pipe Unions for Joining Dissimilar Metals

- Use with air, water, oil, natural gas
- Maximum Pressure: 250 psi @ 72° F
- Maximum Temperature: 180° F

Need to connect different metals in your piping or plumbing system? These unions have a Buna-N gasket with a plastic insulator that inhibits destructive electrolytic corrosion (electrical current generated between dissimilar metals that causes corrosion).

Connections: NPT (threaded) or female solder (tube).

Female Threaded End×Female Solder End

Pipe Size (A)	Tube Size (B)♣	Actual Tube OD		
Iron to Copper				
1/2	1/2″	5/8″	4838K1	$7.42

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Medium-Pressure Iron Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 550° F for steam, except unions are 230 psi @ 550° F
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall steel (see pages 64-65)
- Flanges: Use threaded medium-pressure steel (see page 67)

Also known as Class 300 pipe fittings, these black malleable iron fittings have thicker walls than low-pressure fittings, so they can withstand higher pressures. They are UL listed and meet ANSI/ASME B.1.20.1. They also meet ASTM A126 or A197, as well as ANSI/ASME B16.3, B16.14, or B16.39.

90° female×male elbows are also known as street elbows.

Connections: NPT.

Easy-Alignment Steel Threaded Pipe Couplings

- Use with air, water, oil, natural gas
- Maximum Pressure: 300 psi @ 72° F
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall steel (see pages 64-65) and threaded Schedule 160 extra-thick-wall steel or galvanized steel (see pages 67-68)

Each end has a short unthreaded space before the threads start—this space acts as a pilot when threading onto long lengths of pipe. Also known as API (American Petroleum Institute) line couplings, they meet API 5-L standards, as well as ASTM A53 and A105.

Galvanized steel offers better corrosion resistance than black steel.

Connections: NPT.

Pipe Size	Black Steel		Galvanized Steel	
1/8	43245K121	$4.42	43245K361	$4.76
1/4	43245K122	5.79	43245K362	6.24
3/8	43245K123	6.29	43245K363	6.92

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Smooth-Flow Steel Threaded Reducing Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

The walls reduce gradually to provide smoother flow than other types of reducing connections. Also called swage nipples and Schedule 80 nipples, they're zinc-plated steel and have seamless construction for unrestricted flow. They meet MSS SP-95, ASTM A234-WPB, and ANSI/ASME B1.20.1.

Connections: NPT.

Pipe Size (A)	(B)	Lg.

Thick-Wall Welded Steel Threaded Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

Also known as Schedule 80 nipples and pipe, these are made of black steel, which is the most popular material for low-pressure plumbing applications. All have a welded construction, so there's a weld bead on the inside. Meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Seamless Steel Threaded Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

Seamless construction provides unrestricted flow. Also known as Schedule 80, these nipples and pipe are made of black steel, which is the most popular material for low-pressure plumbing applications. Meet ASTM A53, A106, and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Thick-Wall Steel Threaded-On-One-End Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see page 67)

These handy black steel nipples have one threaded end and one unthreaded end. All have welded construction, so there's a weld bead on the inside. They meet ASTM A53 and A733, as well as ANSI/ASME B1.20.1.

Connections: NPT on one end, unthreaded on the other end.

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Black Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F, except plugs are rated 6,000 psi @ 72° F
- Pipe Nipples and Pipe: Use threaded Schedule 160 extra-thick-wall black steel (see page 67)
- Flanges: Use threaded extreme-pressure steel (see page 70)

The thick walls on these Class 3000 forged steel fittings stand up to high pressures. All meet ASTM A105 and ANSI/ASME B1.20.1; also meet ANSI/ASME B16.11, except the unions, lug unions, and low-profile couplings.

90° female×male elbows are also called street elbows. ***Unions*** meet MSS SP-83. ***Lug unions*** have two, three, or four lugs depending on their size. ***Half couplings*** are partially threaded; one end has an unthreaded portion that can be welded. ***Plugs*** are solid.

Connections: NPT.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Steel Threaded Pipe Plugs

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Flanges: Use threaded medium-pressure steel (see below)

The hollow center allows fluid to put pressure on the threads for a tight seal. Also called bull plugs, these heavy duty plugs are made from Schedule 80 pipe and are zinc plated for corrosion resistance. Meet MSS SP-95 and ASTM A234-WPB, as well as ANSI/ASME B1.20.1, B31.1, and B31.3.

Connections: NPT.

Pipe Size	Lg.		
1/8	2″	1109T11	$10.92
1/4	2″	1109T12	10.09
3/8	2 1/4″	1109T13	10.92

3/4	2 3/4″	1109T15	11.80
1	3″	1109T16	13.87
1 1/4	3 1/4″	1109T17	21.70
1 1/2	3 1/2″	1109T18	20.94
2	4″	1109T19	40.36

Pipe Sizes 1/2 to 1

Pipe Sizes 1/8 to 3/8 and 1 1/4 to 2

Medium-Pressure Steel Threaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam
- Fittings: Use threaded Class 300 medium-pressure iron (see page 63)
- Pipe Nipples and Pipe: Use threaded Schedule 80 thick-wall steel (see pgs. 64-65)

Forged for strength, these black steel flanges are also called Class 300 and raised-face flanges. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. For an installation set that includes a gasket and bolts, see pg. 3474. For gaskets, see pgs. 3474-3480; for bolts, see pgs. 3140-3142. Meet ASTM A105 and ANSI/ASME B16.5.

Connections: NPT.

Raised Surface on Back

Extra-Thick-Wall Black Steel Threaded Pipe Nipples and Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 3000 high-pressure black steel (see page 66)
- Flanges: Use threaded extreme-pressure steel (see page 70)

Ready for rugged service, these strong steel nipples and pipe are also known as Schedule 160. They have seamless construction for unrestricted flow. Meet ASTM A53, A106, and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Galvanized Steel Threaded Pipe Fittings

CAD

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe Nipples: Use threaded Schedule 160 extra-thick-wall galvanized steel (see below)

Forged for strength, these thick-wall fittings are also known as Class 3000. They are galvanized, so they have better corrosion resistance than black steel. All meet ASTM A105 and ANSI/ASME B1.20.1. They also meet ANSI/ASME B16.11, except the unions.

90° female×male elbows are also called street elbows. ***Unions*** meet MSS SP-83. ***Half couplings*** are partially threaded; one end has an unthreaded portion that can be welded. ***Hex-head plugs*** are hollow, except pipe sizes 1-2 are solid.

Connections: NPT.

Pipe Size	90° Elbows		90° Elbows, Female×Male		45° Elbows		Tees		Crosses

Extra-Thick-Wall Galvanized Steel Threaded Pipe Nipples

CAD

Fully Threaded

Threaded on Both Ends

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 3000 high-pressure galvanized steel (see above)

Designed for high-pressure applications, these strong nipples are also known as Schedule 160. They are galvanized for better corrosion resistance than black steel and have seamless construction for unrestricted flow. Meet ASTM A106B, A53, and A733, as well as ANSI/ASME B1.20.1.

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

FULLY THREADED

Pipe Size	Lg.		
1/2	1 1/8″	7736K113	$10.98

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Zinc-Plated Steel Threaded Hex-Socket Plugs

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: See table

Put an end to costly, messy leaks. An O-ring seal provides a dependable no-leak connection. Use in hydraulic systems and where vibration, temperature variations, and pressure spikes are a concern. Plugs are made of zinc-plated steel and are solid. They're interchangeable with standard SAE J514 straight-thread fittings. Meet SAE J1926 and ASTM B633.

Plugs with a ***Buna-N seal*** have a temperature range of –20° to 200° F. Plugs with a ***fluoroelastomer seal*** have a temperature range of –4° to 400° F.

Connections: UN/UNF straight threads.

Thread Size (Actual OD)	Max. psi @ 72° F	Hex Key Size	*With Buna-N Seal*		*With Fluoroelastomer Seal*	
5/16″-24	5,500	1/8″	4835K21	$1.68	4835K41	$1.93

1 5/8″-12	1,625	3/4″	4835K32	14.20	4835K52	18.21
1 7/8″-12	1,250	3/4″	4835K33	19.23	4835K53	24.75

Flush-Mount High-Pressure Steel Threaded Hex-Socket Plugs

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 5,000 psi @ 72° F

Precision machined with a 7/8″ taper, these steel plugs not only install flush, but also withstand higher pressure than standard steel plugs. Plugs are solid. Meet ASTM A574 and ANSI/ASME B1.20.3. Temperature range is –100° to 450° F.

Choose ***PTFE-coated*** plugs for corrosion resistance.

Connections: NPTF (Dryseal), which is compatible with NPT.

Pipe Size	Hex Key Size	*Uncoated*		*PTFE Coated*	
1/16	5/32″	4534K39	$0.36	4534K29	$1.13

1	5/8″	4534K46	12.90	—	—
1 1/4	3/4″	4534K47	17.65	—	—

Seal-Tight High-Pressure Steel Threaded Pipe Unions

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 100° F; 1,500 psi @ 700° F for steam
- Pipe Nipples and Pipe: Use threaded Schedule 160 extra-thick-wall black steel (see page 67)

Rather than the standard metal-to-metal seal you get on other pipe unions, these heavy duty forged steel unions have a special gasket that provides a seal-tight joint in high-pressure applications. The gasket is Type 304 stainless steel with a graphite filler. A Type 316 stainless steel retainer protects the seal from overtightening during installation. Meet MSS SP-83, ASTM A105, and ANSI/ASME B1.20.1. Temperature range is –20° to 700° F.

Connections: NPT.

Pipe Size			Pipe Size		
1/2	4690K11	$57.09	1 1/4	4690K14	$134.81
3/4	4690K12	64.82	1 1/2	4690K15	152.00
1	4690K13	84.01	2	4690K16	185.46

High-Pressure Steel Threaded Locknuts with PTFE Seal

- Use with air, water, oil, natural gas
- Maximum Pressure: See table

No need for PTFE tape and sealants—these locknuts have a built-in seal for high-pressure applications. They're made of zinc-plated steel for corrosion resistance. Screw one onto your fitting before making a connection. Rounded corners prevent overtightening during installation. Temperature range is –100° to 500° F.

Connections: NPT.

Pipe Size	Max. psi @ 72° F	Width	Thick.		
1/8	10,000	5/8″	3/16″	5530K14	$2.00
1/4	10,000	3/4″	5/16″	5530K16	2.52
3/8	10,000	7/8″	5/16″	5530K18	2.74

1 1/4	5,000	2″	3/8″	5530K25	10.02
1 1/2	3,000	2 1/4″	3/8″	5530K27	10.64
2	3,000	2 3/4″	7/16″	5530K29	31.44

High-Pressure Steel Threaded Pipe Outlets

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe: Use threaded Schedule 160 extra-thick-wall black steel (see page 67)

Create a threaded outlet anywhere on your pipe. Also known as branch connectors, they're made of heavy duty forged steel. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. Meet MSS SP-97 and ASTM A105; they also meet ANSI/ASME B16.9, B16.11, and B31.

Connections: NPT.

To Order: Please specify pipe size within the range shown.

Fits Pipe Size Range	Outlet, Pipe Size	Ht.		
1/4 to 36	1/4	3/4″	4587K51	$5.87
3/8 to 36	3/8	13/16″	4587K52	5.87

1 1/2 to 36	1 1/2	1 3/8″	4587K57	11.28
2 to 36	2	1 1/2″	4587K28	12.85

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Male Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Extreme-Pressure Steel Threaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 6,000 psi @ 72° F
- Pipe Nipples and Pipe: Use threaded Schedule XXH super-thick-wall steel (see below)
- Flanges: Use threaded extreme-pressure steel (see below)

With the thickest walls of all our threaded fittings, these super-tough Class 6000 forged black steel fittings handle the highest pressure. They meet ASTM A105 and ANSI/ASME B1.20.1; they also meet ANSI/ASME B16.11, except unions.

Half couplings are partially threaded; one end has an unthreaded portion that can be welded.

Connections: NPT.

Super-Thick-Wall Steel Pipe Nipples and Pipe

Fully Threaded

Threaded on Both Ends

Threaded on One End

- Use with air, water, oil, natural gas, steam
- Fittings: Use threaded Class 6000 extreme-pressure steel (see above)
- Flanges: Use threaded extreme-pressure steel (see below)

Super duty nipples and pipe, also known as Schedule XXH, have the thickest walls available. They are black steel and have seamless construction for unrestricted flow. Meet ASTM A106B and A733, as well as ANSI/ASME B1.20.1

Fully threaded nipples are also called close nipples; they are threaded on each end to the center.

Connections: NPT.

Extreme-Pressure Steel Threaded Flanges

Raised Surface on Back

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,700 psi @ 72° F; 3,200 psi @ 350° F for steam
- Fittings: Use threaded Class 6000 extreme-pressure steel (see above)
- Pipe Nipples and Pipe: Use threaded Schedule XXH super-thick-wall steel (see above)

Take one look at these hefty flanges and you'll have no doubt they are the strongest available. Also called Class 1500 flanges, they're made of heavy duty forged black steel and have a raised surface on the back. Bolt two same-size flanges together with a gasket (not included) to create easy access to your pipe. For bolts, see pages 3140-3142. Flanges meet MSS SP-6, MSS SP-25, ASTM A105, and ANSI/ASME B16.5.

Connections: NPT.

Pipe Size	Flange OD	Bolts Required Qty.	Bolts Required Dia.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

British Standard and Metric Threaded High-Pressure Steel Pipe Fittings

- Use with air, water, oil
- Maximum Pressure: See table

Make high-pressure connections between BSPT, BSPP, NPT, and metric threads. Fittings are made of zinc-plated steel for corrosion resistance.

Swivel adapters rotate 360° for tightening in confined spaces. ***Through-wall nipples*** are also called panel-mount couplings and bulkhead fittings. ***Hex-head plugs*** with BSPT threads are solid, except pipe size 1 is hollow; plugs with BSPP threads are hollow.

Connections: BSPT (British Standard Pipe Taper), BSPP (British Standard Pipe Parallel), NPT, or metric straight threads. Male BSPP threads have a rubber seal bonded to a metal washer.

How to Measure Male Threaded Pipe and Fittings— *Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Compact Extreme-Pressure Steel Threaded Pipe Fittings

- Use with air, water, hydraulic oil
- Maximum Pressure: See table

Heavy duty forged or barstock construction gives these little fittings a lot of might. Made of zinc-plated steel for corrosion resistance. Meet ASTM A108 or A576.

Connections: NPTF (Dryseal), which are compatible with NPT threads, or UN/UNF straight threads.

NPTF Connections

90° female×male elbows are also known as street elbows. ***Square-head plugs*** are hollow. ***Hex-head plugs*** are solid, except pipe sizes 3/4 and 1 are hollow. ***Hex-socket plugs*** are solid.

How to Measure Female Threaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″	1 5/8″	1 3/4″	2 3/8″	2 3/4″	3 3/8″

To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

How to Measure Threaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1
OD (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″

Pipe Size:	0	1/16	1/8	1/4	3/8	1/2	3/4	1
ID (to nearest 1/8″):	0	1/4″	3/8″	1/2″	5/8″	3/4″	1″	1 1/4″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4464KAC**. For information about fittings and pipe, see pgs. 2-3.

Precision Compact Extreme-Pressure Steel Threaded Pipe Fittings

- Use with air, water, hydraulic oil, natural gas
- Maximum Pressure: See table

Also called instrumentation fittings, these have precise threads, tight tolerances, and high pressure ratings. Plus, the male threads are rolled for extra strength. They have heavy duty forged or barstock steel construction and are zinc plated for corrosion resistance. Meet ASTM A108 or A576, as well as ANSI/ASME B31.1, B31.3, and B1.20.1. ***90° female × male elbows*** are also called street elbows. ***Hex-head plugs*** are solid. ***Hex-socket plugs*** are hollow. Connections: NPT.

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Butt-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see below and page 76)
- Flanges: Use unthreaded low-pressure steel (see page 76)

Get the leak resistance of a welded connection combined with the strength of black steel. Also known as Schedule 40, these fittings have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM A234 and ANSI/ASME B16.9.

180° bends are also known as U-bends. ***Stub ends*** are for use with the low-pressure easy-access flanges on page 76. ***Centered reducing couplings***, also called concentric reducers, connect one pipe to another pipe of a smaller diameter with the centers lined up. ***Off-center reducing couplings***, also known as eccentric reducers, connect one pipe to another pipe of a smaller diameter with the centers offset.

Connections: Butt weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows, Long Radius (C)			90° Elbows, Short Radius (C)			45° Elbows		180° Bends (C)

Standard-Wall Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see above)
- Flanges: Use unthreaded low-pressure steel (see page 76)

Also called Schedule 40, this unthreaded black steel pipe has welded construction, so there's a weld bead on the inside. Meets ASTM A53 and A733.

To Order: Please specify 1-, 3-, or 5-ft. length.

Pipe Size		1 ft.	3 ft.	5 ft.	Pipe Size		1 ft.	3 ft.	5 ft.	Pipe Size		1 ft.	3 ft.	5 ft.
1/2	7750K131	$4.89	$12.71	$19.55	1 1/2	7750K135	$10.22	$30.67	$51.12	4	7750K139	$38.43	$115.30	$192.16

1 1/4	7750K134	8.55	25.64	42.74	3	7750K138	31.57	94.72	157.87					

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Unthreaded Flanges— *Example shows pipe size 1/2.*

Pipe size is an industry designation, not the actual size. Place your flange on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your flange, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Standard-Wall Steel Unthreaded Pipe Nipples

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see page 75)
- Flanges: Use unthreaded low-pressure steel (see below)

Keep these nipples on hand for those times when a short piece of pipe is all you need. Also called Schedule 40 nipples, they're black steel and have welded construction, so there's a weld bead on the inside. Meet ASTM A733.

Pipe Size	1″ Lengths		1 1/2″ Lengths		2″ Lengths		3″ Lengths		4″ Lengths		6″ Lengths		8″ Lengths

Low-Pressure Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam (unless noted)
- Maximum Pressure: 150 psi @ 72° F; 150 psi @ 350° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see page 75 and above)
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see page 75)

Raised Surface on Back (All except Easy Access)

Flat Surface on Back (Easy Access)

For easy access to your pipe, create a flange connection. Also called Class 150 flanges, they connect by bolting two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3474. For gaskets, see pages 3474-3480; for bolts, see pages 3140-3142. Flanges are black steel and meet MSS SP-25, ASTM A105, and ANSI/ASME B16.5, unless noted.

Slip On— Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld— An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld— Also called weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access— Commonly called lap-joint flanges. Use these flanges with stub-end fittings (required, but not included; see page 75). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap— Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Low-Pressure Iron Pipe Fittings with Flanged Ends

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 150 psi @ 72° F; 125 psi @ 353° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see page 75 and above)
- Flanges: Use unthreaded low-pressure steel (see above)

Get rid of the middleman in your pipeline—these black cast iron fittings give you the shape and connection you want with fewer pieces to join. They're UL listed and FM approved, and because cast iron is brittle, they can be quickly opened in a fire emergency with the strike of a sledge hammer. Bolt the flanged end to another same-size flange, pump, or valve; a gasket is required, but not included. For an installation set that includes a gasket and bolts, see page 3474. For gaskets, see pages 3474-3480; for bolts see pages 3140-3142. Fittings meet Fed. Spec. WW-F-406, ASTM A126 and B307, and ANSI/ASME B1.20.1 and B16.1.

Centered reducing couplings are also known as concentric reducers.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.	90° Elbows		45° Elbows		Tees

How to Measure Unthreaded Pipe and Butt-Weld Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
OD (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Butt-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Pipe: Use unthreaded Schedule 80 thick-wall steel (see page 79)
- Flanges: Use unthreaded medium-pressure steel (see below)

Also known as Schedule 80 fittings, these are the strongest butt-weld black steel fittings we offer. They have beveled ends that, when connected to a pipe, create a trough for a strong weld. Meet ASTM A234.

Centered reducing couplings are also known as concentric reducers.

Connections: Butt weld (unthreaded).

Pipe Size	Wall Thick.	90° Elbows, Long Radius (C)		90° Elbows, Short Radius (C)		45° Elbows		180° Bends (C)		Tees

Medium-Pressure Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam
- Max. Pressure: 300 psi @ 72° F; 300 psi @ 300° F for steam
- Pipe: Use unthreaded Schedule 80 thick-wall steel (see page 79)
- Fittings: Use butt-weld Schedule 80 thick-wall steel (see above) and socket-weld high-pressure steel (see page 78)

Gain access to your pipe without disassembling your line. Also called Class 300 flanges, they have heavy duty forged construction for superior strength. Connect by bolting two same-size flanges together with a gasket (not included). For an installation set that includes a gasket and bolts, see page 3474. For gaskets, see pages 3474-3480; for bolts, see pages 3140-3142. Flanges are black steel and meet ASTM A105 and ANSI/ASME B16.5.

Slip On—Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld—An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld—Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Easy Access—Commonly called lap-joint flanges. Use these flanges with stub-end fittings (required, but not included; see page 75). The stub-end fitting is welded to the pipe (not the flange), so they're ideal for pipe that is frequently cleaned or inspected.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Pipe Size	Flange OD	Bolts Req'd Qty.	Bolts Req'd Dia.	Slip On		Socket Weld		Butt Weld		Easy Access		Cap

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Unthreaded Pipe and Flanges—*Example shows pipe size 3/8 for pipe, pipe size 1/2 for flanges.*

Pipe size is an industry designation, not the actual size. Place your pipe or flange on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe and butt-weld flange neck, or inside diameter (ID) of your slip-on, socket-weld, and easy-access flange, then select the pipe size on the scale that corresponds to your measurement.

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

DIN Steel Unthreaded Flange Adapters

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 230 psi @ 72° F; 180 psi @ 300° F for steam
- Pipe Nipples and Pipe: Use unthreaded Schedule 40 standard-wall steel (see pgs. 75-76)
- Fittings: Use butt-weld Schedule 40 standard-wall steel (see page 75)

Made to DIN EN standards, these flanges provide a smooth transition between your standard-wall (Schedule 40) pipe or fittings and another DIN EN flange connection. Flanges have heavy duty forged construction for superior strength. Bolt two same-size flanges together with a gasket (not included). Gaskets are sold separately below; see page 3155 for bolts. Meet DIN 2527, 2633, or 86030, as well as EN 1092-1.

Slip On—Slip the flange onto your pipe and weld on both sides of your pipe.

Butt Weld—Also known as weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Cap—Also known as blind flanges, use these solid flanges to close off the end of a pipe.

High-Pressure Socket-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe: Use unthreaded Schedule 80 thick-wall steel (see page 79)

Also known as Class 3000, these heavy duty black steel pipe fittings have forged construction that stands up to high pressures. Meet ASTM A105; also meet ANSI/ASME B16.11, except unions meet MSS SP-83 and reducing bushings meet MSS SP-79.

Connections: Socket weld (unthreaded).

How to Measure Socket-Weld Unthreaded Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your fitting on the scale to determine the pipe size. You can also measure the inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size:	0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3
ID (to nearest 1/8″):	0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″

To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

Thick-Wall Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use butt-weld Schedule 80 thick-wall steel (see page 77) and socket-weld high-pressure steel (see page 78)
- Flanges: Use unthreaded medium-pressure steel (see page 77)

Thick walls and seamless construction result in superior strength and unrestricted flow. Also known as Schedule 80, this black steel pipe meets ASTM A53, A106, and A733.

To Order: Please specify 1-, 3-, or 6-ft. length.

Pipe Size		1 ft.	3 ft.	6 ft.
1/8	7972K31	$21.61	$63.84	$98.22
1/4	7972K32	25.00	73.85	113.62

Extreme-Pressure Socket-Weld Steel Unthreaded Pipe Fittings

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 6,000 psi @ 72° F
- Pipe: Use unthreaded Schedule XXH super-thick-wall steel (see below)
- Flanges: Use unthreaded extreme-pressure steel (see below)

Looking for the strongest steel fittings we offer? Also known as Class 6000, these heavy duty forged black steel fittings handle extreme pressure. Meet ASTM A105; they also meet ANSI/ASME B16.11, except unions.

Connections: Socket weld (unthreaded).

Unthreaded Socket-Weld Connection

Pipe Size	90° Elbows		Tees		Unions		Couplings		Caps	
1/2	43665K114	$7.14	43665K154	$11.15	43665K254	$19.59	43665K194	$4.40	43665K234	$5.89

Super-Thick-Wall Steel Unthreaded Pipe

- Use with air, water, oil, natural gas, steam
- Fittings: Use socket-weld Class 6000 extreme-pressure steel (see above)
- Flanges: Use unthreaded extreme-pressure steel (see below)

The strongest black steel pipe we offer, this pipe is also known as Schedule XXH. It has seamless construction for unrestricted flow. Meets ASTM A106B and A733.

Pipe Size	1-ft. Lengths		2-ft. Lengths		3-ft. Lengths	
1/2	1155T11	$31.55	1155T16	$56.88	1155T22	$83.84
3/4	1155T12	44.45	1155T17	80.12	1155T23	120.18
1	1155T13	60.53	1155T18	109.12	1155T24	163.66
1 1/2	1155T14	89.63	1155T19	161.60	1155T25	220.36
2	1155T15	105.00	1155T21	199.74	1155T26	245.33

Extreme-Pressure Steel Unthreaded Flanges

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,700 psi @ 72° F; 3,200 psi @ 350° F for steam
- Pipe: Use unthreaded Schedule XXH super-thick-wall steel (see above)
- Fittings: Use unthreaded socket-weld extreme-pressure (Class 6000) steel (see above)

Flange connections give you access to your pipe without having to disassemble the line. Also called Class 1500 flanges, they are black steel and have heavy duty forged construction for superior strength. Connect by bolting two same-size flanges together with a gasket (not included). For bolts, see pages 3140-3142. Flanges meet MSS SP-6 and SP-25, as well as ASTM A105 and ANSI/ASME B16.5.

Slip On— Slip the flange onto your pipe and weld. There is no internal stop; you must weld the flange to your pipe on both sides.

Socket Weld— An internal stop supports pipe when welding and prevents the pipe from sliding all the way through.

Butt Weld— Also called weld-neck flanges. Butt-up the flange to your pipe and weld. The flange neck has a beveled end that, when connected to a pipe, creates a trough for a strong weld.

Cap— Also known as blind flanges, use these solid flanges to close off the end of a pipe.

Raised Surface on Back

For technical drawings and 3-D models, go to mcmaster.com.

How to Measure Unthreaded Pipe and Fittings—*Example shows pipe size 3/8.*

Pipe size is an industry designation, not the actual size. Place your pipe or fitting on the scale to determine the pipe size. You can also measure the outside diameter (OD) of your pipe or inside diameter (ID) of your fitting, then select the pipe size on the scale that corresponds to your measurement.

Pipe Size: 0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
OD (to nearest 1/8″): 0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″

Pipe Size: 0	1/8	1/4	3/8	1/2	3/4	1	1 1/4	1 1/2
ID (to nearest 1/8″): 0	1/2″	5/8″	3/4″	7/8″	1 1/8″	1 3/8″	1 5/8″	1 7/8″

ⓘ To measure larger pipe sizes, go to mcmaster.com and search for **4347KAC**. For information about fittings and pipe, see pgs. 2-3.

High-Pressure Steel Socket-Weld Pipe Outlets

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 72° F
- Pipe: Use unthreaded Schedule 80 thick-wall black steel (see page 79)

Also called branch connectors, use these outlets to create a tap off anywhere along your pipe. To install, drill a hole in your pipe to match the fitting's outlet size and weld in place. They're heavy duty forged steel and meet MSS SP-97 and ASTM A105, as well as ANSI/ASME B16.9, B16.11, and B31.

Connections: Socket weld (unthreaded).

To Order: Please specify pipe size within the range shown.

Fits Pipe Size Range	Outlet, Pipe Size	Ht.		
1/4 to 36	1/4	3/4″	**4587K61**	$9.29
3/8 to 36	3/8	7/8″	**4587K62**	6.86
1/2 to 36	1/2	1″	**4587K63**	8.15
3/4 to 36	3/4	1 1/8″	**4587K64**	8.15
1 to 36	1	1 3/8″	**4587K65**	9.17
1 1/4 to 36	1 1/4	1 3/8″	**4587K66**	13.62
1 1/2 to 36	1 1/2	1 3/8″	**4587K67**	13.62
2 to 36	2	1 1/2″	**4587K68**	14.05

Seal-Tight High-Pressure Steel Socket-Weld Pipe Unions

- Use with air, water, oil, natural gas, steam
- Maximum Pressure: 3,000 psi @ 100° F; 1,500 psi @ 700° F for steam
- Pipe: Use unthreaded Schedule XXH super-thick-wall steel (see page 79)

A Type 304 stainless steel gasket with a graphite filler gives these forged steel unions a tight seal under high pressures. They also have a Type 316 stainless steel retainer that protects the seal from overtightening during installation. Meet MSS SP-83, ASTM A105, and ANSI/ASME B1.20.1. Temperature range is –20° to 700° F.

Connections: Socket weld (unthreaded).

Pipe Size		
1/2	**4690K17**	$57.09
3/4	**4690K18**	64.82
1	**4690K19**	84.01
1 1/4	**4690K21**	134.81
1 1/2	**4690K22**	152.00
2	**4690K23**	185.46

Grooved-End Iron Unthreaded Pipe Fittings and Pipe

- Use with air and water
- Maximum Pressure:
  Fittings and Couplings: 1,000 psi @ 72° F;
  Pipe: Not rated

Use a coupling to join pipe and fittings.

Grooved ends on these fittings connect with a coupling for an easy way to install and maintain piping systems. Plus, the gaskets on the coupling allow for pipe expansion and contraction as temperatures change. All are UL listed and FM approved.

Elbows, ***tees***, ***caps***, and ***adapters*** are ductile or malleable iron and covered with rust-inhibiting orange paint. Meet ASTM A47 or A536.

Couplings have a two-piece housing, EPDM gaskets, and zinc-plated nuts and bolts. Meet ASTM A47, A183, A536, A563, and D2000. Temperature range is –40° to 230° F.

Standard-wall pipe is also known as Schedule 40. It is black steel and has welded construction, so there's a weld bead on the inside.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the inside diameter (ID) or outside diameter (OD), as shown at right. Then, refer to the chart and select the corresponding pipe size. For example, if the actual ID or OD measures 1.315″, the corresponding pipe size is 1″.

Unthreaded ID or OD	0.840″	1.050″	1.315″	1.90″	2.375″
Pipe Size	1/2″	3/4″	1″	1 1/2″	2″

About Plastic Fittings and Pipe

Plastic fittings and pipe offer several benefits over metal. They're lightweight, nontoxic, and corrosion, chemical, and rust resistant. You can also use them to transition from metal pipe fittings and pipe without the concern of destructive electrolytic corrosion (the electrical current generated between dissimilar metals that causes corrosion).

Note: The table below is only a general guide. For specific products and detailed information, see individual presentations.

Material	Features	Applications	Page(s)
UV-Resistant PVC (Polyvinyl Chloride)	All of the great features of PVC with the addition of a UV inhibitor, so it stands up to outdoor use.	Ideal for outdoor use and in cold water applications.	81, 89
PVC (Polyvinyl Chloride)	The most widely used plastic material for plumbing applications, offering good strength, corrosion resistance, and rigidity.	Use for cold water applications. NSF 61 certified for drinking (potable) water.	82-83, 85-93
Gravity-Flow PVC (Polyvinyl Chloride)	Good strength and corrosion resistance.	Designed for nonpressure drain, waste, and vent applications.	84-86
CPVC (Chlorinated Polyvinyl Chloride)	Similar to PVC except with chlorine added to handle higher temperatures.	Use with hot water and corrosive liquids. NSF 61 certified for drinking (potable) water.	94-96
Polyethylene	Strong, bendable material.	Good for water drainage applications.	97
Polypropylene	Excellent chemical resistance, this material resists acids, bases, and many solvents.	Good for laboratory plumbing and corrosive drainage piping.	97-100
Nylon	High strength and impact resistant.	Good for fuel lines (except barbed fittings).	100
PVDF (Polyvinylidene Fluoride)	Strong, tough material with good wear and abrasion resistance. Excellent UV and corrosion resistance.	Use for ultra-high-purity applications, such as in laboratories.	101
PFA (Perfluoroalkoxy)	Strong material with smooth, friction-resistant surface and excellent corrosion resistance.	Suitable for high-purity, chemical-handling applications.	101
PTFE (Polytetra-fluoroethylene)	Offers extreme corrosion resistance in high-temperature, high-purity applications.	Good for high-purity, high-temperature, chemical-handling applications.	102

Schedule and Pressure

Plastic pipe fittings and pipe are classified by Schedule, which is an indicator of the wall thickness. The higher the Schedule, the thicker the walls will be; thicker walls allow a pipe fitting or pipe to handle more pressure. In order to maintain the integrity of a piping system, be sure to use the same Schedule pipe and pipe fittings within one system.

Plastic pipe fittings are not rated for pressure; however, the pressure rating for pipe is often used as a reference. Keep in mind there are several factors that will reduce the pressure rating. For example, threads on a fitting will lower the pressure rating by approximately 50%. A reducing fitting will also lower the overall pressure of a system. And, as temperature rises, the amount of pressure a system can withstand decreases.

How to Connect Unthreaded Plastic Fittings

Unthreaded plastic fittings can have two different types of ends: pipe end (male) and socket end (female). The pipe end is also called a spigot.

Connect the fittings to pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement. See page 86 for PVC primer and cement; see page 94 for CPVC primer and cement.

UV-Resistant Standard-Wall (Schedule 40) PVC Unthreaded Pipe Fittings and Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure:
  Fittings: Not rated
  Pipe: See below

These PVC fittings and pipe have an additive that makes them resistant to ultraviolet light—use outdoors or in any plumbing application where you need to protect sensitive material. Rigid and corrosion resistant, PVC is the most popular plastic choice for low-pressure plumbing applications. ***Pipe*** meets ASTM D2467 and D1784.

Connect fittings to pipe by cementing the pipe end (male) into the socket end (female) using a PVC primer and cement (see page 86). Connections: Socket end (female) on fittings; pipe is unthreaded.

PVC Pipe Fittings

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at left. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size. For ***threaded*** fittings, round up the measurement to the closest ID listed in the chart and select the corresponding pipe size. For example, if the threaded pipe fitting ID measures 1 3/16″, the next highest ID in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Unthreaded OD or ID	—	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	2.875″	3.50″	4.50″	6.625″	8.625″

Standard-Wall (Schedule 40) White PVC Pipe Fittings

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Not rated
- Pipe: Use standard-wall (Schedule 40) white PVC unthreaded (see page 83)

Offering corrosion resistance, strength, and rigidity, these standard-wall PVC fittings are the most common choice for plastic fittings in low-pressure plumbing applications. They meet ASTM D1784 and D2466.

Connect fittings to pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86). The pipe end is also known as a spigot. Connections: Unthreaded socket end (female), unthreaded pipe end (male), or threaded (NPT).

Unthreaded Socket End (Female) to Unthreaded Socket End (Female)

(Continued on following page)

Warning! ***Never use PVC fittings and pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at right. For ***threaded*** fittings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the threaded OD or ID measures 1 3/16″, the next highest OD or ID in the chart is 1 3/8″, and the corresponding pipe size is 1″. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	6 5/8″	8 5/8″

Selectable-Angle Standard-Wall (Schedule 40) White PVC Unthreaded Pipe Elbows

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Not rated
- Pipe: Use standard-wall (Schedule 40) white PVC unthreaded (see below)

Always have the right elbow on hand to complete your job—you can cut these two-piece elbows to any angle you need. Furnished as a 90° elbow, they have cutting guides at 22 1/2°, 33 3/4°, 45°, 56 1/4°, 67 1/2°, and 78 3/4° angles; they also have a measuring template so you can cut a custom angle. After cutting, prime and cement the two pieces together (see page 86 for primer and cement). They're IAPMO listed and meet ASTM D2466. Connections: Socket end (female).

Standard-Wall (Schedule 40) White PVC Unthreaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See below
- Fittings: Use standard-wall (Schedule 40) white PVC (see page 82 and above)

PVC is the most popular plastic material for low-pressure plumbing applications, offering good corrosion resistance, strength, and rigidity. This pipe meets ASTM D1784 and D1785 and CSA B137.3-99.

Connect pipe to fittings by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

PVC Pipe Fittings

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then refer to the chart and select the corresponding pipe size. For example, if the actual OD or ID measures 1.660″, the corresponding pipe size is 1¼″.

Unthreaded OD or ID	1.660″	1.90″	2.375″	3.50″	4.50″
Pipe Size	1¼″	1½″	2″	3″	4″

Drain, Waste, and Vent Standard-Wall (Schedule 40) White PVC Pipe Fittings

- Use with water
- Max. Temperature: 140° F
- Maximum Pressure: Gravity flow only
- Pipe: Use standard-wall (Schedule 40) white PVC unthreaded (see page 83)

In addition to being the most popular fittings for nonpressure gravity-flow drain, waste, and vent applications, these fittings have thicker walls than the thin-wall sewer and drain PVC fittings (on page 86) to handle more demanding jobs. ***Easy-align flanges*** have a rotating base that allows easy adjustment (see pages 1998 and 2000 for more flanges and wax rings). All meet ASTM D1784, D2665, and D3311.

Note: Not for use with hot water or pressure-rated applications.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86). The pipe end is also known as a spigot.

Connections: Unthreaded socket end (female), unthreaded pipe end (male), or threaded (NPT).

Unthreaded Socket End (Female) to Unthreaded Socket End (Female)

(Continued on following page)

Warning! ***Never use PVC fittings and pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the inside diameter (ID) or outside diameter (OD), as shown at right. For ***threaded*** fittings, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the threaded ID or OD measures 1 3/16″, the next highest ID or OD in the chart is 1 3/8″, and the corresponding pipe size is 1″. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″	4 1/2″

Standard-Wall (Schedule 40) Clear PVC Pipe Fittings

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Not rated
- Pipe: Use standard-wall (Schedule 40) clear PVC unthreaded (see below and page 86)

Just as strong, rigid, and corrosion resistant as white PVC, but these fittings are transparent so you can see what's flowing through your system. Compatible with standard-wall (Schedule 40) white PVC pipe and fittings, all are FDA compliant, UL 94V0 listed for flammability, and meet ASTM D2466 and D2464. ***Female adapters*** are reinforced with a stainless steel ring.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Connections: Unthreaded socket end (female) or threaded (NPT).

Unthreaded Socket End (Female) to Unthreaded Socket End (Female)

Flexible Standard-Wall (Schedule 40) Clear PVC Unthreaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See below
- Fittings: Use standard-wall (Schedule 40) clear PVC unthreaded (see above)

Bend this pipe around objects—fewer connections not only saves you installation time, but also means less friction in fluid handling applications. Material is FDA compliant and meets 3-A (dairy) requirements.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Pipe Size	ID	Max. psi @ 73° F	5-ft. Lengths		10-ft. Lengths

PVC Pipe Fittings, Pipe, Cement & Primer

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at left. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size. For ***threaded*** fittings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the threaded pipe fitting OD measures 6½″, the next highest OD in the chart is 6⅝″, and the corresponding pipe size is 6″.

Unthreaded ID or OD	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	3.50″	4.50″	6.625″

Standard-Wall (Schedule 40) Clear PVC Unthreaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See below
- Fittings: Use standard-wall (Schedule 40) clear PVC unthreaded (see page 85)

Clear pipe offers optimum visibility, so you can see what is flowing through your system. This pipe is compatible with both clear PVC and white PVC standard-wall (Schedule 40) pipe systems. Pipe is FDA compliant and meets UL 94V0 for flammability and ASTM D1784.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) using primer and cement (see below).

Pipe Size	ID	Max. psi @ 73° F	4-ft. Lengths		8-ft. Lengths

Sewer and Drain Thin-Wall White PVC Pipe Fittings and Light Green Pipe

- Use with water
- Maximum Temperature: 140° F
- Maximum Pressure: Gravity flow only

Thin-wall PVC fittings and pipe are perfect for lightweight gravity-flow sewer and drain applications that don't require the strength found in standard-wall PVC.

Note: Not for use with standard-wall (Schedule 40) or thick-wall (Schedule 80) PVC fittings and pipe.

Fittings are white and are only compatible with the pipe sold below. All meet ASTM D3034 and ASTM D2729.

Unthreaded pipe is light green and is only compatible with the fittings sold below. *4½-ft. lengths* have plain ends; *10-ft. lengths* are belled on one end for easy connection. All pipe meets ASTM D2729.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) of the fitting using a PVC primer and cement (see below). Connections: Unthreaded socket end (female) or threaded (NPT) for fittings; pipe is unthreaded.

Unthreaded Socket End (Female) to Unthreaded Socket End (Female)

PVC Cement and Primer

Create firm, leakproof joints between PVC pipe and fittings. All are NSF 61 certified for use with drinking (potable) water. These products are also compliant under all state VOC rules in effect on July 1, 2010.

Cement meets ASTM D2564. For more PVC cement, see page 3421.

Primer prepares PVC pipe for solvent welding. To achieve greater overall strength, use primer before applying cement.

Barbed Dark Gray PVC Pipe Fittings

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See below
- Pipe: Use with flexible polyethylene (see page 88)

Installation couldn't be easier—just slip the barbed ends into flexible polyethylene pipe and secure with a worm-drive clamp (not included, see page 274). Also called insert fittings, all are made of rigid, corrosion-resistant PVC and meet ASTM D2609 and D1784.

Connections: Barbed or threaded (NPT).

Barbed Light Gray Polypropylene and White Nylon Pipe Fittings

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: Polypropylene: 120° F; Nylon: 150° F
- Maximum Pressure: See below
- Pipe: Use with flexible polyethylene (see page 88)

Also known as insert fittings, just slip the barbed end into flexible polyethylene pipe and secure with a worm-drive clamp (not included, see page 274). All meet ASTM D2609.

Polypropylene has good strength and is more flexible than PVC and nylon. *Note:* The use of pipe tape on the threads is not recommended.

Nylon is a great choice when your application requires excellent strength and resistance to impact.

For polypropylene and nylon barbed tube fittings, see pages 156-159 and 162-163; for barbed hose fittings, see pages 286-290.

Connections: Barbed or threaded (NPT).

Polyethylene Pipe & PVC Pipe Fittings

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, refer to the chart and select the corresponding pipe size. For example, if the actual OD or ID measures 1.315″, the corresponding pipe size is 1″.

Unthreaded OD or ID	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	2.875″	3.50″	4.50″	6.625″	8.625″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	6″	8″

Flexible Black Polyethylene Unthreaded Pipe for Barbed Fittings

- NSF 61 certified for use with drinking (potable) water
- Max.Temperature: 140° F
- Max. Pressure: See table
- Fittings: Use with barbed fittings (see page 87)

Strong and bendable, yet this high-density polyethylene pipe can easily be cut to length with a knife. Pipe meets ASTM D3350 and D2239, as well as BOCA.

Pipe Size	OD	ID	Max. psi @ 73° F	10-ft. Coils		25-ft. Coils		100-ft. Coils

★ Cannot be coiled; comes as a 10-ft. length.

Thick-Wall (Schedule 80) Dark Gray PVC Unthreaded Pipe Fittings and Flanges

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Fittings: Not rated; Flanges: 150 psi @ 72° F
- Pipe: Use thick-wall (Schedule 80) dark gray PVC unthreaded (see page 89)

Thicker walls give these PVC fittings more strength than standard-wall PVC fittings to handle higher pressures. PVC is the most widely used plastic material for plumbing applications, offering rigidity and corrosion resistance. All meet ASTM D2467, except the blind flanges.

Flanges are also called Class 150 flanges. Bolt two same-size flanges together with a gasket to form a tight seal (gasket required, but not included; see pages 3474-3480). *Easy-align* flanges, which are also called Van Stone flanges, have a ring that swivels for easy bolt hole alignment. *Blind* flanges close off the end of a pipe.

Connect fittings to pipe by cementing the pipe end (male) into the socket end (female) using a PVC primer and cement (see page 86). The pipe end is also known as a spigot. Connections: Unthreaded socket end (female) or unthreaded pipe end (male).

Socket End (Female) to Socket End (Female)

Thick-Wall (Schedule 80) Dark Gray PVC Unthreaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See below
- Fittings and Flanges: Use thick-wall (Schedule 80) dark gray PVC unthreaded (see pg. 88 and above)

The thicker walls make this pipe stronger and able to withstand higher pressures than standard-wall PVC pipe. PVC is the most widely used plastic material for plumbing applications, offering rigidity and corrosion resistance. Meet ASTM D1784 and D1785. Connect pipe to fittings by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Pipe Size	OD	ID	Max. psi @ 73° F	5-ft. Lengths		10-ft. Lengths	
1/4″	0.540″	0.282″	1,130	48855K41	$3.04	48855K51	$4.60

UV-Resistant Thick-Wall (Schedule 80) Black PVC Unthreaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See table at right

Just as strong and rigid as the PVC pipe above, but this pipe is specially formulated with a UV inhibitor to protect sensitive material from light. Great for use outdoors. All meet ASTM D2467.

Connect pipe to fittings by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Pipe Size	OD	ID	Max. psi @ 72° F	4-ft. Lengths		8-ft. Lengths	
1/4″	0.540″	0.282″	570	5066K11	$8.90	5066K21	$17.11

1″	1.315″	0.935″	320	5066K15	35.57	5066K25	68.41
1 1/2″	1.90″	1.476″	240	5066K16	59.51	5066K26	114.44
2″	2.375″	1.913″	200	5066K17	82.79	5066K27	159.21

Warning! ***Never use PVC fittings and pipe with compressed air or gas.***

PVC Pipe & Fittings

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic fittings and pipe, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at left. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size. For ***threaded*** fittings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the threaded OD or ID measures 1 3/16″, the next highest OD or ID in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Unthreaded OD	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	2.875″	3.50″	4.50″	6.625″
Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	____
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	6″

Thick-Wall (Schedule 80) Clear PVC Unthreaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Max. Pressure: See below
- Fittings and Flanges: Use thick-wall (Schedule 80) dark gray PVC unthreaded (see pages 88-89)

Clear pipe provides optimum visibility, allowing you to see what's flowing through your piping system. Ideal for heavy duty applications, this pipe has thicker walls than standard-wall clear PVC pipe, so it is stronger and can withstand higher pressures. This pipe is UL 94V0 listed for flammability and meets ASTM D1784 and D1785; the material meets FDA (food and beverage).

Connect pipe to fittings by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Pipe Size	OD	ID	Max. psi @ 73° F	4-ft. Lengths		8-ft. Lengths

Thick-Wall (Schedule 80) Dark Gray PVC Threaded Pipe Fittings and Flanges

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Fittings: Not rated; Flanges: 150 psi @ 73° F
- Pipe Nipples and Pipe: Use thick-wall (Schedule 80) PVC threaded (see pages 92-93) *Note:* Pipe nipples and pipe are rated 110° F

The threads on these fittings and flanges permit quick and easy connections. All are made of rigid, corrosion-resistant PVC, which is the most popular plastic material for plumbing applications. They have thicker walls than standard-wall fittings, making them stronger to handle heavy duty applications. All meet ASTM D2464 and D2467.

Hex-head plugs are hollow. ***Flanges*** are also called Class 150 flanges.

Bolt two same-size flanges together with a gasket to form a tight seal (gasket required, but not included; see pages 3474-3480).

Connect unthreaded fittings to pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86). The pipe end is also known as a spigot. Connections: Threaded (NPT), unthreaded socket end (female), or unthreaded pipe end (male).

PVC-to-Metal Thick-Wall (Schedule 80) Dark Gray PVC Pipe Fittings

- NSF 61 certified for use with drinking (potable) water
- Max. Temperature: 140° F
- Max. Pressure: Not rated
- Pipe: Use with thick-wall (Schedule 80) dark gray PVC unthreaded (see pg. 89)

Transition your piping system from PVC to brass or copper with these fittings. Made of PVC, all of these fittings have a molded-in-place brass threaded insert and a stainless steel reinforcement collar. ***Unions*** are furnished with an O-ring. Fittings meet ASTM D2467; threads meet ANSI B1.20.1.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Connections: Unthreaded socket end (female) or threaded (NPT).

Also Available: CPVC-to-metal thick-wall (Schedule 80) pipe fittings for temperatures up to 200° F. Please ask for 43565K12 and specify pipe size and shape from the listing below.

Metric-to-Inch Thick-Wall Dark Gray PVC Pipe Unions

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: 235 psi @ 73° F
- Pipe: Use with thick-wall (Schedule 80) dark gray PVC unthreaded (see page 89)

Use these unions to convert your pipe from German DIN (Deutsche Industrie Normen) standards to inch pipe sizes. Made of corrosion-resistant PVC with an O-ring. The DIN mm size is the actual OD of the pipe.

Connect unthreaded fittings and pipe by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86).

Connections: Unthreaded socket end (female).

Unthreaded Socket End (Female) on Both Ends

DIN Size	Pipe Size		
20 mm	½″	5460K11	$10.46
25 mm	¾″	5460K12	13.32
32 mm	1″	5460K13	15.20
40 mm	1¼″	5460K14	30.19
50 mm	1½″	5460K15	34.19
63 mm	2″	5460K16	46.37
110 mm	4″	5460K18	120.21

Warning! ***Never use PVC fittings and pipe with compressed air or gas.***

PVC Pipe Fittings & Nipples

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Threaded/ Unthreaded Fitting — *Threaded Pipe*

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the inside diameter (ID) or outside diameter (OD), as shown at left. For ***threaded*** fittings and pipe, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the threaded ID or OD measures 1 3/16″, the next highest ID or OD in the chart is 1 3/8″, and the corresponding pipe size is 1″. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	6 5/8″
Unthreaded ID	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	—	—	—	—
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	6″

Reinforced Thick-Wall (Schedule 80) Dark Gray PVC Threaded Pipe Fittings

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Not rated, except unions which are 235 psi @ 73° F
- Pipe Nipples and Pipe: Use thick-wall (Schedule 80) dark gray PVC threaded (see below and page 93) *Note:* Pipe nipples and pipe are rated 110° F

Take the worry out of over-tightening female plastic pipe threads—these PVC fittings have a stainless steel collar to support the threads and keep them from cracking. Threaded connections permit quick and easy installation. ***Unions*** have an O-ring. All meet ASTM D1784 and D2467.
Connections: Threaded (NPT) or unthreaded socket end (female).

Thick-Wall (Schedule 80) Dark Gray PVC Threaded Pipe Nipples

- NSF 61 certified for use with drinking (potable) water
- Max. Temperature: 110° F
- Max. Pressure: See below
- Fittings and Flanges: Use thick-wall (Schedule 80) dark gray PVC threaded (see pages 90-91)

With threads at each end, these nipples connect quickly and easily to threaded fittings and flanges. PVC is the most popular plastic material for plumbing applications, offering rigidity and corrosion resistance. All meet ASTM D1784.
Fully threaded nipples are also called close nipples; they are threaded on each end to the center.
Connections: NPT.

Thick-Wall (Schedule 80) Dark Gray PVC Threaded Pipe

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 110° F
- Maximum Pressure: See table
- Fittings and Flanges: Use with thick-wall (Schedule 80) dark gray PVC threaded (see pages 90-91)

Threads on both ends allow quick and easy connections. PVC is the most popular plastic material for plumbing applications, offering rigidity and corrosion resistance. All meet ASTM D1784 and D1785. Connections: NPT.

Thick-Wall (Schedule 80) Clear PVC Threaded Pipe Nipples

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 110° F
- Maximum Pressure: See table
- Fittings and Flanges: Use with thick-wall (Schedule 80) dark gray PVC threaded (see pages 90-91)

Made of transparent PVC, these pipe nipples have the rigidity and corrosion resistance of dark gray PVC except with a see-through benefit. They're compatible with other thick-wall (Schedule 80) threaded fittings and pipe. Meet ASTM D1784 and D1785.

Fully threaded nipples are also called close nipples; they're threaded on each end to the center. Connections: NPT.

Thick-Wall (Schedule 80) Dark Gray PVC Threaded-On-One-End Pipe Nipples

- NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 110° F
- Maximum Pressure: See below
- Fittings and Flanges: Use with thick-wall (Schedule 80) dark gray PVC threaded (see pages 90-91)

Easily convert socket end (female) connections to threaded connections with these threaded-on-one-end nipples. They're made of PVC, which offers rigidity and corrosion resistance. All meet ASTM D1784.

Connect unthreaded pipe to fittings by cementing the pipe end (male) into the socket end (female) using a primer and cement (see page 86). Connections: NPT on one end; unthreaded on other end.

Warning! ***Never use PVC fittings and pipe with compressed air or gas.***

CPVC Cement, Primer & Pipe Fittings

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the inside diameter (ID) or outside diameter (OD), as shown at left. Then, refer to the chart and select the corresponding pipe size. For example, if the actual ID or OD measures 1.315″, the corresponding pipe size is 1″.

Untreaded ID or OD	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	2.875″	3.50″	4.50″	6.625″	8.625″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	6″	8″

CPVC Cement and Primer

Create firm, leakproof joints between CPVC pipe and fittings. All are NSF 61 certified for use with drinking (potable) water. These products are also compliant under all state VOC rules in effect on November 1, 2010.

Cement meets ASTM F493. For more CPVC cement, see page 3421.

Primer prepares CPVC pipe for solvent welding. To achieve greater overall strength, use primer before applying cement.

Size	Orange Cement		Purple Primer	
8 oz.	24285K31	$4.40	18815K71	$4.67
16 oz.	24285K32	8.57	18815K72	9.08
32 oz.	24285K33	17.41	24285K43	15.06

Thick-Wall (Schedule 80) Light Gray CPVC Unthreaded Pipe Fittings and Flanges

- Use with hot water; NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 200° F
- Maximum Pressure: Fittings: Not rated; Flanges: 150 psi @ 72° F
- Pipe: Use thick-wall (Schedule 80) light gray CPVC unthreaded (see page 95)

CPVC is similar to PVC, except it has the addition of chlorine so it stands up to higher temperature applications such as hot water. All meet ASTM D1784 and F439.

Unions have an O-ring. ***Flanges*** are also called Class 150 flanges. Bolt two same-size flanges together with a gasket to form a tight seal (gasket required, but not included; see pages 3474-3480).

Easy-align flanges, also known as Van Stone flanges, have a ring that swivels for easy bolt-hole alignment.

Connect fittings to pipe by cementing the pipe end (male) into the socket end (female) using a CPVC primer and cement (see above). The pipe end is also known as a spigot. Connections: Socket end (female) or pipe end (male).

Socket End (Female) to Socket End (Female)

(Continued on following page)

Warning! ***Never use CPVC fittings or pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the inside diameter (ID) or outside diameter (OD), as shown at right. For ***unthreaded*** flanges and pipe, take the actual measurement and select the corresponding pipe size. For ***threaded*** pipe, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the threaded OD measures 1 3/16″, the next highest OD in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Unthreaded ID or OD	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	2.875″	3.50″	4.50″	6.625″	8.625″

Thick-Wall (Schedule 80) Light Gray CPVC Unthreaded Pipe

- Use with hot water; NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 200° F
- Maximum Pressure: See below
- Fittings and Flanges: Use with thick-wall (Schedule 80) light gray CPVC unthreaded (see page 94 and above)

Choose CPVC over PVC for applications that involve higher temperatures such as hot water. Pipe meets ASTM D1784 and F441. Connect unthreaded pipe to fittings by cementing the pipe end (male) into the socket end (female) using a CPVC primer and cement (see page 94).

Pipe Size	OD	ID	Max. psi @ 73° F	5-ft. Lengths		10-ft. Lengths

Thick-Wall (Schedule 80) Light Gray CPVC Threaded Pipe Nipples

- Use with hot water; NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 200° F
- Maximum Pressure: See below
- Fittings and Flanges: Use with thick-wall (Schedule 80) light gray CPVC threaded (see page 96)

CPVC is similar to PVC, but has the addition of chlorine—this allows it to stand up to higher temperature applications such as hot water. These nipples have threads on each end for quick and easy connections. All meet ASTM F437. ***Fully threaded nipples*** are also called close nipples; they're threaded on each end to the center. Connections: NPT.

Pipe Size	Max. psi @ 73° F	FULLY THREADED Lg.		THREADED ON BOTH ENDS 1 1/2″ Lengths		2″ Lengths		2 1/2″ Lengths		3″ Lengths

Warning! ***Never use CPVC fittings or pipe with compressed air or gas.***

CPVC Pipe Fittings & Flanges

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the inside diameter (ID) or outside diameter (OD), as shown at left. For ***threaded*** fittings, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the threaded ID or OD measures 1 3/16″, the next highest ID or OD in the chart is 1 3/8″, and the corresponding pipe size is 1″. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″
Unthreaded ID	0.540″	0.675″	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″	2.875″	3.50″	4.50″

Thick-Wall (Schedule 80) Light Gray CPVC Threaded Pipe Fittings and Flanges

- Use with hot water; NSF 61 certified for use with drinking (potable) water
- Maximum Temperature: 200° F
- Maximum Pressure: Fittings: Not rated; Flanges: 150 psi @ 72° F
- Pipe Nipples: Use with thick-wall (Schedule 80) light gray CPVC threaded (see page 95)

CPVC is the best choice for high-temperature applications, such as hot water. Threaded ends permit quick and easy connections. Meet ASTM D1784 and F439.

Unions have an O-ring. ***Plugs*** are hollow. ***Flanges*** are also called Class 150 flanges. Bolt two same-size flanges together with a gasket to form a tight seal (gasket required, but not included; see pgs. 3474-3480).

Connect unthreaded fittings to pipe by cementing the pipe end (male) into the socket end (female) using a CPVC primer and cement (see page 94). The pipe end is also known as a spigot.

Connections: Threaded (NPT) or unthreaded socket end (female).

Snap-Lock Gravity-Flow Black Polyethylene Pipe Fittings and Pipe

- Use for water drainage
- Temperature: Not rated
- Maximum Pressure: Not rated

Snap-together design makes it easy to connect fittings to pipe. Made of high-density polyethylene, these fittings and pipe resist freeze/thaw cycles and won't corrode, crack, or crumble unless exposed to direct sunlight. Elbows, tees, wyes, and pipe are corrugated inside and out, making them strong and bendable. All meet ASTM F405.

Offset adapters have a tapered opening that can be cut to 3½″×2½″ or 4″×3″. The ***pipe*** snaps into elbows, tees, wyes, and caps. *Nonperforated pipe* is ideal for flowing drainage to one area. *Perforated pipe* has slits along its entire length that allow drainage to be dispersed. All pipe exceeds specifications contained in the Soil Conservation Service (SCS) Engineering Practice Standard for subsurface drains.

Heat-Weld Thick-Wall (Schedule 80) Black Polypropylene Unthreaded Pipe Fittings

- Use with water, concentrated acetic acid and hydroxides, alkalies, salt solutions, solvents
- Temperature Range: –20° to +180° F
- Maximum Pressure: See below
- Pipe: Use thick-wall (Schedule 80) black polypropylene unthreaded (see below)

Heat weld these fittings to pipe—the result is a leak-tight joint that's stronger than cement without the mess or the potential of breakdown over time. Simply melt the mating surfaces with a heating tool (sold separately) and when the surfaces cool a weld forms.

Polypropylene has good strength and excellent chemical resistance. It is also UV resistant for extended use outdoors and is inert to moisture. All meet ASTM D4101. ***Unions*** have a fluoroelastomer O-ring.

Connections: Socket end (female).

Also Available: Tan polypropylene fittings in metric sizes 20 mm, 25 mm, 32 mm, 50 mm, and 63 mm. Metric size is the actual OD. Temperature range is 32° to 212° F. Maximum pressure is 150 psi at 73° F. Meet ASTM D4101. Please ask for 45435K1 and specify size and shape from the listing below.

Hand-Held Heat-Weld Kit

Includes everything you'll need to join heat-weld fittings to pipe. You'll get a heating tool, male and female heat face sets with bolts, depth gauge, cold ring pipe clamp with inserts, pipe cutter, beveling tool, timer, thermal blanket, auxiliary handle, hex key wrenches, thermostat adjustment tool, instructions, and a heavy duty tool box.

9159K18 ..... $2,331.82

Thick-Wall (Schedule 80) Black Polypropylene Unthreaded Pipe

- Use with water, concentrated acetic acid and hydroxides, alkalies, salt solutions, solvents
- Temperature Range: –20° to +180° F
- Maximum Pressure: See below
- Fittings: Use heat-weld thick-wall (Schedule 80) black polypropylene unthreaded (see above)

Our polypropylene pipe has good strength and excellent chemical resistance; it's also UV resistant and inert to moisture. Use this pipe with the heat-weld fittings above, or cut and thread it to your own specifications. Meets ASTM D4101.

Also Available: Light gray polypropylene pipe in metric sizes 20 mm, 25 mm, 32 mm, 50 mm, and 63 mm. Metric size is the actual OD. Temperature range is 32° to 212° F. Maximum pressure is 150 psi at 73° F. Please ask for 45435K2 and specify pipe size. Available in 8-ft. lengths only.

Drain, Waste, and Vent Green Polypropylene Pipe Fittings and Pipe

- Use with water, bleach, sulfur dioxide, salt water, organic solvents, acids, alkalies
- Temperature Range: –10° to +212° F
- Maximum Pressure: Gravity flow

Groove seal connections on these gravity-flow fittings and pipe allow you to create leak-resistant joints without the need for cement or heat welding—plus they can be easily dismantled and reused. Polypropylene has good strength, excellent chemical resistance, and is UV resistant. They all meet CSA B181.3, UL 94V-2, and ASTM D4101 and F1412.

These fittings can only be used with the pipe sold below. To make a connection, create a groove in the pipe using a groove tool (sold separately); place a union nut on the pipe and push on a seal ring until it clicks into the groove. Now you can insert the pipe into the fitting and tighten by hand, followed by a 1/4 turn with the spanner wrench. Connections: Groove seal or threaded (NPT).

Reinforced Thick-Wall (Schedule 80) Black Polypropylene Threaded Pipe Fittings

- Use with water, caustic solutions, benzoic acid, nitric acid, acetone, solvents
- Temperature Range: 40° to 180° F
- Max. Pressure: 150 psi @ 73° F for water
- Pipe: Use thick-wall (Schedule 80) black polypropylene threaded (see page 100)

A Type 316 stainless steel reinforcing collar supports the threads to prevent cracking when mating with another thread. These fittings are made of lightweight polypropylene, which is inert to moisture and offers excellent strength, corrosion resistance, and UV resistance. ***Unions*** have a fluoroelastomer O-ring. All meet ASTM D1598.

Connections: NPT. *Note:* The use of pipe tape is not recommended; thread sealant (sold separately below) is recommended.

Blue Thread Sealant—8-oz. Can 4883K28 $17.82

Warning! ***Never use polypropylene fittings or pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD) of a fitting, or the ID of a flange, as shown at right. Then, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1 3/16″, the next highest ID or OD in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Threaded ID or OD	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″	4 1/2″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	3″	4″

Thick-Wall (Schedule 80) Black Polypropylene Threaded Pipe Fittings and Nipples

- Use with water, oil, fertilizers, lubricants, soap solutions, calcium chloride, sodium chloride
- Temperature Range: –20° to +150° F
- Maximum Pressure: 150 psi @ 70° F, unless noted

You'll get excellent strength and chemical resistance at an economical price with these fiberglass-reinforced polypropylene fittings. They're also UV resistant and inert to moisture. ***Flanges*** are also called Class 150 flanges. Bolt two same-size flanges together with a gasket to form a tight seal (gasket required, but not included; see pages 3474-3480).

Connections: NPT. *Note:* The use of pipe tape is not recommended; thread sealant (sold separately on page 98) is recommended.

Thick-Wall (Schedule 80) Black Polypropylene Threaded Pipe

- Use with water, oil, fertilizers, lubricants, soap solutions, calcium chloride, sodium chloride
- Maximum Temperature: 180° F
- Maximum Pressure: See below

Choose this polypropylene pipe when you need excellent strength and chemical resistance. This material is also UV resistant and inert to moisture. Pipe meets ASTM D4101 and ANSI B1.20.1.
Connections: NPT.

High-Strength White Nylon Threaded Pipe Fittings

- Use with water, oil, soap solutions, acetone, fuel (unless noted)
- Temperature Range: 32° to 167° F; High-Pressure is rated for a max. temp. of 180° F
- Maximum Pressure: 75 psi @ 72° F; High-Pressure is rated 500 psi @ 72° F (unless noted)

Made of nylon 6, these fittings offer high strength and impact resistance. All are FDA compliant, except the high-pressure hex reducing bushings. Connections: NPT. *Note:* PTFE tape or paste sealant is recommended when connecting (sold separately, see page 3415).

Miniature High-Strength White Nylon Threaded Pipe Fittings

- Use with water, oil, soap solutions, acetone
- Temperature Range: 0° to 175° F
- Maximum Pressure: 125 psi @ 72° F

Compact in size, these tiny fittings are great for tight spaces. They're made of nylon, which offers high strength and impact resistance. All are FDA compliant.
Connections: NPT or straight thread (UNF).

Size ♦	90° Elbows		90° Elbows, Female × Male		Tees		Couplings Lg.		Hex-Head Plugs		Hex Nipples	
10-32	8316T11	$2.61	8316T14	$2.63	8316T26	$2.88	5/8″	8316T29	8316T33	$0.38	8316T44	$0.38

♦ 10-32 and 1/4″-28 are actual thread size. 1/16″ is a pipe size.

Warning! ***Never use polypropylene or nylon fittings or pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at right. For ***threaded*** fittings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID in the chart is 1 3/8″, and the corresponding pipe size is 1″. For ***unthreaded*** pipe, take the actual measurement and select the corresponding pipe size.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 7/8″	2 3/8″
Unthreaded ID or OD	0.405″	0.540″	0.675″	0.840″	1.050″	1.315″	1.90″	2.375″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/2″	2″

UV-Resistant Thick-Wall (Schedule 80) Red PVDF Threaded Pipe Fittings and Pipe

- Use with water, salts, strong acids, solvents, chlorine, bromine, bases
- Temperature Range: Fittings and Flanges: –40° to +280° F; Pipe and Nipples: 40° to 280° F
- Maximum Pressure: Fittings: 200 psi @ 73° F; Flanges: 150 psi @ 73° F; Pipe and Nipples: See below

PVDF (polyvinylidene fluoride), also known as Kynar, withstands the damaging effects of sun and oxygen, so it is ideal for use outdoors. It's also an excellent choice for corrosive chemicals. All are UL 94V-0 listed for flammability and meet ASTM D3222. ***Flanges*** are also called Class 150 flanges. Bolt two same-size flanges together with a gasket to form a tight seal (gasket required, but not included; see pages 3474-3480).
Connections: Threaded (NPT) or unthreaded.

♠ When you thread the pipe, the max. psi drops by 50%.

Corrosion-Resistant Thick-Wall (Schedule 80) White PFA Threaded Pipe Fittings

- Use with water, acids, salt solutions, alcohols, oils
- Maximum Temperature: 200° F for 1/8″ and 1/4″ pipe sizes; 175° F for 3/8″ pipe size; 150° F for 1/2″ and 3/4″ pipe sizes
- Maximum Pressure: See below

Use these fittings when you want extreme corrosion resistance and high purity, but don't require the high temperature resistance of PTFE. PFA (perfluoroalkoxy) has a low coefficient of friction and outstanding antistick properties. Plus, this tough material resists stress cracking and is nonreactive to most chemicals and solvents. Material is FDA compliant and meets 3-A (dairy).
The ***90° female × male elbows*** are also known as street elbows. ***Unions*** are furnished without O-rings, except the 3/4″ pipe size which includes a fluoroelastomer O-ring.
To connect, use PTFE tape or paste sealant (see page 3415). Connections: NPT.

Warning! ***Never use PVDF or PFA fittings or pipe with compressed air or gas.***

PTFE Pipe Fittings

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) or inside diameter (ID), as shown at left. For ***threaded*** fittings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the threaded pipe fitting OD measures 1 3/16″, the next highest OD in the chart is 1 3/8″, and the corresponding pipe size is 1″. For ***unthreaded*** pipe, take the actual measurement and select the corresponding pipe size.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 7/8″	2 3/8″
Unthreaded OD	0.405″	0.540″	0.675″	0.840″	1.050″	1.315″	____	____
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/2″	2″

High-Temperature Thick-Wall (Schedule 80) White PTFE Threaded Pipe Fittings

- Use with water, deionized water, oils, acids, solvents, concentrated sodium hydroxide, methylene chloride
- Temperature Range: –450° to +550° F
- Maximum Pressure: See below

When high purity and extreme resistance to temperatures are critical, rely on PTFE. PTFE has superior corrosion resistance that's even better than that of lined steel, alloy, and exotic metals such as tantalum and zirconium. It's also nonreactive to most chemicals.

Hose-end adapters have a barbed end that connects to a hose using a worm-drive clamp (not included, see page 274). ***Quick-clamp adapters*** have a quick-clamp (sanitary) end, which is also called a tri-clamp; you'll need a quick clamp (not included, see pg. 208) to make a connection. ***Flanges*** are used in pairs with a gasket to create a tight seal (gasket required but not included; see pgs. 3474-3480). ***Fully threaded pipe nipples***, also called close nipples, are threaded on each end to the center.

Connections: Threaded (NPT), barbed, quick clamp, or unthreaded.

▲ Pipe will withstand these pressures, even when threaded.

Warning! ***Never use PTFE fittings or pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.
For information about plastic pipe and fittings, see page 81.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown. For ***threaded*** fittings and pipe, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1 3/16″, the next highest is 1 3/8″ and the corresponding pipe size is 1″. For ***unthreaded*** fittings, take the actual measurement and select the corresponding pipe size.

Threaded OD or ID	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Unthreaded ID	0.840″	1.050″	1.315″	1.660″	1.90″	2.375″
Pipe Size	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Unthreaded Socket End — *Threaded Male End* — *Threaded Female End*

Quick-Access Black Polypropylene Flanged Pipe Fittings

- Use with water, calcium chloride, and fertilizer
- Temperature Range: –20° to +150° F
- Maximum Pressure @ 70° F: 150 psi
- Pipe and Pipe Nipples: Use polypropylene

Get a tight yet easily accessible connection. The flanged ends secure with a clamp (sold separately).
Clamps are 300 series stainless steel with an EPDM gasket. Use a 5/16″ nut driver to tighten.
Connections: Flanged, threaded NPT, threaded BSPT (British Standard Pipe Taper), or barbed.

British Standard Schedule 40 White PVC Pipe Fittings

- Use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: Not rated
- Pipe and Pipe Nipples: Use unthreaded standard-wall (Schedule 40) pipe and threaded British standard pipe nipples

Put a threaded fitting onto your unthreaded pipe—the threaded ends permit quick and easy connections. Fittings are NSF 61 certified for use with drinking (potable) water; the unthreaded socket ends of the fittings also meet ASTM D2466. The material meets ASTM D1784. Connect unthreaded fittings to pipe using PVC primer and cement (see page 86).
Connections: Threaded BSPT (British Standard Pipe Taper) and unthreaded socket end (female).

British Standard Schedule 80 Gray PVC Pipe Nipples

- Use with drinking (potable) water
- Maximum Temperature: 140° F
- Maximum Pressure: See table
- Fittings: Use threaded British standard

In addition to being NSF 61 certified for use with drinking (potable) water, these pipe nipples also meet ASTM D1784.
Connections: Threaded BSPT (British Standard Pipe Taper).

Warning! ***Never use polypropylene or PVC fittings or pipe with compressed air or gas.***

For information about selecting and measuring pipe and fittings, see pages 2-3.

Flexible Couplings and Fittings for Pipe

- Use with air and water in drain, waste, and vent applications
- Temperature Range: –40° to +120° F
- Maximum Pressure @ 72° F: 4.3 psi
- Pipe: Use on unthreaded aluminum, cast iron, rigid PVC, rigid CPVC, ductile iron, steel, and stainless steel

A flexible PVC body with series 300 stainless steel bands permits quick and easy installation. Use these couplings and fittings to connect rigid pipes of the same or different materials. All meet ASTM D5926 and the codes set by ICC-ES (International Code Council Evaluation Service).

Couplings and ***reducing couplings*** are CSA certified and meet ASTM C1173 for underground use. Vacuum rating is 30″ Hg @ 72° F.

90° elbows, ***tees***, and ***caps*** are not for underground use. Not rated for vacuum.

Also Available: Fittings with Type 316 stainless steel bands where marked with a ♦. They offer extra corrosion resistance. Please ask for 4693K1 and the specify corresponding part number from the table.

Flexible Couplings for Plastic Pipe and Fittings

- Use with air and water in drain, waste, and vent applications
- Temperature Range: –40° to +120° F
- Maximum Pressure @ 72° F: 4.3 psi
- Pipe and Fittings: Use on rigid PVC pipe and fittings and corrugated polyethylene pipe

Here are easy solutions to difficult connections. These couplings have a flexible PVC body with 300 series stainless steel bands. They meet ASTM D5926.

Socket End to Socket End and ***Pipe End to Socket End***—If your rigid plastic pipe becomes damaged, these couplings allow you to create a new hassle-free connection without disassembling your entire system. *Socket-end to socket-end couplings* connect two socket-end (female) fittings without using a pipe. *Pipe-end to socket-end couplings* connect a pipe to a socket-end (female) fitting. To install both styles, simply cut out the damaged pipe, slide the coupling over the ends of the fittings or pipe, and tighten the bands. For installation in close quarters, you can cut the length down to either 3″ or 2″. Vacuum rating is 30″ Hg @ 72° F.

Pipe End to Corrugated Pipe—Ideal for storm and drainage systems, use these couplings to connect a rigid plastic pipe to a corrugated polyethylene pipe. To install, slide the coupling over the ends of the two pipes and tighten the bands; a groove in the coupling matches the groove in corrugated pipe. Not rated for vacuum.

Low-Pressure Cut-to-Length Couplings for Pipe

Coupling with Clamp

- Use with water in drain, waste, and vent applications; not for use with compressed air or gas
- Temperature Range: –13° to +140° F
- Maximum Pressure: See table
- Pipe: Use on steel and rigid PVC

Connect two pipes that are up to 100 feet apart—simply cut the coupling to the length you need and attach a clamp (sold separately) to each end. Use couplings to connect rigid pipes of the same or different materials. They fit standard-wall (Schedule 40) and thick-wall (Schedule 80) pipe.

Couplings are flexible PVC. They're weatherproof and ozone resistant. **To Order:** Please order in increments of 5 ft. up to the full coil length of 100 ft.

Clamps are corrosion-resistant galvanized steel. You'll need one clamp for each connecting point.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Low-Pressure Type 304 Stainless Steel Couplings for Pipe

- Use with air and water; also use in drain, waste, and vent applications
- Temperature Range: 0° to +180° F
- Maximum Pressure @ 72° F: 15 psi
- Pipe: Use on aluminum, cast iron, steel, stainless steel, and rigid PVC

Also known as no-hub couplings, these couplings are rigid and corrosion resistant. They're made from Type 304 stainless steel with a one-piece molded neoprene sleeve; the sleeve has a stop in the center. Connect rigid pipes of the same or different materials. Couplings meet ASTM A666 and C564 and the 94-20 codes set by ICC-ES (International Code Council Evaluation Service).

▲ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

Low-Pressure Couplings for Pipe and Tubing

- Use with air, glass, plastic pellets, resins, and wood chips; not for use with liquids
- Temperature Range: With Neoprene Gasket: –50° to +180° F; With Silicone Gasket: –103° to +500° F
- Maximum Pressure @ 72° F: 20 psi
- Pipe and Tubing: Use on aluminum, copper, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC

Join two pieces of rigid pipe or tubing of the same or different materials for use in low-pressure air and vacuum conveying systems, as well as in gravity-flow systems. Couplings are galvanized steel with zinc-plated steel nuts and bolts; the gasket is protected by a Type 304 stainless steel inner sleeve (unless noted) and a stainless steel strip that provides an escape route for electrostatic buildup when used in a fully grounded system. Vacuum rating is 29.9″ Hg @ 72° F.

Note: Measure the OD of your pipe or tubing and select the coupling that's closest in size to the OD dimension below.

Low-Pressure Quick-Lock Couplings for Pipe and Tubing

- Use with air, dust, grains, pellets, and powders; not for use with liquids
- Temperature Range: –30° to +180° F
- Maximum Pressure @ 72° F: 15 psi
- Pipe and Tubing: Use on aluminum, copper, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC

A simple turn of the T-handle will tighten and loosen these couplings, so you can quickly disassemble and reassemble your lines without tools. Use couplings to connect pieces of rigid pipe or tubing of the same or different materials. They're ideal for use in gravity-flow systems and low-pressure air and vacuum conveying systems. Couplings are Type 304 stainless steel with a tan gum rubber gasket that's FDA compliant. They also have a metal strip that provides an escape route for electrostatic buildup when used in a fully grounded system. Vacuum rating is 29.9″ Hg @ 72° F.

Note: Measure the OD of your pipe or tubing and select the coupling that's closest in size to the OD dimension below.

Medium-Pressure Compression Couplings for Copper Tubing

- Use with water; not for use with air or gas
- Temp. Range: 32° to 180° F
- Max. Pressure @ 72° F: 125 psi

For leak-resistant connections on copper tubing without threading or soldering, try these brass couplings. Simply slide your tube into the coupling and turn the end nuts until hand tight plus a quarter turn—this compresses the gasket for a tight seal. You may need to tighten over time. All have an EPDM gasket that permits moderate movement and misalignment of tube ends. Not rated for vacuum. NSF 61 certified for use with drinking (potable) water in all states as of July 1, 2010.

▲ Tube size is the accepted designation of the copper tubing industry, not the actual OD.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Medium-Pressure Compression Couplings for Pipe

Stainless Steel and Carbon Steel
- Use with air, antifreeze, and water; not for natural gas or steam
- Temperature Range: –60° to +260° F
- Maximum Pressure @ 72° F: 200 psi
- Pipe: Use on aluminum, steel, stainless steel, and rigid CPVC

Black and Galvanized Malleable Iron
- Use with water; not for compressed air, gas, or steam
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: 125 psi
- Pipe: Use on steel and rigid PVC

PVC
- Use with water; not for compressed air, gas, or steam
- Temperature Range: –20° to +125° F
- Maximum Pressure @ 72° F: 150 psi
- Pipe: Use on steel and rigid PVC

Get quick, liquid-tight connections on rigid pipe of the same or different material without threading, welding, or gluing. Simply slide pipe into the coupling and turn the end nuts until hand tight. You may need to tighten over time. Not rated for vacuum.

All have a Buna-N (nitrile) gasket that permits moderate movement and misalignment of pipe ends.

Type 304 stainless steel couplings provide excellent corrosion resistance. They meet ASTM A312-03 and ANSI B36.19.

Carbon steel couplings are strong and durable with poor corrosion resistance. They meet ASTM A53-04 and ANSI B36.10.

Malleable iron couplings have fair corrosion resistance. *Black malleable iron* couplings meet ASTM A197; *galvanized malleable iron* couplings meet ASTM A153 and A197.

PVC couplings are light in weight and more economical than the metal couplings.

Medium-Pressure Vibration-Resistant Couplings for Pipe

- Use with air, alkalies, diluted acids, salts, and water
- Temperature Range: –4° to +200° F
- Maximum Pressure @ 72° F: 232 psi
- Pipe: Use on aluminum, steel, stainless steel, and rigid PVC

Perfect for high-vibration areas, these couplings have teeth that bite into the pipe's surface to prevent the pipe from pulling out. They can also accommodate up to 5° misalignment between pipes. Use them to connect rigid pipes of the same or different materials. Couplings are Type 316 stainless steel with an EPDM gasket that's FDA compliant. Meet ASTM 1476 (Type 2, Class 2). Vacuum rating is 28″ Hg @ 72° F.

High-Pressure Couplings for Pipe

Coupling with Two Bolts

Coupling with Four Bolts

- Use with drinking (potable) water, bases, mild acids, and salt solutions
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: 500 psi
- Pipe: Use on cast iron, steel, and rigid PVC

Choose these heavy duty steel couplings for high-pressure applications. Use them to connect rigid pipes of the same or different materials. To install, center the coupling over two pipe ends and tighten the bolts with a wrench. Couplings allow limited expansion and contraction; they do not restrain side-to-side movement. Vacuum rating is 15″ Hg @ 72° F.

All couplings have a Buna-N (nitrile) gasket and meet AWWA (American Water Works Association) C-219 standards. Those ***with two bolts*** also meet ASTM A307 and A536, and those ***with three to six bolts*** also meet ASTM A53, A513, and A715. All couplings are also NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Deep-Freeze Plug Kits for Pipe

Create a temporary ice plug in your pipe so you can make repairs without draining the line—great for sprinkler systems and anywhere draining is not practical. These kits freeze the standing water (or other fluid with a similar freezing point) that's in your line, eliminating the need to refill or reheat and preventing air-lock problems that can occur.

Simply wrap a jacket (included) around your pipe at an upstream location near the point of repair and inject CO_2 (not included) into the jacket. After use, the CO_2 evaporates and the ice plug melts, so there's little to clean up. Use on steel, iron, copper, and plastic pipe.

Kits include up to three jackets, one or two unfilled cylinders for CO_2, a 10-ft. high-pressure hose, fittings, insulated work gloves, rubber mallet, timing log, safety glasses, carrying case, and instructions.

Kits

Low-Pressure Repair Clamps for Pipe and Tubing

- Use with air, water, and waste water
- Temperature Range: –50° to +180° F
- Maximum Pressure @ 72° F: 15 psi
- Pipe and Tubing: Use on aluminum, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC

Repair pinholes, punctures, and cracks in low-pressure systems. Couplings are Type 304 stainless steel with a neoprene gasket and zinc-plated steel nuts, bolts, and washers. They also have a zinc-plated steel strip that bridges the opening between the bolts to provide complete coverage. Vacuum rating is 29.9″ Hg @ 72° F.

Note: Measure the OD of your pipe or tubing and select the coupling that is closest in size to the OD dimension below.

Medium-Pressure Adjustable-Diameter Repair Clamps for Pipe

- Use with: See table
- Temperature Range: –20° to +180° F
- Maximum Pressure: See table
- Pipe:
  For Water: Use on aluminum, stainless steel, and rigid PVC;
  For Natural Gas: Use on ductile iron and steel

If your pipe's OD has changed over time due to corrosion or build up, these clamps are adjustable to accommodate the variance. They have one-piece Type 304 stainless steel construction and a full-circle Buna-N (nitrile) gasket. Vacuum rating is 15″ Hg @ 72° F for pinholes; vacuum is not rated for other repairs.

With Type 304 Stainless Steel Lugs, Bolts, and Nuts— Repair pinholes, cracks, and full-circle breaks in your water pipe. Use these under water and anywhere corrosion is a concern; also use them with air. Clamps are NSF 61 certified for use with drinking (potable) water.

With Ductile Iron Lugs and Alloy Steel Bolts and Nuts— Use clamps *for water* to repair pinholes, cracks, and full-circle breaks; they are NSF 61 certified for use with drinking (potable) water. Use clamps *for natural gas* to repair holes and cracks (do not use for full-circle breaks).

For information about selecting and measuring pipe and fittings, see pages 2-3.

Medium-Pressure Single-Hole Repair Clamps for Pipe

- Use with air, drinking (potable) water, and natural gas
- Temperature Range: –20° to +180° F
- Maximum Pressure: See table
- Pipe: Use on aluminum, cast iron, and steel; also rigid PVC for water applications only

Also called patch clamps, use to repair pinholes, punctures, and small splits in a pipe without having to disassemble your system. All have one-piece construction, unless noted, and are NSF 61 certified for use with drinking (potable) water. They are Type 304 stainless steel with a Buna-N (nitrile) gasket, ductile iron lugs, and steel nuts and bolts. Vacuum rating is 15″ Hg @ 72° F for pinholes; vacuum is not rated for other repairs.

Also Available: Items marked with a ♠ can also be furnished with an EPDM gasket for hot water and steam applications up to 300° F. Please ask for 4570K1 and specify the pipe size.

Medium-Pressure Multi-Hole Repair Clamps for Pipe and Copper Tube

- Use with air and drinking (potable) water
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: Air: 100 psi; Water: 150 psi
- Pipe: Use on steel and rigid PVC

Repair multiple pinholes, punctures, splits, and full-circle breaks on air and water lines. These clamps are also a great choice when you want to add support to corroded pipe. Clamps slip over pipe, so there's no need to disassemble your system. All have one-piece Type 304 stainless steel construction with ductile iron lugs and galvanized steel nuts and bolts. They also have a full-circle Buna-N (nitrile) gasket that is NSF 61 certified for use with drinking (potable) water as of October 1, 2010. Vacuum rating is 15″ Hg @ 72° F.

High-Pressure Hinged Repair Clamps for Pipe

- Use with water, antifreeze, diesel fuel, natural gas, and oil
- Temperature Range: –20° to +250° F
- Maximum Pressure: See table
- Pipe: Use on cast iron and steel

Often called emergency clamps, use these high-pressure clamps to repair pinholes, punctures, and splits in pipe. Not for full-circle breaks. Clamps have a hinged design that opens wide and closes over the pipe, so there's no need to disassemble your system. They are ductile iron with a Buna-N (nitrile) gasket and electroplated steel bolts. Not rated for vacuum.

High-Pressure Two-Piece Repair Clamps for Pipe

4″ Length

8″ Length

- Use with water, antifreeze, diesel fuel, natural gas, and oil
- Temperature Range: –20° to +250° F
- Maximum Pressure: See table
- Pipe: Use on cast iron and steel

Providing the highest pressure rating of all the repair clamps we offer, these also have a two-piece design that makes installation easy. Just position the two clamp halves over the damaged pipe and secure the bolts—there's no need to disassemble your system. Clamps are 3/16″ thick steel plate with zinc-plated steel nuts and bolts. Not rated for vacuum. Not for full-circle breaks.

4″ Length—Repair small holes caused by pitting. Furnished with a cone-shaped Buna-N (nitrile) gasket.

8″ Length—Use to repair corrosion spots and splits. Furnished with a Buna-N (nitrile) strip gasket that runs the full length of the clamp.

For information about selecting and measuring pipe and fittings, see pages 2-3.

Saddle Taps for Metal-to-Plastic Pipe

- Use with drinking (potable) water; not for use with compressed air or gas
- Maximum Temperature: 140° F
- Maximum Pressure @ 72° F: 2″, 3″, and 4″ pipe sizes: 235 psi; 6″ pipe size: 200 psi
- Pipe: Use on aluminum, cast iron, ductile iron, steel, stainless steel, rigid PVC, and rigid CPVC

With Threaded NPT Outlet

Create additional outlets, connections, and transitions from metal pipe to PVC pipe. Saddles are PVC with an EPDM gasket and zinc-plated steel nuts, bolts, and washers. They have a two-piece design for quick, easy installation and come with your choice of a socket end (unthreaded) outlet or a threaded NPT outlet. All are NSF 61 certified for use with drinking (potable) water. Vacuum rating is 26″ Hg @ 72° F.

To install, shut down your line and drill a hole in the pipe where you want to create a connection. Position the saddle over the hole so the gasket and lip are fully engaged with the hole, and secure with the nuts, bolts, and washers.

Flexible Saddle Taps for Pipe

- Use with drain, waste, and vent applications
- Temperature Range: –4° to +110° F

Easily tap-off a new connection on a wide range of pipe sizes. These flexible saddles are PVC with three 300 series stainless steel clamps. To install, shut down your line and drill a hole in the pipe where you want to create a connection. Position the saddle over the hole and tighten the clamps to a minimum of 60 in./lbs. torque. Not rated for pressure or vacuum.

Saddle Taps for Steel Pipe

- Use with air and drinking (potable) water
- Temperature Range: –20° to +180° F
- Maximum Pressure @ 72° F: Air: 100 psi; Water: 150 psi
- Pipe: Use on steel

Quickly tap into existing pipelines for branch lines, air and vacuum valves, and other equipment. Saddles have a taper-seal gasket with wraparound bands that provide nearly 360° contact with pipe. As bands are tightened, pressure is uniformly distributed around the pipe for maximum support. Clamps are ductile iron with a blue epoxy coating; they have a Buna-N (nitrile) gasket and galvanized steel threaded bands, nuts, and washers. They are NSF 61 certified for use with drinking (potable) water. Vacuum rating is 15″ Hg @ 72° F.

To install, shut down your line and position the saddle over the area where you want to create a connection. Secure with the bands, nuts, and washers, then drill a hole in the pipe.

Note: The required hole size (the hole size you will need to drill) is the same size as the threaded outlet pipe size.

■ Also fits 1 1/4″ pipe size with a pipe OD of 1.660″. ♣ Length is 4 1/4″. ▲ Length is 5 5/16″.

Pipe Blinds

Also called paddle blinds, just slip a blind between two Class 150 flanges to temporarily block the flow while you work downstream.

Steel blinds have a 7″ long handle and meet ASTM A36.

PTFE-coated blinds have a Type 304 stainless steel core and are ideal for corrosive applications. Handle length varies from 2 3/4″ long for 4739K21 to 5″ long for 4739K26. Blinds meet ASTM D4894 and are FDA compliant.

Expansion Joints

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: When ordering an expansion joint, you must first know the size of your pipe. Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) of your pipe, as shown at left. Then, refer to the chart and select the corresponding pipe size. For example, if the unthreaded pipe OD measures 1.90″, the corresponding pipe size is 1½″.

Unthreaded Pipe OD	1.90″	2.375″	2.875″	3.50″	4.50″	5.563″	6.625″	8.625″	10.750″	12.750″
Pipe Size	1½″	2″	2½″	3″	4″	5″	6″	8″	10″	12″

About Expansion Joints

Expansion joints reduce stress, vibration, and noise in piping and duct systems by providing a point of flexibility to absorb any movement.

Expansion joints are rated for three types of movement: ***compression***, when the distance between the connections is shortened; ***extension***, when the distance between the connections is lengthened; and ***deflection***, when the connections are moved off center. While they can handle three types of movement, they can only move one way at a time. For example, if a joint is compressed, it must go back to its original position before it can be deflected.

Expansion Joints with Easy-Align Galvanized Steel Flanged Ends

Neoprene
- Temperature Range: –50° to +230° F
- Maximum Pressure: 225 psi @ 72° F
- Vacuum: 26″ Hg @ 72° F

EPDM
- Temperature Range: –60° to +250° F
- Maximum Pressure: 225 psi @ 72° F
- Vacuum: 26″ Hg @ 72° F

The flanged ends on these expansion joints rotate for easy bolt hole alignment during installation. The flanges are made of galvanized steel and have a flat face; they'll mate with other flat-face Class 150 flanges without the need for a gasket. All have a flexible body that's nylon-reinforced for structural strength.

Double-arch joints absorb more vibration, plus can withstand more movement than the single-arch joints.

Neoprene offers excellent abrasion resistance. Ideal for use with antifreeze. Available with your choice of straight UNC threaded bolt holes or unthreaded bolt holes.

EPDM has good abrasion resistance with a higher temperature rating than neoprene. Use with water and alcohols. Bolt holes are unthreaded.

						Movement Distance			Threaded Bolt Holes				Unthreaded Bolt Holes					
									Neoprene				Neoprene			EPDM

★ OD (A) is 12½″.

Expansion Joints with Gasketed Flanged Ends

Chlorobutyl
- Temperature Range: –60° to +250° F
- Maximum Pressure: 190 psi @ 72° F
- Vacuum: 26″ Hg @ 72° F

Neoprene
- Temperature Range: –50° to +225° F
- Maximum Pressure: 190 psi @ 72° F
- Vacuum: 26″ Hg @ 72° F

Neoprene w/Buna-N Liner
- Temperature Range: –65° to +225° F
- Maximum Pressure: 210 psi @ 72° F
- Vacuum: 30″ Hg @ 72° F

You'll get a better seal than with other expansion joints because these come with molded flanged ends that act as gaskets. Because the flanges are molded into the body, they do not rotate; however, all have galvanized steel back up flanges that do. These joints will mate with the Class 150 flanges in your piping system. The bolt holes are unthreaded. The joint bodies have a single arch and are nylon reinforced, except the joints that are neoprene with Buna-N liner which are reinforced with polyester cord.

Chlorobutyl withstands higher temperatures than neoprene or Buna-N. It has good abrasion resistance.

Neoprene offers excellent abrasion resistance and is ideal for use with antifreeze.

Neoprene with Buna-N (nitrile) liner handles more applications than neoprene alone. It has good abrasion resistance and is for use with water, antifreeze, oils, grease, and hydraulic fluids.

For information about selecting pipe size, see pages 2-3. For information about expansion joints, see page 110.

Please Read Before Ordering: When ordering an expansion joint, you must first know the size of your pipe. Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first measure the outside diameter (OD) of your pipe, as shown at right. Then, refer to the chart and select the corresponding pipe size. For example, if the unthreaded pipe OD measures 1.90″, the corresponding pipe size is 1½″.

Unthreaded Pipe OD	1.90″	2.375″	2.875″	3.50″	4″	4.50″	5″	5.563″	6.625″	8.625″	10.750″	12.750″
Pipe Size	1½″	2″	2½″	3″	3½″	4″	4½″	5″	6″	8″	10″	12″

Corrosion-Resistant PTFE Expansion Joints with Ductile Iron Flanged Ends

- Use with water, air, natural gas, oil, antifreeze, hydrochloric acid
- Temperature Range: 0° to 400° F
- Maximum Pressure: 138 psi @ 72° F
- Vacuum: 29.9″ Hg @ 72° F

Corrosive chemicals are no match for these super-tough PTFE expansion joints—there's even a rust inhibitor on the flanges to prevent corrosion. Joints have a triple arch to absorb vibration and limit rods to prevent overextension. The flanges have a flat face; they'll mate with other flat-face Class 150 flanges without the need for a gasket. Bolt holes have UNC straight threads.

Pipe Size	O'all Lg.	OD (A)	Bolt Circle Dia. (B)	Flange Thick. (C)	Threaded Bolt Holes No.	Threaded Bolt Holes Size	Movement Distance Compression	Movement Distance Extension	Movement Distance Deflection

Stainless Steel Bellows Expansion Joints with Easy-Align Steel Flanged Ends

- Use with water, air, steam, natural gas, oil, antifreeze
- Temperature Range: –20° to +800° F
- Maximum Pressure: 150 psi @ 72° F
- Vacuum: 29″ Hg @ 72° F

These expansion joints have a corrosion-resistant Type 321 stainless steel body that stands up to higher temperatures than the other joints. The flanges are carbon steel and rotate for easy bolt hole alignment during installation. Flanges have a flat face that will mate with other flat-face Class 150 flanges (gasket required, but not included; see pages 3474-3480). All are made to EJMA (Expansion Joint Manufacturers Association) standards.

Liners are Type 304 stainless steel. Simply slide one into the expansion joint to provide a smooth interior for better flow.

Stainless Steel Bellows Expansion Joints with Steel Butt-Weld Ends

- Use with water, air, steam, natural gas, oil, antifreeze
- Temp. Range: –20° to +800° F
- Maximum Pressure: 150 psi @ 72° F
- Vacuum: 29″ Hg @ 72° F

With a Type 321 stainless steel body like the expansion joints above, these will also stand up to high temperatures and corrosion. However, these joints have beveled butt-weld carbon steel ends for a permanent, welded connection to pipe.

Pipe Size	O'all Lg.	Movement Distance Compression	Movement Distance Extension	Movement Distance Deflection		
3″	5″	¼″	⅛″	1/16″	5254K11	$233.10

Slip-On Expansion Joints with Clamps

- Use with water, oil, petroleum, sewage, sludge, calcium chloride and sodium carbonate 20% in water
- Temperature Range: Neoprene: –20° to +225° F; Silicone: –75° to +500° F
- Maximum Pressure: 150 psi @ 72° F
- Vacuum: 20″ Hg @ 72° F

Just slip these joints over your pipe ends and tighten the band clamps. All have a triple arch for extra flexibility as well as internal and external reinforcing rings that prevent deformation during surges and negative pressure. The band clamps are T-bolt style and made of 300 series stainless steel with steel bolts.

Neoprene joints are impregnated with nylon to offer good abrasion resistance.

Silicone joints are impregnated with fiberglass, so they remain soft and flexible at high temperatures.

Pipe Size	O'all Lg.	Movement Distance Compression	Movement Distance Extension	Movement Distance Deflection	Neoprene		Silicone	
2″	7″	1″	½″	1⅛″	5428K14	$191.56	54345K21	$279.38

Low-Pressure Slip-On Expansion Joints with Clamps

- Use with water and air in drain, waste, and vent systems
- Temp. Range: –30° to +130° F
- Maximum Pressure: 4.3 psi @ 72° F
- Vacuum: Not rated

Designed for vertical use in drain, waste, and vent systems, these PVC joints easily slip over the ends of pipes. They have a single arch design and internal stops that ensure pipe is in the proper position. The band clamps are Type 301 stainless steel.

Pipe Size	O'all Lg.	Movement Distance Compression	Movement Distance Extension	Movement Distance Deflection		
1½″	4″	½″	1½″	¼″	48345K25	$12.05

Rotating Joints

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″
Pipe Size (NPT)	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″

About Rotating Joints

Rotating joints transfer hot and cold materials from your supply line to a continuously revolving drum, roll, or other rotating equipment. They are often used in industrial processes such as the manufacture of paper, plastic, textiles, and rubber.

All rotating joints have at least two threaded connections known as *rotor threads* and *port threads*. Joints with two-way flow also have a third connection called *elbow threads*.

Rotor threads are male threads on a shaft that rotates with the drum.

Port threads are the stationary female threads located on the housing where you connect your supply (or return) line to the rotating joint.

Elbow threads are only found on two-way flow rotating joints. Connect a hose or pipe to the stationary female threads to remove media from the drum.

Normally, the housing and the port and elbow threads remain stationary and the rotor threads rotate with the drum or roll.

One-Way Flow

One-way flow joints have one port and one rotor connection to handle flow that's moving through a drum or roll in one direction. They are typically used in pairs, with one joint supplying fluid and the other joint returning fluid.

Two-Way Flow

Two-way flow joints have one elbow, one port, and one rotor connection to handle flow that's moving in two directions. For example, use them to supply steam and return condensation from a drum or roll.

Right-Hand Rotor Threads

Use rotating joints with ***right-hand rotor threads*** for drums and rolls that rotate counterclockwise.

Left-Hand Rotor Threads

Use rotating joints with ***left-hand rotor threads*** for drums and rolls that rotate clockwise.

High-Speed Brass Rotating Joints

- Use with water, oil, intermittent steam (up to 20% of operating time)
- Max. Temperature: 250° F
- Maximum Pressure:
  Water: 750 psi @ 72° F
  Oil: 100 psi @ 72° F
  Steam: 15 psi @ 250° F
- Vacuum: Not Rated

Built for speed, these rotating joints have a brass body, a carbon graphite/bronze seal, and two precision ball bearings that keep the seal faces aligned. Joints with a 3/8″ to 1″ rotor thread size have a stainless steel rotor shaft; all others have a carbon steel rotor shaft. All have right-hand rotor threads.

Rotor Connections: NPT or straight. Port and Elbow Connections: NPT.

Rebuild kits consist of a right-hand rotor, as well as ball bearings, seals, spacers, and springs.

Also Available: Rotating joints with left-hand rotor threads for drums and rolls that rotate clockwise. Please ask for 5275K1 and specify left-hand rotor threads and the corresponding right-hand part number below.

Rotor Thread Size	Port Thread Size	Max. Speed, rpm	Body Dia.	One-Way Flow Lg.		Two-Way Flow Elbow Thread Size	Lg.		Rebuild Kits

High-Speed Stainless Steel Rotating Joints

- Use with water, air, oil, steam
- Temperature Range: Water: –40° to +300° F; Oil: –40° to +395° F; Steam: Up to 350° F
- Maximum Pressure: Water: 750 psi @ 72° F; Air: 300 psi @ 72° F; Oil: 100 psi @ 72° F; Steam: 120 psi
- Vacuum: 22″ Hg @ 72° F

Choose these high-speed rotating joints when you need superior corrosion resistance. They have a 300 series stainless steel body, a fluorocarbon/carbon graphite seal, and two precision ball bearings. All have a stainless steel rotor shaft with right-hand threads. Connections: NPT.

Also Available: Rotating joints with left-hand rotor threads for drums and rolls that rotate clockwise. Please ask for 9177K1 and specify left-hand rotor threads and the corresponding right-hand part number below.

Medium-Speed Rotating Joints

- Use with water, oil, steam
- Temperature Range: –20° to +375° F
- Maximum Pressure: Water: 250 psi @ 72° F; Oil: 100 psi @ 72° F; Steam: 150 psi
- Vacuum: Not rated

Ideal for transferring water, oil, and steam at moderate speeds, these joints have a cast iron body, a stainless steel/carbon graphite gasket, and a precision ball bearing, except joints with 1 1/4″ rotor threads and larger which have two precision ball bearings. All have a grease fitting and a steel rotor shaft with right-hand threads. Connections: NPT.

Also Available: Rotating joints with left-hand rotor threads for drums and rolls that rotate clockwise. Please ask for 5278K1 and specify left-hand rotor threads and the corresponding right-hand part number below.

Rotor Thread Size	Port Thread Size	Max. Speed, rpm	Body Dia.	One-Way Flow Lg.			Two-Way Flow Elbow Thread Size	Lg.

High-Temperature Medium-Speed Rotating Joints

- Use with oil or steam
- Temperature Range: Oil: –60° to +600° F; Steam: Up to 450° F
- Maximum Pressure: See below
- Vacuum: Not rated

Whether you're using oil or steam, these one-way-flow joints can handle your high-temperature rotating applications. They have a cast iron body that's painted with a high-temperature gold enamel, a carbon steel/carbon graphite seal, and a carbon graphite bearing. All have a nickel-plated steel rotor shaft with right-hand threads. Connections: NPT.

Also Available: Rotating joints with left-hand rotor threads for drums and rolls that rotate clockwise. Please ask for 9189K1 and specify left-hand rotor threads and the corresponding right-hand part number below.

Rotor Thread Size	Port Thread Size	Max. Speed, rpm	Body Dia.	Lg.	For Oil Max. psi @ 72° F			For Steam Max. psi

High-Pressure Low-Speed Rotating Joints

- Use with water, oil, hydraulic oil
- Temperature Range: –22° to +248° F
- Maximum Pressure: See below
- Vacuum: Not rated

Designed for high-pressure, low-speed transfer of process fluid, these one-way flow joints have a nickel-plated carbon steel body, a fluoroelastomer/PTFE seal, and a bearing. All have a nickel-plated steel rotor shaft with right-hand threads. Connections: NPT.

Also Available: Rotating joints with left-hand rotor threads for drums and rolls that rotate clockwise. Please ask for 1122K2 and specify left-hand rotor threads and the corresponding right-hand part number below.

Rotor Thread Size	Port Thread Size	Max. Speed, rpm	Max. psi @ 72° F	Body Dia.	Lg.

2″	2″	80	2,900	3 15/16″	5 1/8″	1122K108	550.69

Warning! ***Rotating joints should not be operated at maximum speed and maximum pressure simultaneously.***

Rotating Joints & Swivel Joints

For information about selecting pipe size, see pages 2-3. For information about rotating joints, see page 112.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″
Pipe Size (NPT)	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	3″

Compact High-Speed Rotating Joints

- Use with air, hydraulic oil
- Temperature Range: –20° to +250° F
- Maximum Pressure: See below
- Vacuum: 28″ Hg @ 72° F

Great for tight spaces, use these compact joints with small air clutches and variable-pitch, hydraulic-actuated pulleys. All have an aluminum body, steel/carbon graphite seal, and a carbon steel rotor shaft with right-hand threads.

Rotor Connections: NPT or straight. Port Connections: NPT.

Also Available: Rotating joints with left-hand rotor threads for drums and rolls that rotate clockwise. Please ask for 6827K1 and specify left-hand rotor threads and the corresponding right-hand part number below.

Rotor Thread Size	Port Thread Size	Max. Speed, rpm	Max. psi @ 72° F for Oil★	Body Dia.	Lg.

★ Maximum pressure for air is 150 psi @ 72° F.

Rotating Joint Manifolds

- Use with air
- Temp. Range: –30° to +250° F
- Max. Pressure: 220 psi @ 72° F
- Vacuum: 28″ Hg @ 72° F

These joints supply an independent air flow to multiple stations—the unique design allows part of the joint to rotate while supplying air to rotating objects from a stationary air supply. The connections are sealed to allow different pressures and/or vacuum service to be supplied simultaneously through the ports.

All have a black 6061 anodized aluminum body and a long-life Buna-N (nitrile) O-ring for minimal pressure loss. Use them with air equipment such as indexing tables and packing equipment.

Connections: NPT.

Swivel Joints

Straight ***90° Elbow***

- Temperature Range: –20° to +225° F
- Maximum Pressure: See below
- Vacuum: 29″ Hg @ 72° F

Add flexibility to your rigid metal piping system without compromising reliability. Joints rotate 360° for occasional rotation, but are not designed for continuous rotational movement.

Joints have two rows of ball bearings, a Buna-N (nitrile) O-ring, and a pressure grease fitting. Connections: NPT.

Self-Aligning Swivel Joints

- Use with air, water, antifreeze
- Temperature Range: 0° to 400° F
- Max. Pressure: See below
- Vacuum: Not rated

A unique ball-joint design accommodates up to ±5° misalignment in your piping system. These 90° elbow swivel joints rotate 360° for occasional rotation, but are not designed for continuous rotational movement.

All have a malleable iron body with a bronze nut and ball; the ball is sealed with a PTFE O-ring for protection from dirt, grit, and other contaminants.

Connections: NPT.

Pipe Size	Max. psi @ 72° F		
1/2″	340	8685T11	$230.62
3/4″	340	8685T13	164.25
1″	340	8685T15	326.93
1 1/4″	300	8685T17	502.50
1 1/2″	300	8685T19	608.75

Warning! ***Rotating joints should not be operated at maximum speed and maximum pressure simultaneously.***

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID), as shown at right. Then, round up the measurement to the closest ID listed in the chart and select the corresponding pipe size. For example, if the ID measures 1 3/16″, the next highest ID in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Threaded ID	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″	4 1/2″
Pipe Size	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	3″	4″

Quick-Maintenance Swivel Joints

- Use with air, steam, antifreeze, hydraulic fluid, mineral oils, lubrication oils
- Temp. Range: –20° to +225° F
- Maximum Pressure: See below
- Vacuum: 20″ Hg @ 72° F

Just unscrew the nut and these joints are ready for maintenance without removing them from your line. They turn 360° for occasional rotation, but are not designed for continuous rotational movement.

Joints have a carbon steel body. Bearings have a Buna-N (nitrile) seal for protection from dirt, grit, and other contaminants.

Connections: NPT.

About Through-Wall Fittings

Through-wall fittings, which are also known as bulkhead fittings, allow you to make safe, quick inlets and outlets in plastic and metal tanks, walls, and panels for faucets, pipes, and spigots. To install, start by depressurizing and draining your tank. Cut a hole in your tank, slide the body of the fitting through the hole from the inside of the tank (make sure the gasket is against the inside tank wall), and tighten the nut on the outside of the tank.

Threaded female × threaded female connections allow you to make threaded connections both inside and outside of your tank.

Unthreaded female (socket end) × threaded female connections allow you to make an unthreaded pipe connection on one side of your tank and a threaded pipe or fitting connection on the other side.

Through-Wall Fittings

Mount these fittings in a hole on your wall, tank, or panel to serve as an inlet or outlet for faucets, pipes, and spigots. Also known as bulkhead fittings, each fitting consists of a body, gasket, and locking nut with wrench flats. They are for use on curved and flat surfaces, except the polyethylene fittings which are for flat tank walls only.

Connections: NPT (threaded) or unthreaded (socket end).

PVC is the most widely used plastic material due to its good strength, corrosion resistance, and rigidity. Use with water and antifreeze. Gasket is made of EPDM. Temperature range is 32° to 140° F. Vacuum is 29″ Hg @ 72° F. Color is dark gray.

Polypropylene has excellent chemical resistance. Use with hydrochloric and phosphoric acids. Gasket is made of EPDM. Temp. range is 32° to 180° F. Vacuum is 29″ Hg @ 72° F. Color is translucent white.

Polyethylene is a strong, bendable material. Use with water, antifreeze, and hydraulic oil. Gasket is made of EPDM. Temp. range is –20° to +140° F. Not rated for vacuum. Color is black.

PTFE is the choice for extreme corrosion resistance in high-purity, high-temperature applications. The gasket is made of FEP encapsulated in silicone. Use with water, air, oil, hydraulic oil, gasoline, diesel fuel, and antifreeze. Temperature range is –75° to +400° F. Vacuum is 30″ Hg @ 72° F. Color is white.

Type 316 stainless steel offers excellent corrosion resistance and high strength in high-temperature applications. Use with water and fertilizers. Gasket is made of EPDM. Temperature range is –20° to +300° F. Not rated for vacuum.

CPVC is similar to PVC, except it has the addition of chlorine which allows it to stand up to higher temperatures. Use with hot water. Gasket is made of EPDM. Temperature range is 32° to 180° F. Vacuum is 29″ Hg @ 72° F. Color is light gray.

Through-Wall Fittings

For information about selecting pipe size, see pgs. 2-3. For information about through-wall fittings, see pg. 115.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID), as shown at left. Then, round up the measurement to the closest ID listed in the chart and select the corresponding pipe size. For example, if the ID measures 1 3/16″, the next highest ID in the chart is 1 3/8″, and the corresponding pipe size is 1″.

Threaded ID	5/16″	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″	4 1/2″	6 5/8″

Through-Wall Fittings for Drinking (Potable) Water

- NSF 61 certified for use with drinking (potable) water
- Temp. Range: PVC: 40° to 140° F; CPVC: 40° to 200° F
- Max. Pressure: 150 psi @ 72° F
- Vacuum: 26″ Hg @ 72° F
- Use on curved and flat tanks

Similar to the through-wall fittings on the previous page, except these fittings are rated for use with drinking (potable) water. Also known as bulkhead fittings, mount them in a hole on your wall, tank, or panel to serve as an inlet or outlet. Each consists of a body, neoprene gasket, and round locking nut. Connections: NPT (threaded) or unthreaded (socket end).

PVC, which is ideal for cold water applications, is the most widely used plastic due to its good strength, corrosion resistance, and rigidity. Color is dark gray. ***CPVC*** is ideal for hot water applications. It is similar to PVC except it has the addition of chlorine, which allows it to stand up to higher temperatures. Color is light gray.

Miniature Through-Wall Fittings

The small size permits a through-wall connection in even the tightest spots. Mount them in a hole on your wall or panel to serve as an inlet or outlet. The PTFE and brass fittings can also be mounted in a flat tank wall. Each consists of a body and a locking nut with wrench flats. Connections: Thread sizes 10-32 and 1/4″-20 are straight threads; pipe sizes are NPT.

Acetal is for use with water, air, antifreeze, and isopropyl alcohol. Temperature range is -40° to +180° F. Vacuum is 25″ Hg @ 72° F. *White* fittings meet FDA (food and beverage). *Black* fittings are more rugged for heavy duty use.

Nylon is for use with water, air, and ethanol up to 72° F. Temperature range is -40° to +200° F. Vacuum is not rated. Color is natural.

PTFE is ideal for extreme corrosion resistance in high-temperature applications. Use with water, air, oil, hydraulic oil, gasoline, diesel fuel, and antifreeze. Fittings include an FEP encapsulated silicone gasket. Temperature range is -75° to +400° F. Vacuum is 30″ Hg @ 72° F. Color is white.

Brass is for use with water, air, oil, and hydraulic oil. Fittings include a steel gasket. Temperature range is -65° to +250° F. Vacuum is not rated.

Through-Wall Fittings with Compression Pipe Connections

- Use with water, hydraulic oil, lye, antifreeze
- Temperature Range: –35° to +180° F
- Maximum Pressure: Not rated
- Vacuum: Not rated
- Use on curved and flat tanks

Get a quick, liquid-tight connection on unthreaded pipe with these compression fittings. Simply insert the pipe and turn the end nuts until hand tight. Also known as bulkhead fittings, mount them in a hole on your tank, panel, or wall to serve as an inlet or outlet. They absorb vibration and provide flexibility to reduce stress. Fittings are glass-filled polypropylene and include a body, two thermoplastic elastomer gaskets, one round locknut, and one round compression nut. Color is black. Connections: Compression.

Pipe Size	Required Hole Size in Wall	Maximum Thickness of Wall	Lg. (A)	*For Curved Tanks*		*For Flat Tanks*

For information about selecting pipe size, see pgs. 2-3. For information about through-wall fittings, see pg. 115.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown at right. Then, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1³⁄₁₆″, the next highest ID or OD in the chart is 1³⁄₈″, and the corresponding pipe size is 1″.

Threaded ID or OD	³⁄₈″	¹⁄₂″	⁵⁄₈″	³⁄₄″	1″	1³⁄₈″	1⁵⁄₈″	1⁷⁄₈″	2³⁄₈″	3¹⁄₂″	4¹⁄₂″

Swivel PVC Through-Wall Fittings

- Use with water and antifreeze
- Temperature Range: 32° to 140° F
- Maximum Pressure: 75 psi @ 72° F
- Vacuum: 29″ Hg @ 72° F
- Use on curved and flat tanks

The swiveling ball-shaped connector inside these fittings allows you to adjust the connection angle on curved and flat tanks. Also known as bulkhead fittings, mount them through a hole in your tank, panel, or wall to serve as an inlet or outlet. Each consists of a PVC body, PTFE seal, EPDM gasket, and locking nut with wrench flats. Color is gray. Connections: NPSC (National Pipe Straight Coupling).

Type 316 Stainless Steel Bolt-On Through-Wall Fittings

- Use with water, air, oil, hydraulic oil, antifreeze
- Temperature Range: –20° to +180° F
- Maximum Pressure: Not rated
- Vacuum: Not rated
- Use on flat tanks only

Bolt these fittings right on to your tank for the strongest connection of all our through-wall fittings. Also known as bulkhead fittings, these fittings can be retightened and adjusted from the outside of the tank—no need to drain contents to make adjustments. Made of Type 316 stainless steel, each fitting has four Type 316 stainless steel bolts and an EPDM gasket. Maximum wall thickness is 1¹⁄₄″. Connections: NPT.

Threaded Tank Fittings

- Use with water, air, steam, oil, hydraulic oil, gasoline, diesel fuel
- Temp. Range: Not rated
- Max. Pressure: Not rated
- Vacuum: Not rated

Simply screw one of these fittings into a threaded hole on your tank for an easy through-wall connection. All have male threads on one end for connection to the tank, as well as female threads on both ends to make inlet or outlet connections. Made of cast iron, you can also use these fittings as pipe reducers in piping installations. Connections: NPT.

Weld-On Tank Fittings

Weld these fittings onto any tank, pressure vessel, or drum for a permanent inlet and outlet connection. They have a pilot taper that centers the fitting in the hole prior to welding. Not rated for pressure or vacuum. Connections: NPT.

Forged Carbon Steel

- Use with water, oil, hydraulic oil, gasoline, diesel fuel
- Temp. Range: 30° to 275° F
- Use on curved and flat tanks

Choose these fittings for their high strength. They conform to ASME Boiler and Pressure Vessel Code, Section II. They also meet ASTM A181/A181M-01, ASTM A105/A105M-03, and ANSI/ASME B1.20.1-1983.

Low-height fittings are ideal when space is a concern.

♦ Not rated for temperature.

Aluminum

- Use with water
- Temp. Range: Not rated
- Use on flat tank walls only

Made of aluminum alloy 6061-T6, these lightweight fittings meet ASTM B221.

About Plastic, Rubber, and Blended Plastic/Rubber Tubing

Many variables affect tubing, such as temperature, pressure, pump speed, and the fluid being conveyed through the tube. It is your responsibility to test and monitor the tubing to ensure it is appropriate for the intended application. Tubing is not intended nor recommended for medical applications.

Material Selector Packs— You'll get one individually marked piece of tubing in the materials listed. Each piece is 3″ long and is the most popular product within the material family.

		Per Pkg.
PVC, Polyurethane, Polypropylene, Polyethylene, EVA	3077K1	$3.58
Nylon, PTFE, PVDF, PEEK	3077K2	10.65
Rubber, Blended Rubber/Plastic	3077K3	7.30

Bend Radius (Flexibility)— Indicates how far you can bend tubing before damaging it. The smaller the measurement, the better the flexibility. Bend radius is measured from the center of the bend to the edge of the tube.

Bend Radius Selector Pack— You'll get seven pieces of tubing, ranging in lengths from 12″ to 30″. Each piece of tubing is marked with the bend radius: ⅝″, 1¾″, 3⅛″, 5″, 6″, 8″, and unbendable.

	Per Pkg.
3077K4	$24.85

Color and Clarity— *Clear* and *transparent-colored* tubing allow you to see what's flowing through your line. With *semi-clear* tubing, you can see that there is something in your line, but the view is limited. With *opaque* tubing, you cannot see what is in your tubing.

Temperature/Pressure— As temperature rises, the amount of pressure tubing can withstand will decrease.

Tensile Strength— The breaking strength of material when stretched.

Fittings— Tubing hardness determines which tube fitting you should use. *Barbed Fittings:* Tubing slides over barbs to form a seal; use a tube or hose clamp to secure hose to fitting. *Compression* and *Instant Fittings:* Both styles form a seal around the tubing. *Note*: "Use with Fittings Style(s)" below represents all the fittings that can be used with a material. Please see the individual tubing presentations for fitting recommendations.

Wall Hardness (Durometer)— Measured on a Shore A, Shore D, or Rockwell R scale, the chart below shows a comparison for these scales.

Wall Hardness (Durometer) Selector Pack— This pack includes nine pieces of tubing. Each piece is 3″ long and is individually marked with its durometer: Shore A 35, 40, 55, 65, 74, 85; Shore D 43-55, 65; and Rockwell R 120.

	Per Pkg.
3077K5	$11.41

Tubing Material	Tubing Features	Use with Fitting Style(s)	Tubing Page(s)
PVC	This flexible material is a popular choice not only because it's economical, but also because it's versatile.	Barbed	119-127
Polyurethane	Flexible like PVC, except with higher abrasion resistance.	Barbed	127-129
Polyethylene	An alternative to polyurethane. Not as clear or soft as PVC.	Barbed, compression, and instant	129-131
EVA	A blend of polyethylene and vinyl acetate, it stays flexible at low temperatures.	Barbed and compression	131-132
Polypropylene	Not only can this material handle higher temperatures than polyethylene, it is also harder and stronger.	Compression	132
Nylon	Hard materials with high impact resistance.	Compression	132-134
Polycarbonate	Rigid material with an excellent balance between toughness and clarity.	Use adhesives	134
Acetal	Rigid, hard, and durable, acetal absorbs less moisture than nylon.	Compression	134
ETFE, PTFE, FEP, PFA	Very smooth, friction-resistant surface. Unaffected by most chemicals. Made without a plasticizer that can contaminate fluid passing through.	Compression	134-137
PVDF	Also known as Kynar, this tubing resists abrasion and UV. Made without a plasticizer that can contaminate fluid passing through tube.	Compression	137-138
THV	Clearer than FEP, PTFE, and PFA tubing for better flow and visibility.	Compression	138
PEEK	Offers superior impact and chemical resistance with a wide temperature range.	Compression	138
Buna-N (Nitrile) Rubber	Harder than natural rubber yet less resilient.	Barbed	138
Latex Rubber	Soft with very good impact and abrasion resistance. It's highly elastic and will resume its original shape after bending and stretching.	Barbed	139
Gum Rubber	Not as soft as latex, but has excellent impact and abrasion resistance.	Barbed	139
Viton® Fluoroelastomer Rubber	Excellent chemical and UV resistance. Can withstand higher temperatures than any other rubber tubing with the exception of silicone.	Barbed	140
Neoprene Rubber	Good resistance to weathering, oxidation, and acid. Harder than natural rubber yet less resilient.	Clamps	140
EPDM Rubber	Weather resistant with a high tear strength.	Barbed and instant	140
Synthetic Rubber	Great for outdoor use, it resists ozone and abrasion.	Clamps	140
Silicone Rubber	Remains soft and flexible over a wide temperature range.	Barbed	141-142
Blended Rubber/ Plastic	Also called thermoplastic elastomer, this highly durable material combines the best performance characteristics of rubber and plastic. It's soft, flexible, and resistant to fatigue.	Barbed and compression	142-143

For information about tubing, see page 118.

Masterkleer PVC Tubing

- Very flexible
- Wall Hardness: Soft (Shore A: 67)
- Temperature Range: –45° to +165° F
- Tensile Strength: 2450 psi
- Use barbed fittings (see pages 156-165)

Easily monitor what's flowing through your line—this PVC tubing comes in clear as well as a selection of transparent colors so you can easily identify different lines within your system. Also known as vinyl, PVC is the most common plastic material for low-pressure conveying applications. Use with water and air; ***clear*** tubing is FDA CFR21 175.300 compliant and can also be used with food and beverage. All tubing can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed. Also, for *Transparent Choose-a-Color* tubing, please specify color: blue, green, orange, or red.

Choose-a-Color PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 78)
- Temperature Range: –20° to +180° F
- Tensile Strength: 2200 psi
- Use barbed and compression fittings (see pages 156-179)

You can identify lines at a glance when you use this opaque PVC tubing to color-code different lines within your system. Also known as vinyl, PVC is the most common plastic material for low-pressure conveying applications. Use with water and air. This tubing can be sterilized with steam (autoclaving). Not rated for bend radius or vacuum.

To Order: Please specify color: black, blue, green, red, or yellow, and length from the available lengths listed.

High-Pressure Clear PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 73)
- Temperature Range: 25° to 150° F
- Tensile Strength: 2465 psi
- Use barbed fittings (see pages 156-165)

Polyester-braid reinforcement is embedded into the walls of this tubing, giving it extra strength to stand up to higher working pressures than nonreinforced PVC tubing. Due to the braid reinforcement, this tubing is sometimes referred to as hose. This tubing is clear, so you can easily monitor the flow of your line. Use with water, air, food and beverage, and deionized water. Material is FDA CFR21 170-199 compliant. It can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

3-A Sanitary Clear PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 70)
- Temperature Range: –10° to +175° F
- Tensile Strength: 2200 psi
- Use barbed fittings (see pages 156-165)

With a nonabsorbing surface that resists bacterial growth, this PVC tubing facilitates thorough cleansing, won't impart taste, and meets 3-A sanitary requirements. It is clear, so you can easily monitor the flow of your line. Use with dairy as well as water and food and beverage. Material is FDA CFR21 175.300 and USDA compliant; it is also NSF 51 certified. This tubing can be cleaned with alkaline-based cleaners and sanitizers; it can be sterilized with steam (autoclaving), gas, and chemicals. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Beverage, Food, and Dairy Clear Tygon PVC Tubing

Beverage

- Tygon Formulation: B-44-3
- Very flexible
- Wall Hardness: Soft (Shore A: 63)
- Temperature Range: –49° to +165° F
- Tensile Strength: 2300 psi
- Use barbed fittings (see pages 156-165)

Food and Dairy

- Tygon Formulation: B-44-4X
- Very flexible
- Wall Hardness: Soft (Shore A: 65)
- Temperature Range: –47° to +165° F
- Tensile Strength: 2100 psi
- Use barbed fittings (see pages 156-165)

Odor-free with a nonabsorbing surface, this PVC tubing won't impart taste, plus it resists bacterial growth. All of this tubing is FDA CFR21 175.300 compliant, NSF 51 certified, and for use with water and air. The ***food and dairy*** tubing is also for use in dairy applications and meets 3-A sanitary requirements. All tubing is clear, so you can easily monitor the flow of your line. It can be cleaned with alkaline-based cleaners and sanitizers, and sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

High-Pressure 3-A Sanitary Clear PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 73)
- Temperature Range: 25° to 150° F
- Tensile Strength: 2538 psi
- Use barbed fittings (see pages 156-165)

Reinforced with a polyester braid for extra strength in high-pressure applications, this tubing also meets 3-A sanitary requirements. Due to the braid reinforcement, this tubing is sometimes referred to as hose. It's made of clear PVC, so you can easily monitor the flow of your line. Use with dairy as well as drinking (potable) water, air, and food and beverage. Material is FDA CFR21 170-199 and USDA compliant, and NSF 51 and 61 certified. It can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

High-Pressure Clear Tygon PVC Tubing

- Tygon Formulation: B-44-4X I.B.
- Very flexible
- Wall Hardness: Soft (Shore A: 65)
- Temperature Range: –47° to +165° F
- Tensile Strength: 2100 psi
- Use barbed fittings (see pages 156-165)

Thanks to the polyester-braid reinforcement, this tubing has superior strength to handle up to four times more pressure than the nonreinforced Tygon food and dairy tubing on page 120. Due to the braid reinforcement, this tubing is sometimes referred to as hose. This clear material will not impart taste or odors, plus you can easily monitor the flow of your line. Use with water, air, food and beverage, and dairy. Material meets 3-A sanitary requirements; it is also FDA CFR21 175.300 compliant and NSF 51 certified. It can be cleaned with alkaline-based cleaners and sanitizers and sterilized with steam (autoclaving). Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

3-A Sanitary Clear PVC Vacuum Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 73)
- Temperature Range: 25° to 150° F
- Tensile Strength: 2538 psi
- Use barbed fittings (see pages 156-165)

Not only does this clear PVC tubing meet 3-A sanitary requirements, it's reinforced with steel wire so it can handle vacuum applications up to 29.9" Hg @ 70° F. The wire reinforcement also supports this tubing in high-pressure applications and makes it kink resistant. Due to the wire reinforcement, this tubing is sometimes referred to as hose. This tubing is clear, so you can easily monitor what's flowing through your line. Use with dairy as well as drinking (potable) water, air, and food and beverage. Material is FDA CFR21 170-199 and USDA compliant, and NSF 51 and 61 certified. It can be sterilized with steam (autoclaving) and gas.

To Order: Please specify length from the available lengths listed.

High-Pressure 3-A Sanitary Clear PVC Tubing with Fittings Attached

- Flexible
- Wall Hardness: Firm (Shore A: 80)
- Temperature Range: –25° to +150° F
- Tensile Strength: 2465 psi

This ready-to-use tubing is furnished with the fittings attached for quick and easy connections. Tubing is made of PVC with a nylon-braid reinforcement that stands up to high-pressure applications. Due to the braid reinforcement, this tubing is sometimes referred to as hose. It has a nonabsorbing surface that resists bacterial growth. And because this tubing is clear, you can monitor the flow of your line. Use with dairy as well as drinking (potable) water, air, and food and beverage. Material meets 3-A sanitary requirements; it is also FDA CFR21 170-199 and USDA compliant. This tubing can be cleaned with alkaline-based cleaners and sanitizers and sterilized with gas and radiation. Not rated for bend radius or vacuum.

Tube ID	Tube OD	Max. psi @ 70° F	Pipe Size	2-ft. Lengths	Each	4-ft. Lengths	Each

High-Pressure/Vacuum 3-A Sanitary Clear PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 73)
- Temperature Range: 15° to 150° F
- Tensile Strength: 2465 psi
- Use barbed fittings with clamps (see pgs. 156-165 and 274-275)

Two kinds of reinforcement—a high-tensile yarn braid and a steel wire spiral—give this tubing extra strength to handle high pressures as well as vacuum up to 29.9″ Hg @ 70° F. Due to the reinforcement, this tubing is sometimes referred to as hose. This tubing is also kink resistant. It is clear, so you can easily monitor the flow of your line. Use with dairy as well as drinking (potable) water and food and beverage. Material meets 3-A sanitary requirements; it is also FDA CFR21 170-199 and USDA compliant, and NSF 51 and 61 certified. This tubing can be sterilized with steam (autoclaving) and gas.

To Order: Please specify length from the available lengths listed.

ID	OD	Wall	Bend Radius	Max. psi @ 70° F	Available Lengths, ft.		Per Ft. ♦

Laboratory Clear Tygon PVC Tubing

- Tygon Formulation: R-3603
- Very flexible
- Wall Hardness: Soft (Shore A: 55)
- Temperature Range: –58° to +165° F
- Tensile Strength: 1650 psi
- Use barbed fittings (see pgs. 156-165)

Commonly found in laboratories, this clear Tygon tubing is relatively soft, which makes it ideal for use with peristaltic (squeeze-action) pumps. This tubing is clear, so you can easily monitor the flow of your line. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 175.300 compliant. It can be sterilized with steam (autoclaving) and gas. ***Standard*** tubing is not rated for vacuum. ***Vacuum-rated*** tubing has a vacuum rating of 29.9″ Hg @ 73° F.

Chemical-Resistant Clear PVC Tubing

- Very flexible
- Wall Hardness: Soft (Shore A: 60)
- Temperature Range: –25° to +160° F
- Tensile Strength: 1650 psi
- Use barbed fittings (see pages 156-165)

The most common choice for chemical applications, this tubing is also relatively soft, making it ideal for use with peristaltic (squeeze-action) pumps. It's made of clear PVC, so you can easily monitor the flow of your line. Use with water, air, food and beverage, and bleach. Material is FDA CFR21 175.300 and USDA compliant. It can be sterilized with steam (autoclaving), gas, and chemicals. ***Standard*** tubing is not rated for vacuum. ***Vacuum-rated*** tubing has a vacuum rating of 29.9" Hg @ 73° F.

Chemical-Resistant Clear Tygon Tubing

- Tygon Formulation: 2375
- Very flexible
- Wall Hardness: Firm (Shore A: 75)
- Temperature Range: –103° to +130° F
- Tensile Strength: 1,900 psi
- Use barbed fittings (see pages 156-165)

If you're looking for a good combination of chemical resistance, clarity, and flexibility, this is the tubing for you. It is made without a plasticizer additive that can contaminate fluid passing through the line. Plus this tubing is clear, so you can easily monitor flow. Use with water, air, food and beverage, ethylene glycol, and bleach. Material is FDA CFR21 175.1520 compliant. It can be sterilized with gas and radiation. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Ultra-Chemical-Resistant Clear Tygon PVC Tubing

- Tygon Formulation: SE-200
- Very flexible
- Wall Hardness: Soft (Shore A: 67)
- Temperature Range: –40° to +170° F
- Tensile Strength: 2000 psi
- Use single barbed fittings (see pgs. 156-165)

Lined with FEP (fluorinated ethylene propylene), this tubing provides higher resistance to chemicals than the chemical-resistant Tygon tubing on this page, while offering equal clarity and flexibility. The FEP liner is inert, so it won't impart taste or odors. Use with water, air, food and beverage, hydraulic oil, and ethylene glycol. Material is FDA CFR21 177.1550 compliant. It can be sterilized with gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the PVC tubing on this page, go to mcmaster.com and search for **5187KAC**.

Fuel and Lubricant Yellow PVC Tubing

- Very flexible
- Wall Hardness: Soft (Shore A: 65)
- Temperature Range: –15° to +165° F
- Tensile Strength: 1900 psi
- Use barbed fittings (see pages 156-165)

Keep your fuel and lubricant lines flexible—you can use this tubing with gasoline, kerosene, heating oils, cutting compounds, and coolants without causing it to become hard or brittle. You can also use it with water and air. This tubing is transparent yellow, so you can easily monitor the flow of your line. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Fuel and Lubricant Yellow Tygon PVC Tubing

- Tygon Formulation: F-4040-A
- Very flexible
- Wall Hardness: Soft (Shore A: 57)
- Temperature Range: –35° to +165° F
- Tensile Strength: 1820 psi
- Use barbed fittings (see pages 156-165)

Not only will this tubing remain flexible when used with gasoline, kerosene, biodiesel, heating oils, cutting compounds, and coolants, it also withstands lower temperatures than other fuel and lubricant tubing. This tubing is transparent yellow, so you can easily monitor the flow of your line. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Abrasion-Resistant Clear PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 80)
- Temperature Range: –31° to +122° F
- Tensile Strength: 3000 psi
- Use barbed fittings (see pages 156-165)

This clear PVC tubing has the highest strength and abrasion resistance of any PVC tubing we offer, plus it remains flexible at low temperatures. Use with water, air, food and beverage, and ethylene glycol. Material is FDA compliant. It can be sterilized with gas. Not rated for bend radius or vacuum.

To Order: Please specify length from the available lengths listed.

Antibacterial Gray PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 70)
- Temperature Range: 25° to 150° F
- Tensile Strength: 2103 psi
- Use barbed fittings (see pages 156-165)

Specially formulated to resist the growth of bacteria, yeast, fungi, and mold, this semi-transparent gray PVC tubing is ideal for use as drain tubing in ice machines and in other water-related applications. It can be sterilized with steam (autoclaving) and gas. Not rated for pressure or vacuum.

To Order: Please specify length from the available lengths listed.

UV-Resistant Black PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 70)
- Temperature Range: –10° to +175° F
- Tensile Strength: 2400 psi
- Use barbed fittings (see pages 156-165)

Protect light-sensitive fluid with this opaque black tubing. It resists degradation caused by exposure to ozone and UV light, making it ideal for outdoor use. Use with water, air, food and beverage, ethylene glycol, and bleach. Material is FDA CFR21 175.300 compliant. It can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

UV-Resistant Black Tygon PVC Tubing

- Tygon Formulation: R-3400
- Very flexible
- Wall Hardness: Soft (Shore A: 64)
- Temperature Range: –6° to +165° F
- Tensile Strength: 2250 psi
- Use barbed fittings (see pages 156-165)

Ideal for outdoor use, this opaque black tubing will protect your light-sensitive fluids. It resists degradation caused by exposure to ozone and UV light. Use with water, air, and ethylene glycol. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

High-Flex White PVC Tubing

- Very flexible
- Wall Hardness: Soft (Shore A: 50)
- Temperature Range: –67° to +180° F
- Tensile Strength: 1400 psi
- Use barbed fittings (see pages 156-165)

An economical alternative to silicone tubing, this semi-transparent white PVC tubing offers very good flex life. Ideal for use with peristaltic (squeeze-action) pumps, it's also a good nonallergenic alternative to latex. Use with water and food and beverage. Material is FDA CFR21 177.1520 compliant. This tubing can be sterilized with gas and radiation. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Long-Flex-Life Clear Tygon PVC Tubing

- Tygon Formulation: LFL
- Very flexible
- Wall Hardness: Soft (Shore A: 56)
- Temperature Range: –65° to +165° F
- Tensile Strength: 1550 psi
- Use barbed fittings (see pages 156-165)

Offering excellent wear resistance, this clear tubing has the longest flex life of any Tygon PVC tubing we offer. It is soft, which makes it ideal for use with peristaltic (squeeze-action) pumps. And because it's clear, you can easily monitor the flow of your line. Use with water and food and beverage. Material is FDA CFR21 175.300 compliant. This tubing can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Ultra-Soft Clear Tygon PVC Tubing

- Tygon Formulation: R-1000
- Very flexible
- Wall Hardness: Very soft (Shore A: 40)
- Temperature Range: –75° to +125° F
- Tensile Strength: 1200 psi
- Use barbed fittings (see pages 156-165)

Looking for an excellent alternative to silicone tubing? This tubing will outlast silicone tubing at a rate of 2 to 1 in peristaltic (squeeze-action) pump applications. It is clear to allow you to monitor the flow in your line, plus it's super soft and resistant to many corrosive chemicals. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 175.300 compliant. It can be sterilized with gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

High-Purity White Tygon Tubing

- Tygon Formulation: 2001
- Very flexible
- Wall Hardness: Soft (Shore A: 69)
- Temperature Range: –108° to +135° F
- Tensile Strength: 800 psi
- Use barbed fittings (see pages 156-165)

Made without a plasticizer additive that can contaminate fluid passing through it, this semi-transparent tubing won't impart taste or odors. This tubing is soft, which makes it ideal for use in peristaltic (squeeze-action) pump applications. Use with water, deionized water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.2600(e) compliant. It can be sterilized with steam (autoclaving), gas, and radiation. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Smooth-Bore High-Purity Clear Tygon Tubing

- Tygon Formulation: Standard: 2475, High Pressure: 2475 I.B.
- Wall Hardness: Firm (Shore A: 72)
- Very flexible
- Temperature Range: –94° to +125° F
- Tensile Strength: 2000 psi
- Use barbed fittings (see pages 156-165)

When it comes to food handling, this tubing is the whole package. It has a smooth bore that resists material buildup and the absorption of water-based fluids. This tubing is also high purity, which means it is made without a plasticizer additive that can contaminate fluid passing through it. And because it's clear, you can easily monitor the flow of your line. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1520 compliant. It can be sterilized with gas and radiation. Vacuum rating is 29.9″ Hg @ 73° F, unless noted.

High-pressure tubing has a nylon braid reinforcement, which gives it extra strength to handle higher pressures than standard tubing. Due to the braid reinforcement, this tubing is sometimes referred to as hose.

To Order: Please specify length from the available lengths listed.

Antistatic Clear PVC Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 73)
- Temperature Range: –5° to +175° F
- Tensile Strength: 2000 psi
- Use barbed or compression fittings (see pages 156-179)

Protect sensitive equipment—a metal wire coil is embedded into the walls of this tubing to dissipate static electricity without the need for grounding. This tubing is clear, so you can easily monitor the flow of your line. Use with water, air, ethylene glycol, and bleach. Not rated for sterilization. Vacuum rating is 29.8″ Hg @ 70° F.

To Order: Please specify length from the available lengths listed.

Ultra-Clear Tygon PVC Tubing

- Tygon Formulation: S-50-HL
- Very flexible
- Wall Hardness: Soft (Shore A: 66)
- Temperature Range: –55° to +165° F
- Tensile Strength: 2000 psi
- Use barbed fittings (see pages 156-165)

Get optimal visibility—this ultra-clear tubing makes it easy to monitor the flow of your line, plus it's kink resistant for restriction-free flow. Use with water, air, and ethylene glycol. It can be sterilized with steam (autoclaving), gas, and radiation. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Hard-Wall Rigid Clear PVC Tubing

- Rigid
- Wall Hardness: Hard (Shore D: 81)
- Temperature Range: –50° to +140° F
- Tensile Strength: 7000 psi

Don't be fooled by this tubing—it is hard, rigid, nonbendable, and straight like pipe, but sized to the tubing industry's standards. This tubing is clear, so you can easily monitor what's flowing through your line. Use with water, air, food and beverage, dairy, oils, and hydraulic fluid. Material is FDA CFR21 177.1520 compliant, NSF 51 certified, and meets 3-A sanitary requirements. It can be sterilized with gas and chemicals. Vacuum rating is 29.75″ Hg @ 73° F.

To Order: Please specify 1-, 3-, or 6-ft. length.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

Abrasion-Resistant Clear PVC/Polyurethane Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 80)
- Temperature Range: –10° to +170° F
- Tensile Strength: 2100 psi
- Use barbed fittings (see pages 156-165)

Get the clarity and flexibility of PVC combined with the abrasion resistance of polyurethane. This blended tubing is clear, so you can easily monitor the flow of your line. Use with water, deionized water, air, and food and beverage. Material is FDA CFR21 175.300 compliant. Not rated for sterilization, pressure, or vacuum.

To Order: Please specify length from the available lengths listed.

Soft Abrasion-Resistant Blue Polyurethane Tubing

- Very flexible
- Wall Hardness: Soft (Shore A: 68)
- Temperature Range: –40° to +180° F
- Tensile Strength: 2434 psi
- Use barbed or compression fittings (see pages 156-179)

Ideal for use with peristaltic (squeeze-action) pumps, this ester-based polyurethane tubing combines softness with high abrasion resistance and tear strength. It is transparent blue, so you can easily monitor what's flowing through your line. Unlike other polyurethane tubing, this tubing is specially formulated for use with water; also use with ethylene glycol. It can be sterilized with gas and radiation. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Abrasion-Resistant Clear Polyurethane Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 85)
- Temperature Range: –70° to +175° F
- Tensile Strength: 5000 psi
- Use barbed fittings (see pages 156-165)

Abrasion resistant with high tear strength, this rugged ester-based polyurethane tubing performs well at low temperatures. It is clear, so you can easily monitor the flow of your line. Use with air, bleach, and food. Material is FDA CFR21 177.2600 compliant. It can be sterilized with gas. Not rated for vacuum.

Note: Do not use with water. Water will degrade this tubing and adversely affect the physical properties.

To Order: Please specify length from the available lengths listed.

Abrasion-Resistant Clear Tygothane Polyurethane Tubing

- Tygon Formulation: C-210-A
- Flexible
- Wall Hardness: Firm (Shore A: 82)
- Temperature Range: –100° to +175° F
- Tensile Strength: 6050 psi
- Use barbed fittings (see pages 156-165)

Made of ester-based polyurethane, this tubing has a high tear strength, won't impart taste or odors, and performs well at low temperatures. It is clear, so you can easily monitor what's flowing through your line. Use with air, food, and biodiesel. Material is FDA CFR21 177.2600(e) compliant. It is not rated for sterilization or vacuum.

Note: Do not use with water. Water will degrade this tubing and adversely affect the physical properties.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

Polyurethane Joined Tubing for Drinking Water

- Very flexible
- Wall Hardness: Firm (Shore A: 85, unless noted)
- Temperature Range: –40° to +165° F
- Tensile Strength: 5000 psi
- Use barbed fittings (see pages 156-165)

No need for cable ties or tape—this multiple-line tubing holds together on its own. Made of ether-based polyurethane, it offers better abrasion resistance and higher tear strength than PVC tubing. This tubing is NSF 61 certified for use with drinking (potable) water. Not rated for sterilization. Vacuum rating is 28″ Hg @ 72° F.

Single-Color Tubing—Manufactured as one piece, this tubing is permanently joined. It comes in a choice of two colors; all tubes will be the color you select. **To Order:** Please specify color and length from the available lengths listed.

Multicolor Tubing—Manufactured as separate tubes then bonded together, this tubing holds together until you separate it. Multiple colors make it easy to identify lines. **To Order:** Please specify length from the available lengths listed.

♣ Hardness is Shore A: 90.

High-Pressure Polyurethane Tubing for Drinking Water

- Very flexible
- Wall Hardness: Firm (Shore A: 85)
- Temperature Range: –40° to +165° F
- Tensile Strength: 5000 psi
- Use barbed fittings (see pages 156-165)

Reinforced with a polyester braid for strength, this tubing can withstand high pressure. Due to the braid reinforcement, this tubing is sometimes called hose. It's made of ether-based polyurethane, which is more abrasion resistant and has a higher tear strength than PVC tubing. This tubing is clear, so you can easily monitor the flow of your line. It's NSF 61 certified for use with drinking (potable) water. Not rated for sterilization.

Reinforced tubing is clear and has a vacuum rating of 28″ Hg @ 72° F.

Extra-flex reinforced tubing has thinner walls to give it more flexibility. It is transparent blue and is not rated for vacuum.

To Order: Please specify length from the available lengths listed.

High-Pressure Clear Tygothane Polyurethane Tubing

- Tygon Formulation: C-544-A I.B.
- Very flexible
- Wall Hardness: Firm (Shore A: 85)
- Temperature Range: –100° to +180° F
- Tensile Strength: 5000 psi
- Use barbed fittings (see pages 156-165)

Similar to the polyurethane tubing for drinking water, but this tubing can also be used with food and beverage. It is made of ether-based polyurethane and reinforced with polyester braid for strength. Due to the braid reinforcement, this tubing is sometimes referred to as hose. This tubing won't impart taste or odors and is abrasion resistant with high tear strength. And because it's clear, you can easily monitor the flow of your line. Material is FDA CFR21 177.2600 compliant and NSF 61 certified. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Choose-a-Color Polyurethane Tubing for Drinking Water

- Very flexible
- Wall Hardness: Hard (Shore A: 95)
- Temperature Range: –40° to +165° F
- Tensile Strength: 6000 psi
- Use push-to-connect fittings (see pgs. 185-201); inch sizes also accept barbed and compression fittings (see pgs. 156-179)

Color-code your water lines for easy identification. This ether-based polyurethane tubing offers better abrasion resistance and higher tear strength than PVC tubing. It's NSF 61 certified for use with drinking (potable) water. Not rated for sterilization. Vacuum rating is 28″ Hg @ 72° F.

Opaque tubing comes in black, blue, green, red, white, and yellow, unless noted. ***Clear*** tubing allows you to monitor what's flowing through your line; it comes in blue, clear, green, red, and yellow.

To Order: Please specify color as well as length from the available lengths listed.

★ Not available in white. ■ Available in black only.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the polyurethane and polyethylene tubing on this page, go to mcmaster.com and search for **9148TAC**.

Self-Retracting Choose-a-Color Polyurethane Tubing

- Very flexible
- Wall Hardness: Hard (Shore A: 95)
- Temperature Range: –40° to +125° F
- Tensile Strength: 6000 psi
- Use barbed fittings (see pages 156-165)

Keep your work site safe and clutter free—this coiled tubing extends when you need it and retracts out of the way when you don't. Made of ether-based polyurethane, it offers better abrasion resistance and higher tear strength than PVC tubing. It meets NSF 61 and is for use with drinking (potable) water and air. Not rated for sterilization or bend radius. Vacuum rating is 28″ Hg @ 75° F.

Comes in transparent blue, as well as the following opaque colors: dark blue, neon green, red, and yellow. **To Order:** Please specify color.

ID	OD	Wall	Max. psi @ 75° F	Coil OD	Coil Lg. Retracted	Coil Lg. Extended		Each

Antistatic White Polyurethane Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 85)
- Temperature Range: –40° to +165° F
- Tensile Strength: 4700 psi
- Use barbed fittings (see pages 156-165)

Prevent electrostatic discharge with this opaque white tubing. Made of specially formulated ether-based polyurethane, this tubing offers better abrasion resistance and higher tear strength than PVC tubing. Use with water, air, hydraulic oil, and mineral oil. Not rated for sterilization. Vacuum rating is 28″ Hg @ 75° F.

To Order: Please specify length from the available lengths listed.

Large-Diameter Thin-Wall Clear Polyurethane Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 82)
- Temperature Range: –40° to +180° F
- Tensile Strength: 4700 psi
- Use worm drive clamps (see pages 274-275)

A large diameter makes this tubing useful with vibrating sifters, screeners, hoppers, and packaging equipment. Made of abrasion-resistant ether-based polyurethane, this tubing won't build up or conduct static in moist environments. It has thin walls, so it is more flexible than our other polyurethane tubing. This tubing is clear, so you can easily monitor the flow of your line. Use with water, food and beverage, and dairy. It is FDA CFR21 177.2600 compliant and meets 3-A sanitary requirements. Not rated for bend radius, sterilization, pressure, or vacuum.

To Order: Please specify length in 1-ft. increments up to 50 feet.

Water-Resistant Clear Polyurethane Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 84)
- Temperature Range: –70° to +175° F
- Tensile Strength: 5500 psi
- Use barbed fittings (see pages 156-165)

Other polyurethane tubing may let water get the best of them, but not this one—this ether-based tubing shrugs off water and maintains its integrity. This tubing is clear, so you can easily monitor the flow of your line. It is more abrasion resistant than PVC tubing with a higher tear strength, plus it's made without a plasticizer additive that can contaminate fluid passing through it. Use with water, air, and food and beverage. Material is FDA compliant. It can be sterilized with gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Weld-Spatter-Resistant Choose-a-Color Polyurethane Tubing

- Flexible
- Wall Hardness: Hard (Shore A: 95)
- Temperature Range: –40° to +180° F
- Tensile Strength: Not rated
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

Made to UL 94V2 standards, this super-tough tubing is resistant to weld spatter, flames, and abrasion. It's made of a specially formulated ether-based polyurethane that's self-extinguishing. Use with water and air. Not rated for sterilization. Vacuum rating is 28″ Hg @ 73° F.

This tubing comes in four opaque colors: black, blue, green, and white. **To Order:** Please specify color as well as length from the available lengths listed.

ID	OD	Wall	Bend Radius	Max. psi @ 73° F	Available Lengths, ft.		Per Ft. ♦

Flexible White Polyethylene Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 82)
- Temperature Range: –60° to +120° F
- Tensile Strength: 1625 psi
- Use barbed fittings with a clamp (see pages 156-165 and 274-275)

Softer and more flexible than our other polyethylene tubing, this semi-clear white tubing has polyester braid reinforcement for added strength in pressure applications. Use with water, air, food and beverage, and ethylene glycol. Material is FDA compliant. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

ID	OD	Wall	Bend Radius	Max. psi @ 70° F	Available Lengths, ft.		Per Ft. ♦
1/4″	0.46″	0.105″	2 1/2″	150	10, 25, 50, 100	9336T1	$0.69

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the polyethylene tubing on this page, go to mcmaster.com and search for **5181KAC**.

Crack-Resistant Polyethylene Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 95)
- Temperature Range: –100° to +175° F
- Tensile Strength: 2800 psi
- Use compression fittings (see pgs. 165-179)

This linear low-density polyethylene (LLDPE) tubing has superior stress-crack resistance and remains flexible at low temperatures. Made without a plasticizer that can contaminate fluid passing through, it won't impart tastes or odors. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1520 compliant. Not rated for sterilization or vacuum.

Choose-a-color tubing allows you to color-code your lines for easy identification.

To Order: Please specify length from the available lengths listed. For Choose-a-Color tubing, also please specify color: opaque blue, green, orange, red, or yellow.

High-Pressure Polyethylene Vacuum Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 65)
- Temperature Range: –100° to +180° F
- Tensile Strength: 3900 psi
- Use compression fittings (see pgs. 165-179)

Even though no extra reinforcement has been added, this high-density polyethylene (HDPE) tubing can withstand high pressures as well as vacuum up to 29.9″ Hg @ 73° F. This tubing is made without a plasticizer that can contaminate fluid passing through, so it won't impart tastes or odors. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1520 compliant. It can be sterilized with gas and chemicals.

To Order: Please specify length from the available lengths listed.

Moisture-Resistant Polyethylene Vacuum Tubing

- Flexible
- Wall Hardness: Firm (Shore D: 44)
- Temperature Range: –40° to +150° F
- Tensile Strength: 4298 psi
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

Impermeable to moisture, this low-density polyethylene (LDPE) tubing is also resistant to a broad range of chemicals and gases. This tubing will withstand vacuum up to 28″ Hg @ 75° F. It is made without a plasticizer that can contaminate fluid passing through, so it won't impart tastes or odors. While this tubing is flexible, it will crack if subjected to continual flexing. Use with water, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1520 compliant for all, except for the red color (inch-size) tubing. Not rated for sterilization.

Inch tubing comes in semi-clear white, as well as opaque black, blue, green, red, and yellow. ***Metric*** tubing comes in opaque black and semi-clear white. **To Order:** Please specify color as well as length from the available lengths listed.

For information about the chemical compatibility of the polyethylene and EVA tubing on this page, go to mcmaster.com and search for **9334TAC**.

Antimicrobial Blue Polyethylene Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 92)
- Temperature Range: –40° to +170° F
- Tensile Strength: Not rated
- Use antimicrobial barbed fittings (see page 160)

A silver lining inside this opaque blue polyethylene tubing inhibits the growth of bacteria, mold, fungi, and other microbes. Use with water and food. It can be sterilized with gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

High-Temperature White Polyethylene Tubing

- Flexible
- Wall Hardness: Hard (Shore A: Not rated)
- Temperature Range: 73° to 180° F
- Tensile Strength: 2900 psi
- Use barbed fittings (see pages 156-165)

Made of cross-linked polyethylene, which is also known as PEX, this opaque white tubing is ideal for high-temperature water applications in plumbing and hydronic radiant heating systems. Material meets NSF 61 standards and is IAPMO (International Association of Plumbing and Mechanical Officials) approved to ASTM F876 and F877 standards. Maximum pressure is 160 psi @ 73° F. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Tube Size ♠	Actual Tube OD	ID	Wall	Bend Radius	Available Lengths, ft.		Per Ft. ♦

♠ Tube size is the accepted designation of the copper tubing industry. Not an actual size.

Flame-Retardant Polyethylene Tubing

- Flexible
- Wall Hardness: Hard (Shore A: 99)
- Temperature Range: –70° to +175° F
- Tensile Strength: 1900 psi
- Use barbed, compression, and push-to-connect fittings (see pgs. 156-179 and 185-201)

Designed for use in air control systems, this tubing rapidly self-extinguishes to control smoke generation and flame spread. It stays flexible and resists stress cracks, even at low temperatures. Use with air; not recommended for use with liquids. Material meets UL 94V2 and UL 1820. Not rated for sterilization or vacuum.

Tubing with stripes has four evenly spaced stripes for easy line identification.

To Order: Please specify length from the available lengths listed. For tubing with stripes, please also specify stripe color: blue, green, orange, red, violet, white, or yellow.

Flexible Low-Temperature White EVA Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 90)
- Temperature Range: –105° to +160° F
- Tensile Strength: 2100 psi
- Use compression fittings with tube supports (see page 169)

EVA (ethyl vinyl acetate) tubing, which is a blend of polyethylene and vinyl acetate, remains flexible at low temperatures and is resistant to impact, flex fatigue, and stress cracks. You can count on it to stand up to grease and UV rays. Use this semi-clear white tubing with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1350 compliant. It can be sterilized with gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

High-Purity White Polyethylene-Lined EVA Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 90)
- Temperature Range: Standard: –50° to +175° F; High Temperature: –60° to +200° F
- Tensile Strength: Standard: 1500 psi; High Temperature: 2500 psi
- Use barbed fittings (see pages 156-165)

With a polyethylene liner, this EVA (ethyl vinyl acetate) tubing will resist freezing and remain flexible and impact resistant when temperatures fluctuate. This semi-clear white tubing is high purity, which means it is made without a plasticizer that can impart odors and contaminate fluid passing through. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1520 and USDA compliant. It can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the EVA, polypropylene, and nylon tubing on this page, go to mcmaster.com and search for **5632KAC**.

High-Pressure White EVA Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 80)
- Temperature Range: –30° to +125° F
- Tensile Strength: 1800 psi
- Use barbed fittings (see pages 156-165)

Reinforced with a polyester-rayon braid for strength in pressure applications, this semi-clear white tubing will remain flexible, even at low temperatures. Due to the braid reinforcement, this tubing is sometimes referred to as hose. It has excellent resistance to flex fatigue as well as stress cracking. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1350 compliant. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Rigid White Polypropylene Tubing

- Rigid
- Wall Hardness: Hard (Rockwell R: 90)
- Temperature Range: 40° to 200° F
- Tensile Strength: 4930 psi
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

This semi-clear white polypropylene tubing is generally harder and stronger than polyethylene tubing. It is made without a plasticizer that can impart tastes and contaminate fluid passing through. Use with water, deionized water, air, and ethylene glycol. Material is FDA CFR21 177.1520 compliant. It can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

NSF/FDA-Compliant Black Polypropylene Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 66)
- Temperature Range: –40° to +180° F
- Tensile Strength: 4100 psi
- Use compression fittings (see pages 165-179)

While similar to the white polypropylene tubing above, this opaque black polypropylene tubing does have one obvious advantage—it meets NSF 51 for use with food and beverage. Also use with water and air. The material is FDA CFR21 177.1520 compliant. It is harder, stronger, and more resistant to stress cracking than polyethylene tubing. It can be sterilized with radiation. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Flexible Nylon Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 70)
- Temp. Range: –60° to +200° F, unless noted
- Use compression fittings (see pages 165-179)

This tubing provides flexibility along with chemical and impact resistance. Not rated for sterilization. Vacuum rating is 28″ Hg @ 72° F, unless noted.

General purpose tubing comes in opaque black and white, unless noted.

Choose-a-color tubing makes it easy to identify different lines within your system. Comes in opaque blue, green, red, and yellow.

To Order: Please specify length from the available lengths listed, as well as color where applicable.

High-Pressure White Nylon Tubing

- Flexible
- Wall Hardness: Hard (Rockwell R: 108)
- Temperature Range: –60° to +200° F
- Tensile Strength: 7685 psi
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

Harder walls on this tubing allow it to withstand twice as much pressure as the other nylon tubing on this page. Use with water, air, and ethylene glycol. Not rated for sterilization. Vacuum rating is 28″ Hg @ 75° F.

To Order: Please specify length from the available lengths listed.

ID	OD	Wall	Bend Radius	Max. psi @ 75° F	Available Lengths, ft.		Per Ft. ♦

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the nylon tubing on this page, go to mcmaster.com and search for **5112KAC**.

Extra-Flex Nylon Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 57)
- Temperature Range: –40° to +180° F
- Tensile Strength: 5655 psi
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

Softer walls make this nylon tubing more flexible. It is made without a plasticizer that can impart odors and contaminate fluid passing through. Use with water, air, and ethylene glycol; ***inch*** sizes can also be used with kerosene and mineral oil. Not rated for sterilization. Vacuum rating is 28″ Hg @ 73° F.

To Order: Please specify length from the available lengths listed, as well as color: opaque black or semi-clear white.

Nylon Vacuum Tubing

- Flexible
- Wall Hardness: Hard (Rockwell R: 112)
- Temperature Range: –40° to +225° F
- Tensile Strength: 11,000 psi
- Use compression fittings (see pages 165-179)

An exceptionally hard wall gives this tubing enough strength to handle vacuum pressure up to 29.9″ Hg @ 70° F. This abrasion resistant tubing is made without a plasticizer that can impart odors and contaminate fluid passing through. Use with water, air, food, and fuel. Material is FDA CFR21 177.1500 compliant. Tubing can be sterilized with gas.

To Order: Please specify length from the available lengths listed, as well as color: opaque black or semi-clear white.

Self-Retracting Nylon Tubing

- Flexible
- Wall Hardness: Hard (Rockwell R: 78)
- Temperature Range: –40° to +180° F
- Tensile Strength: 6960 psi
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

Keep your work area tidy with this coiled tubing that extends when you need it and retracts out of the way when you don't. It's made of tough, abrasion-resistant nylon. Use with water, air, ethylene glycol, kerosene, and mineral oil. Not rated for sterilization or bend radius. Vacuum rating is 28″ Hg @ 75° F.

Comes in semi-clear white and the following opaque colors: black, blue, green, orange, and red. **To Order:** Please specify color.

High-Strength Clear Nylon Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 80)
- Temperature Range: –40° to +212° F
- Tensile Strength: 10,875 psi
- Use compression fittings (see pages 165-179)

Made of tough, abrasion-resistant nylon, this high-strength tubing is clear, so you can easily monitor the flow of your line. This tubing is made without a plasticizer that can impart taste and contaminate fluid passing through. Use with water, air, food, and fuel. Material is FDA CFR21 177.1500 compliant. Tubing can be sterilized with gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the tubing on this page, go to mcmaster.com and search for **5097TAC**.

D.O.T. Choose-a-Color Nylon Tubing for Air

- Flexible
- Wall Hardness: Hard (Shore D: 63)
- Temperature Range: –40° to +200° F
- Tensile Strength: Not rated
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

This tubing meets the Department of Transportation (D.O.T. FMVSS 106) criteria for air brake tubing. The ***nonreinforced*** tubing also meets SAE J844 A standards; ***reinforced*** tubing also meets SAE J844 B standards. Both styles are for use with compressed air only and have a pressure rating of 150 psi @ 75° F. Not rated for sterilization or vacuum.

Comes in opaque black, blue, green, red, silver, and yellow, unless noted. **To Order:** Please specify color and length from the available lengths listed.

Durable Clear Polycarbonate Tubing

- Rigid
- Wall Hardness: Very hard (Rockwell R: 118)
- Temperature Range: 32° to 250° F
- Tensile Strength: 9000 psi
- Use adhesives to connect (see pages 3402-3403)

Made of rigid polycarbonate, this super-tough tubing stands up to high-pressure applications. It is UV resistant and it's clear, so you can easily monitor the flow of your line. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water, air, and food and beverage. Material is FDA compliant. Not rated for bend radius, sterilization, or vacuum.

To Order: Please specify 2-, 4-, or 8-ft. length.

ID	OD	Wall	Max. psi. @ 73° F		Each 2 ft.	Each 4 ft.	Each 8 ft.
1/4″	3/8″	1/16″	1250	9176T1	$2.48	$4.96	$8.26

Abrasion-Resistant White ETFE Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 63-72)
- Temperature Range: –60° to +300° F
- Tensile Strength: 5800-6700 psi
- Use compression fittings (see pgs. 165-179)

ETFE (ethylene tetrafluoroethylene), which is also known as Tefzel, is more abrasion resistant than PTFE, PFA, and FEP. This semi-clear white tubing has a smooth ID for restriction-free flow, has low permeability, and is a good electrical insulator. It's also impact resistant and inert to most chemicals. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water, deionized water, air, and ethylene glycol. Material meets ASTM D3159. It can be sterilized with steam (autoclaving), gas, and chemicals. Vacuum rating is 29.9″ Hg @ 72° F.

To Order: Please specify length from the available lengths listed.

Flame-Retardant Nylon Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 50)
- Temperature Range: 32° to 140° F
- Tensile Strength: 1560 psi
- Use push-to-connect fittings (see pgs. 185-201)

Ideal for spot welding applications, this tubing meets UL 94V0 for flammability. It will stay flexible longer than other types of nylon tubing. Use with water and air. Maximum pressure is 174 psi @ 68° F. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed and color: opaque black, blue, green, white, or red (unless noted).

■ Not offered in green or red.

Moisture-Resistant White Acetal Tubing

- Rigid
- Wall Hardness: Very hard (Rockwell R: 120)
- Temperature Range: –20° to +180° F
- Tensile Strength: 10,000 psi
- Use compression fittings (see pgs. 165-179)

Choose acetal tubing over nylon if you want comparable strength and flexibility with less moisture absorption. This opaque white tubing is hard and durable, plus it's made without a plasticizer that can contaminate fluid passing through. Use with water and deionized water. This tubing can be sterilized with steam (autoclaving). Not rated for bend radius or vacuum.

ID	OD	Wall	Max. psi @ 73° F		***5-ft. Lengths*** Each

Flexible White Tubing Made with Teflon® PTFE

- Very flexible
- Wall Hardness: Hard (Shore D: 50-65)
- Temperature Range: –454° to +500° F
- Tensile Strength: 2500-4000 psi
- Use worm drive clamps (see pgs. 274-275)

Also known as convoluted tubing, the spiral design makes this tubing more flexible than smooth-surface tubing. This tubing is made of semi-clear white Teflon® PTFE (polytetrafluoroethylene), so it is inert to most chemicals and is a good electrical insulator. It is made without a plasticizer that can contaminate fluid passing through. This tubing has a cuff on each end to allow for easy connections. Use with water, deionized water, air, food and beverage, and ethylene glycol. Material is FDA compliant, and meets UL 94V0 for flammability and Mil. Spec. AMS-T-81914/2. It can be sterilized with steam (autoclaving) and gas. Vacuum is not rated.

To Order: Please specify length in 1-ft. increments up to the maximum continuous length of 10 feet. Length includes both cuffs.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the Teflon® PTFE, PTFE, and FEP-lined polyethylene tubing on this page, go to mcmaster.com and search for **52315KAC**.

Extreme-Temperature Tubing Made with PTFE and Teflon® PTFE

- Flexible
- Wall Hardness: Hard (Shore D: 50-65)
- Temperature Range: –450° to +500° F
- Tensile Strength: 2500-4000 psi
- Use compression fittings (see pages 165-179)

Solid

With Stripe

Whether you choose Teflon® PTFE or PTFE (polytetrafluoroethylene), you'll find this tubing can withstand a broad temperature variation. It has a smooth surface for restriction-free flow, plus it won't react to most chemicals, has a low penetration of gases and liquids, and good insulating properties. Use with water, deionized water, air, food and beverage, and ethylene glycol. Can be sterilized with gas.

Teflon® PTFE— Material is FDA compliant and meets UL 94V0 for flammability. Not rated for vacuum. **To Order:** Please specify length from the available lengths listed.

PTFE Choose-a-Color— Material is FDA CFR21 177.1550 compliant. Vacuum rating is 29″ Hg @ 72° F. *Solid* tubing comes in opaque black, blue, green, red, and yellow. *Striped* tubing is semi-clear white and comes with your choice of stripe color: black, blue, green, red, and yellow. **To Order:** Please specify length from the available lengths listed and tube color or stripe color.

Metric PTFE— Material is FDA CFR21 177.1550 compliant. Vacuum rating is 29″ Hg @ 72° F. **To Order:** Please specify length from the available lengths listed.

Flexible White FEP-Lined Polyethylene Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 45)
- Temperature Range: –25° to +175° F
- Tensile Strength: 1450 psi
- Use barbed and compression fittings (see pages 156-179)

Get the toughness of FEP (fluorinated ethylene propylene) combined with the flexibility of LDPE (low-density) polyethylene. The FEP liner is inert to most chemicals, has a smooth surface, and is a good electrical insulator. Use this semi-clear white color tubing with water, air, food and beverage, and ethylene glycol. Liner material is FDA CFR21 177.1550 compliant. It can be sterilized with gas and chemicals. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the FEP tubing on this page, go to mcmaster.com and search for **52355KAC**.

Durable White Tubing Made with Teflon® FEP

- Flexible (unless noted)
- Wall Hardness: Hard (Shore D: 55)
- Temperature Range: Inch: –320° to +400° F
  Metric: –300° to +400° F
- Tensile Strength: Inch: 2600 psi
  Metric: 4300 psi
- Use compression fittings (see pgs. 165-179)

Made of semi-clear white Teflon® FEP (fluorinated ethylene propylene), this tubing is tougher than PTFE, PFA, and ETFE tubing. It has low porosity and permeability, plus it's UV resistant, abrasion resistant, and inert to most chemicals. It's also a good electrical insulator. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1550 compliant. Tubing can be sterilized with steam (autoclaving) and gas.

Inch sizes have a vacuum rating of 29″ Hg @ 73° F, except 52355K93, K21, and K22, which are not rated for vacuum. ***Metric*** sizes are not rated for vacuum.

To Order: Please specify length from the available lengths listed.

★ This tubing is rigid and is furnished in a straight length.

Self-Retracting White FEP Tubing

- Very flexible
- Wall Hardness: Hard (Shore D: 55)
- Temperature Range: –400° to +400° F
- Tensile Strength: 3500 psi
- Use compression and push-to-connect fittings (see pgs. 165-179 and 185-201)

This tubing extends when you need it and retracts out of the way when you don't to keep your work area neat. Made of semi-clear white FEP (fluorinated ethylene propylene), this tubing is more abrasion resistant than PTFE tubing. It has low porosity and permeability, plus it's UV resistant and inert to most chemicals. It is also a good electrical insulator. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water, air, and food and beverage. Material meets UL 94V0 for flammability and is FDA CFR21 177.1550 compliant. Tubing can be sterilized with steam (autoclaving), gas, and chemicals. Vacuum rating is 27″ Hg @ 72° F.

Choose-a-Color FEP Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 55)
- Temperature Range: Air: –4° to +392° F
  Water: 32° to 212° F
- Tensile Strength: 4350 psi
- Use barbed, compression, and push-to-connect fittings (see pgs. 156-179 and 185-201)

Color code your lines for easy identification with this FEP (fluorinated ethylene propylene) tubing. This tubing is tougher than PTFE, PFA, and ETFE tubing. It has low porosity and permeability, plus it's UV resistant, abrasion resistant, and inert to most chemicals. It is also a good electrical insulator. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water, air, and ethylene glycol. Material meets UL 94V0 for flammability. Tubing can be sterilized with steam (autoclaving) and chemicals. Maximum pressure is 145 psi @ 69° F. Not rated for vacuum.

This tubing comes in your choice of opaque black, semi-clear blue, and semi-clear red. **To Order:** Please specify length from the available lengths listed and color.

Flexible White Tubing Made with Teflon® FEP

- Very flexible
- Wall Hardness: Hard (Shore D: 56)
- Temperature Range: –112° to +200° F
- Tensile Strength: 2600 psi
- Use barbed and compression fittings (see pages 156-179)

The corrugated design acts like an accordion to give this FEP (fluorinated ethylene propylene) tubing a 2:1 extension/compression ratio as well as a tight bend radius. This semi-clear white tubing is tougher than PTFE, PFA, and ETFE tubing. It has low porosity and permeability, plus it's UV resistant, abrasion resistant, and inert to most chemicals. It's made without a plasticizer that can contaminate fluid passing through. Use with water, air, and food and beverage. Material is FDA CFR21 177.1550 compliant. Tubing can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length in 1-ft. increments up to the maximum continuous length of 12 feet. Length is the "relaxed length" and includes both cuffs.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the PFA and PVDF tubing on this page, go to mcmaster.com and search for **51805KAC**.

Crack-Resistant Tubing Made with Teflon® PFA

- Flexible (unless noted)
- Wall Hardness: Hard (Shore D: 60 for inch sizes; Shore D: 55 for metric sizes)
- Temperature Range: –320° to +500° F
- Tensile Strength: 2200 psi
- Use compression fittings (see pages 165-179)

Metric

More resistant to stress cracking than PTFE tubing, this PFA (perfluoroalkoxy) tubing is also less porous. It is a good electrical insulator, inert to most chemicals, and is abrasion resistant. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water, air, food and beverage, and ethylene glycol. Material is FDA CFR21 177.1550 compliant. Tubing can be sterilized with steam (autoclaving) and gas.

Inch sizes are semi-clear white and have a vacuum rating of 29.9″ Hg @ 72° F.

Metric sizes are clear and are not rated for vacuum.

To Order: Please specify length from the available lengths listed.

★ This tubing is rigid and furnished in a straight length.

Extreme-Purity Clear PFA Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 60)
- Temperature Range: –320° to +500° F
- Tensile Strength: 4000 psi
- Use compression fittings (see pages 165-179)

This PFA (perfluoroalkoxy) tubing is so pure, it is ideal for use in the semiconductor and pharmaceutical industries. This tubing is made without a plasticizer that can contaminate fluid passing through. It is inert to most chemicals and offers excellent resistance to UV exposure and temperature extremes. Use with water, air, and food and beverage. Material meets UL 94V0 for flammability and is FDA compliant. Tubing can be sterilized with steam (autoclaving) and gas. Not rated for bend radius or vacuum.

To Order: Please specify length from the available lengths listed.

Ultra-Clear PFA Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 59)
- Temperature Range: –320° to +450° F
- Tensile Strength: 2300 psi
- Use compression fittings (see pages 165-179)

Made of a specially formulated PFA material, this tubing is clearer and smoother than other PFA and FEP tubing. Its superior smoothness creates better flow and allows easier cleaning. This tubing is made without a plasticizer that can contaminate fluid passing through. Use with water and air. Tubing can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

3-A Sanitary White PVDF Tubing

- Flexible
- Wall Hardness: Hard (Shore D: 57-62)
- Temperature Range: –44° to +212° F
- Tensile Strength: 3500 psi
- Use compression fittings (see pages 165-179)

Use this tubing with dairy products, food, beverage, water, and air—it is resistant to fungi, abrasion, UV exposure, and most chemicals. It's made of off-white PVDF (polyvinylidene fluoride), which is also known as Kynar. It is NSF 51 certified and FDA CFR21 177.2600 and USDA compliant. This tubing is made without a plasticizer that can contaminate fluid passing through, plus it is more flexible than the other PVDF tubing we offer. Tubing can be sterilized with gas. Vacuum rating is 28″ Hg @ 72° F.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the tubing on this page, go to mcmaster.com and search for **52395KAC**.

High-Strength White PVDF Tubing

- Flexible
- Wall Hardness: Hard
  Inch: (Shore D: 75-80)
  Metric: (Shore D: 65-70)
- Temperature Range:
  –40° to +250° F
- Tensile Strength:
  Inch: 5000-7500 psi
  Metric: 3900-4900 psi
- Use compression fittings
  (see pages 165-179)

With greater mechanical strength than other PVDF (polyvinylidene fluoride) tubing, this semi-clear white tubing is more rigid. PVDF is also known as Kynar. This tubing is resistant to fungi, abrasion, UV exposure, and most chemicals. It is made without a plasticizer that can contaminate fluid passing through. Use with water, air, and food and beverage. ***Inch*** sizes meet UL 94V0 for flammability and are FDA CFR21 177.2510 compliant. ***Metric*** sizes are FDA compliant. All tubing can be sterilized with steam (autoclaving) and chemicals. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Light-Transmitting THV Fluoropolymer Tubing

- Flexible
- Wall Hardness: Firm (Shore D: 44)
- Temperature Range: –40° to +200° F
- Tensile Strength: 2900 psi
- Use compression fittings (see pgs. 165-179)

Ideal for UV purification systems, this semi-clear THV tubing can transmit UV light better than FEP, PTFE, or PFA tubing. It is also clearer and more flexible than FEP and PFA tubing. Use with water and air. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Super Hard PEEK Tubing

- Rigid
- Wall Hardness: Very hard (Rockwell R: 126)
- Temperature Range: –328° to +482° F
- Tensile Strength: 13,300 psi
- Use compression fittings (see pgs. 165-179)

This PEEK (polyetheretherketone) tubing is so hard, it is an excellent substitute for stainless steel tubing. It has superior impact resistance and is inert to most chemicals. Use with water, air, and food and beverage. Material is FDA compliant. Tubing can be sterilized with steam (autoclaving) and gas. Not rated for bend radius or vacuum. *Note*: Do not bend this tubing.

To Order: Please specify length from the available lengths listed.

High-Pressure Black Buna-N Rubber Tubing

- Very flexible
- Wall Hardness: Firm (Shore A: 75)
- Temperature Range: –40° to +220° F
- Tensile Strength: 1400 psi
- Use barbed fittings
  (see pages 156-165)

A durable nylon braided cover protects this opaque black Buna-N (nitrile) tubing and gives it strength to handle the highest pressure of any rubber tubing we offer. Due to the braided cover, this tubing is sometimes referred to as hose. Use with water, air, and hydraulic fluid. Not rated for sterilization or vacuum.

To Order: Please specify length from the available lengths listed.

Oil-Resistant Black Buna-N Rubber Tubing

- Very flexible
- Wall Hardness: Soft (Shore A: 60)
- Temperature Range: –20° to +212° F
- Tensile Strength: 1500 psi
- Use barbed and compression fittings (see pages 156-179)

Choose this opaque black Buna-N (nitrile) tubing when your application requires good resistance to oil and solvents. Also use with water, deionized water, air, and ethylene glycol. Material meets ASTM D2000 BG 615. It can be sterilized with steam (autoclaving). Not rated for bend radius or vacuum. Also not rated for pressure; use in gravity flow applications.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the rubber tubing on this page, go to mcmaster.com and search for **5543KAC**.

Super Soft Latex Rubber Tubing

- Very flexible
- Stretches up to 3 times its length
- Wall Hardness: Very soft (Shore A: 35)
- Temperature Range: 0° to 158° F
- Tensile Strength: 4000 psi
- Use barbed fittings (see pages 156-165)

Go ahead and stretch it, bend it, compress it—this tubing will spring back to its original shape. Made of super-soft natural rubber, this tubing is commonly called surgical tubing (not for use in medical applications). It has a smooth finish and is resistant to abrasion as well as weak acids and alkalies. Use with water, air, and ethylene glycol. Material meets Fed. Spec. A-A-52047C and MIL-T-36966/A-A-53848. Tubing can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

Tubing comes in your choice of colors: opaque black or semi-clear amber. **To Order:** Please specify length from the available lengths listed and color.

Abrasion-Resistant Tan Gum Rubber Tubing

- Very flexible
- Stretches up to 2 times its length
- Wall Hardness: Very soft (Shore A: 45)
- Temperature Range: –70° to +180° F
- Tensile Strength: 3000 psi
- Use barbed fittings (see pages 156-165)

While not as resilient or soft as latex rubber, this gum rubber tubing has thick walls and a rough-textured finish (unless noted) to provide excellent abrasion resistance. Use with water, air, and ethylene glycol. Material meets Fed Spec A-A-52047 Type 1, Class 1 and 2. This tubing can be sterilized with chemicals. Not rated for bend radius or pressure. Use in gravity-flow applications.

Vacuum-rated tubing withstands vacuum up to 30″ Hg @ 72° F.

To Order: Please specify length from the available lengths listed.

■ Smooth finish.

Large-Diameter FDA White Gum Rubber Tubing

- Very flexible
- Stretches up to 2 times its length
- Wall Hardness: Very soft (Shore A: 45)
- Temp. Range: –67° to +180° F
- Tensile Strength: 3396 psi
- Use clamps (see pages 274-283)

Ideal for use in clean environments such as food processing plants, this opaque white gum rubber tubing comes in a range of large diameters for easy connections. It has a rough-textured finish that provides excellent abrasion and tear resistance, however it is not as soft or resilient as latex rubber. Use this tubing with water, air, and food and beverage. Material is FDA CFR21 177.2600 compliant. It can be sterilized with steam (autoclaving). Not rated for bend radius or vacuum. Also not rated for pressure; use in gravity-flow applications.

To Order: Please specify length in 1-ft. increments up to 25 ft.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the rubber tubing on this page, go to mcmaster.com and search for **5102KAC**.

High-Temperature Viton® Fluoroelastomer Rubber Tubing

- Flexible
- Soft: Stretches up to 2 times its length
- Wall Hardness: Soft: (Shore A: 60); Firm: (Shore A: 75)
- Temperature Range: –15° to +400° F
- Tensile Strength: 1600 psi
- Use barbed fittings (see pages 156-165)

Harder than pure gum (natural) rubber, this synthetic rubber tubing is resistant to high temperatures, ozone, and UV exposure. Use with water and ethylene glycol. It can be sterilized with steam (autoclaving). Not rated for bend radius or vacuum. Also not rated for pressure; use in gravity-flow applications.

Soft tubing comes in opaque black. ***Firm*** tubing comes in your choice of opaque black, brown, and green. **To Order:** Please specify length from the available lengths listed; for firm tubing, also specify color.

Durable Black Neoprene Rubber Tubing

- Flexible
- Wall Hardness: Firm (Shore A: 82)
- Temperature Range: –20° to +212° F
- Tensile Strength: 1286 psi
- Use barbed and compression fittings (see pages 156-179)

This synthetic rubber tubing is harder and more abrasion resistant than natural rubber, yet slightly less resilient. Made of opaque black neoprene, you can use this tubing with water, air, ethylene glycol, and diluted acids. Material meets ASTM D2000 2BC, 810, A14, C12, and E034, as well as ASTM E162. It can be sterilized with steam (autoclaving). Not rated for bend radius or vacuum. Also not rated for pressure; use in gravity-flow applications.

To Order: Please specify length from the available lengths listed.

Weather-Resistant Black EPDM Rubber Tubing

- Flexible
- Stretches up to 2 times its length
- Wall Hardness: Soft (Shore A: 60)
- Temperature Range: –40° to +300° F
- Tensile Strength: 1700 psi
- Use barbed and push-to-connect fittings (see pgs. 156-165 and 185-201)

Made of pure EPDM with no SBR additives, this opaque black tubing has excellent resistance to UV sunlight, ozone, and whatever else Mother Nature throws at it. It has higher resistance to diluted and somewhat concentrated acids than silicone. Use with water and ethylene glycol. Material meets ASTM D2000 M4 CA611. Not rated for sterilization or vacuum. It is also not rated for pressure; use in gravity-flow applications.

To Order: Please specify length from the available lengths listed.

- Temperature Range: –94° to +392° F
- Tensile Strength: Firm: 1350 psi
  Soft and NSF 51 Soft: 1100 psi
- Use barbed fittings (see pages 156-165)

Able to handle higher temperatures than natural rubber, this synthetic rubber tubing will maintain its flexibility and resiliency over time, making it a good choice for peristaltic (squeeze-action) pump applications. It is peroxide cured and won't impart odors or taste to the fluid passing through. Use with water, air, and food and beverage. Material is FDA CFR21 177.2600 compliant. It can be sterilized with steam (autoclaving). Not rated for vacuum.

Firm tubing meets ASTM D2000 M7GE 707 and comes in your choice of opaque black, opaque red, semi-clear blue, or semi-clear white.

Soft tubing is the softest silicone tubing we offer. It meets ASTM D2000 M3GE 507 and comes in your choice of opaque black, opaque red, semi-clear blue, or semi-clear white.

NSF 51 soft tubing is furnished in individually bagged lengths to meet the NSF 51 food handling standard. It also meets ASTM D2000 M3GE 507. Color is semi-clear white.

To Order: Please specify length from the available lengths listed. For *firm* and *soft* tubing, please also specify color.

Crush-Resistant Silicone Rubber Tubing

- Very flexible
- Stretches up to 2 times its length
- Wall Hardness: Soft (Shore A: 65)
- Temperature Range: –65° to +450° F
- Tensile Strength: 1150 psi
- Use barbed fittings (see pages 156-165)

Thick walls combined with synthetic silicone rubber make this semi-clear white tubing crush resistant. It will stay flexible over a wide range of temperatures, plus it's resistant to weather and ozone, so it is ideal for outdoor use. This tubing is peroxide cured and won't impart odors or taste to the fluid passing through. Use with drinking (potable) water, air, food and beverage, and dairy. Material meets 3-A sanitary requirements, NSF 51 and 61, and ASTM D2000. It is also FDA CFR21 177.2600 and USDA compliant. It can be sterilized with steam (autoclaving). Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

High-Pressure Silicone Rubber Tubing

- Flexible
- Wall Hardness: Soft (Shore A: 60)
- Temperature Range: –65° to +350° F
- Tensile Strength: 1275 psi
- Use barbed fittings (see pages 156-165)

Reinforced with a polyester braid, this semi-clear white tubing can handle high pressure. Due to the braid reinforcement, this tubing is sometimes referred to as hose. It remains flexible at a wide range of temperatures and is resistant to UV exposure. This tubing is peroxide cured and won't impart odors or taste to the fluid passing through. Use with water and food and beverage. Material meets NSF 51 and is FDA CFR21 177.2600 compliant. It can be sterilized with steam (autoclaving). Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the rubber tubing on this page, go to mcmaster.com and search for **9628TAC**.

High-Purity White Silicone Rubber Tubing for Peristaltic Pumps

- Flexible
- Stretches up to 5 times its length
- Wall Hardness: Soft (Shore A: 50)
- Temperature Range: –70° to +450° F
- Tensile Strength: 1250 psi
- Use barbed fittings (see pages 156-165)

Specially sized for peristaltic (squeeze-action) pumps, this semi-clear white tubing is cured with platinum, a higher purity process than the peroxide curing used on other silicone tubing. It is also made without any plasticizers that can contaminate fluid passing through. Use with dairy, food, and beverage. Material meets 3-A sanitary requirements and is FDA CFR21 177.2600 and USDA compliant. It can be sterilized with steam (autoclaving) or gas. Not rated for bend radius, vacuum, or pressure.

To Order: Please specify length from the available lengths listed.

High-Purity White Silicone Rubber Tubing

Braid Reinforced

Nonreinforced
- Very flexible
- Stretches up to 3 times its length
- Wall Hardness: Soft (Shore A: 50)
- Temp. Range: –80° to +425° F
- Tensile Strength: 1350 psi
- Use barbed fittings (see pgs. 156-165)

Braid Reinforced
- Flexible
- Wall Hardness: Soft (Shore A: 60)
- Temp. Range: –80° to +350° F
- Tensile Strength: Not rated
- Use barbed fittings (see pgs. 156-165)

This semi-clear white tubing is cured with platinum, a higher-purity process than the peroxide curing used on other silicone tubing. It is also made without any plasticizers that can contaminate fluid passing through. Use with water, air, and food and beverage. It can be sterilized with steam (autoclaving).

Nonreinforced tubing is FDA CFR21 177.2600 compliant. Not rated for bend radius or vacuum.

Braid-reinforced tubing is FDA and USDA compliant. The braid is made of polyester for added strength. Due to the braid reinforcement, this tubing is sometimes called hose. Not rated for vacuum.

To Order: Please specify length from the available lengths listed.

Nonreinforced

Durable Santoprene Blended Rubber/Plastic Tubing

General Purpose

- Very flexible
- Stretches up to 2 times its length
- Wall Hardness:
  General Purpose: Soft (Shore A: 64)
  Food and Beverage: Firm (Shore A: 73)
- Temperature Range: –76° to +275° F
- Tensile Strength: 1000 psi
- Use compression fittings (see pgs. 165-179)

Made of Santoprene, which is also known as thermoplastic elastomer, this tubing combines the best characteristics of EPDM rubber and polypropylene plastic to provide a highly durable material that's fatigue resistant. This tubing is ideal for use in peristaltic (squeeze-action) pumps. It can be sterilized with steam (autoclaving) and gas. Not rated for vacuum.

General purpose tubing is resistant to ozone and UV exposure. Use with water, air, and ethylene glycol. Color is opaque black.

Food and beverage tubing is resistant to ozone. Use with water, air, and food and beverage. Material meets UL 94HB for flammability and is FDA CFR21 177.1210 compliant. Color is opaque light brown.

To Order: Please specify length from the available lengths listed.

♦ Prices are 15-25% lower when you order the maximum continuous length (last available length listed).

For information about tubing, see page 118.

For information about the chemical compatibility of the blended rubber/plastic tubing on this page, go to mcmaster.com and search for **51075KAC**.

Durable Norprene Blended Rubber/Plastic Tubing

- Formulation:
  General Purpose: A-60-G
  Food and Beverage: A-60-F
- Flexible
- Stretches up to 2 times its length
- Wall Hardness: Soft (Shore A: 61)
- Temperature Range: –75° to +275° F
- Tensile Strength: 1000 psi
- Use barbed fittings (see pgs. 156-165)

General Purpose

This Norprene tubing is a blend of EPDM rubber and polypropylene plastic to provide a highly durable material that's resistant to fatigue, ozone, and UV exposure. Also known as thermoplastic elastomer, this tubing can withstand vacuum up to 29.9″ Hg @ 73° F, unless noted. This tubing is ideal for use in peristaltic (squeeze-action) pumps. It can be sterilized with steam (autoclaving) and chemicals.

General purpose tubing is opaque black. Use with water, air, and ethylene glycol.

Food and beverage tubing is opaque beige. Use with water, dairy, and food and beverage. Material meets 3-A sanitary requirements and NSF 51, plus it is FDA CFR21 177.2600 compliant.

To Order: Please specify length from the available lengths listed.

High-Performance Blended Rubber/Plastic Tubing

- Flexible
- Stretches up to 2 times its length
- Wall Hardness: Soft (Shore A: 64)
- Temp. Range: –60° to +275° F
- Tensile Strength: 1000 psi
- Use barbed fittings (see pgs. 156-165)

Made from a special blend of rubber and plastic, this highly durable tubing will last longer than silicone and other blended materials. Also known as PharMed BPT, this opaque tan material is soft and flexible, so it is ideal for use in peristaltic (squeeze-action) pumps. Use with water, air, food and beverage, and ethylene glycol. Material meets NSF 51 and is FDA CFR21 177.2600 compliant. It can be sterilized with steam (autoclaving), gas, and radiation.

Vacuum-rated tubing will withstand vacuum pressure up to 29.9″ Hg @ 73° F.

To Order: Please specify length from the available lengths listed.

Tubing Reels

Simply pull out as much tubing as you need—a gentle tug activates the spring rewind mechanism to neatly store the tubing for safety. Reels are made of 12-ga. steel with a blue powder-coated finish. Both the inlet and the outlet are a brass female swivel with 1/4″ NPT connection and a Buna-N (nitrile) seal. Includes four 13/32″ mounting holes (mounting bolts not included).

Reels with Braid-Reinforced PVC Tubing—Tubing is clear with a polyester braid reinforcement for extra strength. Due to the braid reinforcement, this tubing is sometimes referred to as hose. Temperature range is –40° to +165° F. Use with water and air. Not rated for vacuum.

Reels with Braid-Reinforced Polyurethane Tubing—This abrasion-resistant tubing is made of clear ether-based polyurethane with a polyester braid reinforcement for extra strength. Due to the braid reinforcement, this tubing is sometimes referred to as hose. Temperature range is –40° to +165° F. Use with water and air. Not rated for vacuum.

About Metal Tubing

Temperature/Pressure— As the temperature rises, the amount of pressure the tubing can withstand decreases.

Hardness— Compared to plastic and rubber tubing, the range of hardness for metal tubing is relatively small. For example, copper tubing is considered a soft metal while stainless steel is considered a hard metal; this is because copper bends more easily than stainless steel. Some of our tubing will have a hardness indicator, which is measured on the *Rockwell B* scale—for products that do not have this indicator, temper is a good indicator of relative hardness.

Temper— Also known as stress relieving. It is the heat treating or cold working of a metal to achieve the tensile strength and increase toughness.

Tensile Strength— The breaking strength of a material when stretched.

Fittings— The "Use with Fittings Style(s)" below represents all the fittings that can be used with a material. Please see the individual tubing presentation for fitting recommendations. Some tubing can be flared for use with flared fittings; for flaring tools see page 2336. *Note*: Use fittings that are made of the same material as the tubing to avoid electrolytic corrosion, which is generated between dissimilar metals.

Construction

Welded— Also known as "as welded." In this process, tubing is formed by rolling and welding sheet metal; there is a visible seam on the OD and a weld bead on the ID. Use this style when flow restriction is not an issue.

Welded and Drawn— Just like welded tubing, sheet metal is rolled and welded; however there is an additional process that smooths the ID and OD. This added step produces the smoothness and appearance of seamless tubing at a lower cost.

Seamless— A cylinder of material is pierced, creating a uniform tube without a weld or seam. Because it has no weld bead, this process ensures restriction-free flow.

Note: It is your responsibility to determine the suitability of the tubing for your application.

Material	Features	Use with Fitting Style(s)	Page(s)
Type 304 and Type 316 Stainless Steel	*Type 304* has good corrosion resistance. *Type 316* contains molybdenum for excellent resistance to corrosion and pitting. Within these materials, an "L" indicates low carbon content (less than 0.035%), which makes it easier to work with when welding.	Butt weld, quick clamp, compression, and flared; also connect by welding	144-150
Type 321 Stainless Steel	Similar to Type 304 stainless steel, but has the addition of titanium for enhanced corrosion resistance.	Butt weld, compression, and flared	150
Titanium	Strong yet lightweight with excellent corrosion resistance.	Connect by welding	150
Nickel-Copper	Also known as Alloy 400 Monel, it resists corrosion at high temperatures.	Connect by welding	150
Nickel-Chromium	Also called Alloy 600 Inconel. It has the highest temperature rating of any non-stainless steel tubing we offer.	Connect by welding	151
Carbon Steel	Also known as 1010 carbon steel, this is the most popular tubing produced.	Compression, flared, and vacuum	151-152
Aluminum	Lightweight with good corrosion resistance.	Flared; also connect by welding	152-153
Copper—Alloy 122	A soft metal with excellent corrosion resistance.	Wrot-copper solder-end, compression, and flared	153-155
Brass—Alloy 260	Similar to copper but contains 30% zinc, so it has a harder temper and handles higher pressures than copper.	Connect by soft soldering	155

Stainless Steel Tubing

High-Polish Sanitary Stainless Steel Tubing

- Temperature Range: –425° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use quick-clamp and butt-weld fittings (see pages 208-211)

Manufactured to 3-A sanitary requirements, this tubing is polished inside and out to a high-luster finish. The ID is polished to a 30 Ra finish; the OD is polished to a 20 Ra finish, except the 1/2″ and 3/4″ sizes which have a 30 Ra finish. This tubing has welded construction, so there's no weld bead on the ID. It has a Rockwell hardness of B90. Use with dairy, food and beverage, and anywhere surface contamination is a concern. Tubing can be sterilized with steam (autoclaving) and gas.

Type 304L stainless steel has good corrosion resistance. ***Type 316L stainless steel*** has excellent corrosion resistance. All tubing is furnished in a sealed cardboard tube.

To Order: Please specify 1-, 3-, or 6-ft. length.

Ultra-High-Polish Type 316/316L Stainless Steel Tubing

- Temperature Range: –425° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Moderate tensile (stretching) strength
- Use quick-clamp fittings (see pages 208-210)

Not only does this Type 316/316L stainless steel tubing meet 3-A sanitary requirements, it also meets ASME BPE2005 (bioprocessing equipment standards) for pharmaceutical, biotechnology, and other high-purity applications. Use with water, deionized water, air, dairy, and hydraulic oil.

The *1/2″ OD* tubing has seamless construction and the *3/4″ OD* tubing is welded. The OD is polished to a 30 Ra finish. The *1″-2″ OD* tubing has welded construction; the ID is polished to a 20 Ra finish and the OD is polished to a 30 Ra finish. All tubing has a Rockwell hardness of B90 and a wall thickness of 0.065″. Meets ASTM A269 and A270. Tubing can be sterilized with steam (autoclaving), gas, and chemicals. Each tube is capped, put in a plastic sleeve, then sealed in a cardboard tube.

To Order: Please specify 1-, 3-, or 6-ft. length.

For information about metal tubing, see page 144.

Stainless Steel Welded Tubing

- Temperature Range:
  Type 304: –423° to +1500° F
  Type 316: –325° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: No
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use stainless steel compression fittings and butt-weld fittings (see pages 172-175 and 211)

Also known as "as welded" tubing, this tubing has a weld bead on the ID—choose it as an economical alternative in applications that don't require the smooth interior of seamless or welded and drawn tubing. This tubing has a Rockwell hardness of B90. Use with water, deionized water, air, natural gas, oil, and hydraulic oil. Meets ASTM A269. Tubing can be sterilized with chemicals.

Type 304 stainless steel has good corrosion resistance.

Type 316 stainless steel has excellent corrosion resistance.

To Order: For straight lengths, please specify 1-, 3-, or 6-ft. length where prices are shown.

For information about metal tubing, see page 144.

Smooth-Bore Stainless Steel Seamless Tubing

- Temp. Range: Type 304: –425° to +1500° F
  Type 316: –325° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression, flared, and butt-weld fittings (see pgs. 165-184 and 211)

The seamless inner surface prevents particulate buildup for restriction-free flow. This tubing has a Rockwell hardness of B90. Use with water, air, natural gas, oil, and in boiler applications. Meets ASME SA213 as well as ASTM A213 and A269. Tubing can be sterilized with chemicals.

Type 304 stainless steel has good corrosion resistance. ***Type 316 stainless steel*** has excellent corrosion resistance.

To Order: For straight lengths, please specify 1-, 3-, or 6-ft. length.

Extra-Hard Type 304 Stainless Steel Seamless Tubing

- Temperature Range: –325° to +800° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- 1/8 Hard Temper: Moderate tensile (stretching) strength
- Use flared fittings (see pages 180-181)

Unlike other stainless steel tubing, this tubing (which is also known as 1/8 hard) has an extra-hard surface. It's just as corrosion resistant as annealed Type 304 stainless steel, but has higher tensile strength and is stronger and more durable. This tubing has seamless construction. It's commonly used on hydraulic fluid systems, but is also for use with water, deionized water, air, natural gas, and oil. Meets AMS-T-6845. It can be sterilized with steam (autoclaving) and gas. *Note*: Not suitable for welding or brazing.

To Order: Please specify 1-, 3-, or 6-ft. length.

OD	ID	Wall	OD Toler.	Max. psi @ 72° F		Each 1 ft.	Each 3 ft.	Each 6 ft.

Cleaned and Capped Type 316 Stainless Steel Seamless Tubing

- Temperature Range: –325° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression, flared, and butt-weld fittings (see pgs. 172-175, 180-181, and 211)

This tubing comes to you cleaned and capped to prevent moisture and dirt from contaminating the inside. It has seamless construction and is made of Type 316 stainless steel for excellent corrosion resistance. Use with water, air, natural gas, oil, and in boiler applications. Meets ASTM A213 and A269. Tubing can be sterilized with steam (autoclaving) and chemicals.

To Order: Please specify 1-, 3-, or 6-ft. length.

OD	ID	Wall	OD Toler.	Max. psi @ 72° F		Each 1 ft.	Each 3 ft.	Each 6 ft.
1/4"	0.18"	0.035"	±.005"	4375	9797T12	$12.54	$20.79	$33.00

Type 316/316L Stainless Steel Tubing with PVC Coating

- Temperature Range: –35° to +221° F
- Bendable: Yes, by hand
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression and flared fittings (see pages 172-175 and 180-181)

The outside of this Type 316/316L stainless steel tubing is covered with PVC to provide extra protection from corrosion. Type 316/316L stainless steel has excellent corrosion resistance. This tubing has welded construction, so there's a weld bead on the ID. It has a Rockwell hardness of B80. Use with water, air, natural gas, and mineral oil. Meets UL 94V2 for flammability. Not rated for sterilization.

To Order: Please specify 10- or 50-ft. coil.

OD	ID	Wall	OD Toler.	Max. psi @ 72° F		Each 10 ft.	Each 50 ft.
1/4"	0.18"	0.035"	±.008"	5025	3331K11	$44.53	$222.64

1/2"	0.43"	0.035"	±.008"	2350	3331K13	110.31	551.55

Extreme-Pressure Type 316L Stainless Steel Seamless Tubing

- Temperature Range: –425° to +1200° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- 1/8 Hard Temper: Moderate tensile (stretching) strength
- Use with 5892K fittings (see page 172)

Got a lot of pressure in your job? Then this tubing may be what you need—it handles more pressure than any other tubing we offer. This tubing has seamless construction and is made of Type 316L stainless steel for excellent corrosion resistance. Use with water, air, natural gas, oil, and hydraulic fluid. It can be sterilized with steam (autoclaving), gas, and chemicals.

To Order: Please specify 1-, 3-, or 6-ft. length.

OD	ID	Wall	OD Toler.	Max. psi @ 72° F		Each 1 ft.	Each 3 ft.	Each 6 ft.
1/4"	1/8"	0.062"	±.003"	15,000	9926T12	$39.66	$91.51	$152.52

Metric Type 316 Stainless Steel Welded and Drawn Tubing

- Temperature Range: –425° to +600° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Hard Temper: High tensile (stretching) strength
- Connect by welding

This metric tubing has welded and drawn construction, so there is no weld bead on the ID. It's made of Type 316 stainless steel, which has excellent corrosion resistance. Use with water, air, natural gas, and oil. Meets ASTM A908 and Fed. Spec. GG-N-196. It can be sterilized with steam (autoclaving) and chemicals.

To Order: Please specify 0.5-, 1-, or 2-m length.

For information about metal tubing, see page 144.

Metric Type 316 Stainless Steel Seamless Tubing for Instrumentation Fittings

- Temperature Range: –325° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use Yor-Lok compression fittings (see page 176)

Designed for use with Yor-Lok, Swagelok®, and Parker A-Lok metric fittings, this tubing meets ASTM A269. It's made of Type 316 stainless steel, which has excellent corrosion resistance. This tubing has seamless construction. Use with water, deionized water, air, natural gas, oil, and hydraulic fluid. It can be sterilized with steam (autoclaving), gas, and chemicals.

To Order: Please specify 0.5-, 1-, or 2-m length.

OD, mm	ID, mm	Wall, mm	OD Toler. mm	Max. psi @ 72° F		Each 0.5 m	1 m	2 m
6	4	1	±.13	5100	9811T12	$28.57	$47.35	$81.64

10	6	2	±.13	6300	9811T14	65.19	108.02	186.25
12	8	2	±.13	5200	9811T15	72.10	119.48	206.00

Precision Type 304 Stainless Steel Welded and Drawn Tubing

- Temperature Range: –425° to +600° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Straight: Hard Temper: High tensile (stretching) strength
  Coils: Soft Temper: Low tensile (stretching) strength
- Connect by welding

Unlike our welded stainless steel tubing that has a raised weld bead, this welded and drawn tubing is manufactured to tighter tolerances with no weld bead on the ID or OD. Use with water, air, natural gas, oil, and hydraulic fluid. Meets ASTM A908 and Fed. Spec. GG-N-196.

Straight lengths can be sterilized with steam (autoclaving) and radiation. OD tolerance is +.004″/–.002″. **To Order:** Please specify 12″ or 28″ length where prices are shown.

Coils can be sterilized with steam (autoclaving), gas, and chemicals. OD tolerance is ±.002″.

High-Pressure Stainless Steel Tubing

Type 304

- Temperature Range: –425° to +600° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Hard Temper: High tensile (stretching) strength
- Connect by welding

Type 316

- Temperature Range: –148° to +750° F
- Bendable: Yes, with bending tool
- Flareable: No
- Soft (annealed) Temper: Low tensile (stretching) strength
- Use compression fittings (see pages 174-175)

Also known as capillary tubing, this thin tubing comes in a wide range of wall thicknesses for high-pressure applications. This tubing can be sterilized with steam (autoclaving).

Type 304 stainless steel has good corrosion resistance and good machinability. It has welded and drawn construction, so there's no weld bead on the ID. Use with water, air, natural gas, and oil. Meets Fed. Spec. GG-N-196, as well as ASTM A269 and A908. OD tolerance is +.004″/–.002″.

Type 316 stainless steel has excellent corrosion resistance. This tubing has seamless construction and a Rockwell hardness of B95. It's a good choice for liquid chromatography applications. Also use with air, natural gas, oil, and hydraulic fluid. Meets ASTM A213 and A269. OD tolerance is +.002″/–.000″.

For information about metal tubing, see page 144.

Precision Miniature Stainless Steel Welded and Drawn Tubing

- Temperature Range: –425° to +600° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Hard Temper: High tensile (stretching) strength
- Connect by welding

Also known as hypodermic tubing, this small-diameter tubing is made to tight tolerances, so it's great for miniature applications such as needles or instruments. It has welded and drawn construction, so there is no weld bead on the ID. It also offers excellent machinability. Use with water, air, natural gas, and oil. Meets ASTM A908 and A269, as well as Fed. Spec. GG-N-196. Tubing can be sterilized with steam (autoclaving).

Type 304 stainless steel has good corrosion resistance. ***Type 316 stainless steel*** has excellent corrosion resistance.

To Order: Please specify 1- or 3-ft. length.

For information about metal tubing, see page 144.

Metric Type 316 Stainless Steel Seamless Tubing

- Temperature Range: –325° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Connect by welding

Sized for metric applications, this Type 316 stainless steel tubing has seamless construction. Use with water, air, natural gas, and oil in pressure vessels. It can be sterilized with chemicals.

To Order: Please specify 0.5-, 1-, or 2-m length.

OD, mm	ID, mm	Wall, mm	OD Toler., mm	Max. psi @ 72° F		Each 0.5 m	Each 1 m	Each 2 m
6	4	1.0	±.1	4,713	50365K31	$18.88	$34.71	$60.89
8	6	1.0	±.1	3,545	50365K32	22.97	42.24	74.11
10	7	1.5	±.1	4,621	50365K33	31.77	58.42	102.49

16	12	2.0	±.1	4,065	50365K35	52.02	95.65	167.80
20	16	2.0	±.1	3,258	50365K36	49.57	91.15	159.91

Super-Smooth Coated Stainless Steel Tubing

- Temperature Range: –425° to +842° F
- Bendable: Yes, with bending tool
- Flareable: No
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression fittings (see pages 172-175)

A thin layer of silicon permanently bonded to the ID of this tubing provides an extremely smooth surface that prevents deposits from forming, resulting in excellent corrosion resistance. Use with water, air, oil, sulfides, alcohols, and chlorinated compounds. Meets ASTM A269. Not rated for sterilization.

Type 304 stainless steel has good corrosion resistance. It has welded and drawn construction, so there's no weld bead on the ID.

Type 316 stainless steel has excellent corrosion resistance. This tubing has seamless construction.

To Order: Please specify 1-, 3-, or 6-ft. length.

OD	ID	Wall	OD Toler.	Max. psi @ 72° F		Each 1 ft.	Each 3 ft.	Each 6 ft.
Type 304

High-Strength Type 321 Stainless Steel Tubing

- Temperature Range: –425° to +1500° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use flared, compression, and butt-weld fittings (see pages 172-175, 180-181, and 211)

Some people think it's the titanium additive while others credit the seamless construction—all we know is that these two factors combined give this Type 321 stainless steel tubing very good strength and superior corrosion resistance. Use with water, air, natural gas, and oil. Meets MIL-T-8808B. Tubing can be sterilized with chemicals.

To Order: Please specify 1-, 3-, or 6-ft. length.

High-Strength and Lightweight Titanium Tubing

- Temperature Range: –20° to +600° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Connect by welding

Made of Grade 2 titanium, this tubing has a high strength-to-weight ratio and excellent corrosion resistance. It has a Rockwell hardness of B85. Use with water, salt water, air, oil, and chlorides. Meets ASTM B338 and ASME SB338. Not rated for sterilization.

Seamless tubing is made without a seam or a weld for a smooth, restriction free surface.

Welded tubing has a visible seam on the OD and a weld bead on the ID.

To Order: Please specify 1-, 3-, or 5-ft. length.

Acid-Resistant Nickel-Copper Tubing

- Temperature Range: –325° to +900° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Connect by welding

Also known as Alloy 400 Monel, this tubing is composed of 63% nickel and 28-34% copper, which makes it corrosion resistant, even at high temperatures. This tubing has seamless construction. Use with salt water, hydrofluoric acid, sulfuric acid, and alkalies. Meets ASTM B163. Not rated for sterilization.

To Order: Please specify 1-, 3-, or 6-ft. length.

For information about metal tubing, see page 144.

High-Temperature/Chemical-Resistant Nickel-Chromium Tubing

- Temperature Range: –325° to +1200° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Connect by welding

Also known as Alloy 600 Inconel, this tubing is composed of 72% nickel, 14-17% chromium, and 6-10% iron, so not only is it strong, it's also resistant to corrosion and stress cracking. Plus, it has the highest temperature rating of any non-stainless steel tubing we offer. This tubing has a Rockwell hardness of B92. It has seamless construction. Use with water, air, natural gas, oil, sodium sulfide, and abietic acid. Meets ASTM B163. This tubing can be sterilized with chemicals.

To Order: Please specify 1-, 3-, or 6-ft. length.

Carbon Steel Seamless Tubing

- Temperature Range: –65° to +800° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression and flared fittings (see pgs. 173, 178-179, and 182)

You may know this tubing as 1010 carbon steel, but did you also know that it's the most popular steel tubing produced? This tubing has seamless construction. Use with natural gas and hydraulic fluid. Meets ASTM A179 and SAE J524. Not rated for sterilization.

To Order: Please specify 3- or 6-ft. length.

Corrosion-Resistant Carbon Steel Seamless Tubing

- Temperature Range: –65° to +800° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression and flared fittings (see pgs. 173, 178-179, and 182)

Coated with a thin layer of yellow zinc dichromate for corrosion resistance, this carbon steel tubing is an economical alternative to stainless steel. It has seamless construction. Use with water, salt water, oil, hydraulic fluid, and for any application where steel is needed and extra corrosion resistance is required. Meets ASTM A179, A450, and A633 as well as SAE J524. Not rated for sterilization.

To Order: Please specify 1-, 3-, or 6-ft. length.

Metric Carbon Steel Seamless Tubing

- Temperature Range: –5° to +572° F (unless noted)
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression fittings (see page 172)

Sized for metric applications, this carbon steel tubing is seamless and cold drawn, so there's no weld bead on the ID. It has a Rockwell hardness of B75, unless noted. Use with air, oil, and hydraulic fluids. Meets DIN 2391. Not rated for sterilization.

To Order: Please specify 1- or 2-m length.

OD, mm	ID, mm	Wall, mm	OD Toler., mm	Max. psi @ 68° F		Each 1 m	Each 2 m
4	2	1	±.10	8,033	50295K56■	$11.93	$15.89

25	21	2	±.08	2,885	50295K431	24.45	32.60

■ Temperature range is –40° to +482° F; Rockwell hardness is B72.

High-Pressure Carbon Steel Welded and Drawn Tubing

- Temperature Range: –65° to +800° F
- Bendable: Yes, with bending tool
- Flareable: No
- Soft (Annealed) Temper: Moderate tensile (stretching) strength
- Connect by welding

Also known as DOM (drawn over mandrel) tubing, this tubing has welded and drawn construction, so there's no weld bead on the ID. It has a higher pressure rating than seamless tubing, and also has very good machinability and tolerances. Use with natural gas and hydraulic fluid. Meets ASTM A513 Type 5. Not rated for sterilization.

To Order: Please specify 3- or 6-ft. length where prices are shown.

For information about metal tubing, see page 144.

High-Strength/Corrosion-Resistant Carbon Steel Tubing

- Temp. Range: –40° to +250° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use compression and flared fittings (see pgs. 173 and 182)

Also known as Bundyweld tubing, this tubing is neither welded nor seamless. A single sheet of copper-plated carbon steel is rolled into a tube, then the copper is melted to form a strong cohesive bond. For exceptional corrosion resistance, 5176K22 and K23 are coated with an aluminum-based paint, while 5176K24 and K25 are zinc plated. Use with hydraulic fluid, fuel, and in refrigerator lines. Meets SAE J527. Not rated for sterilization. Coil length is 25 ft.

OD	ID	Wall	OD Toler.	Max. psi @ 72° F		Each

Steel Welded Vacuum Tubing

- Temperature Range: Up to 150° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Hard Temper: High tensile (stretching) strength
- Use vacuum fittings (see page 215)

Rated for both pressure and vacuum, this "as welded" tubing has a weld bead on the ID. Ideal for use in conveying systems for the transfer of granular products such as pellets and powder. Meets ASTM A513. Not rated for sterilization.

Carbon steel tubing has a Rockwell hardness of B55-70.

Galvanized steel offers better resistance to corrosion.

Aluminum Tubing

- Temperature Range: –452° to +400° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Hard T6 Temper: High tensile (stretching) strength
- Use flared fittings (see page 183)

This lightweight tubing is the most versatile aluminum tubing we offer—it is corrosion resistant, handles high pressure, and offers good weldability. Also known as Alloy 6061, it has magnesium and silicon added for strength. This tubing has seamless construction. Use with water, air, hydraulic fluid, and fuel. Meets ASTM B210 and SAE AMS-WW-T-700/6. Tubing can be sterilized with steam (autoclaving).

Military spec tubing meets MIL-T-7081.

To Order: Please specify 3- or 6-ft. length.

For information about metal tubing, see page 144.

Rigid Aluminum Tubing

- Temperature Range: –112° to +300° F
- Bendable: No
- Flareable: No
- ½ Hard H14 Temper: Moderate tensile (stretching) strength
- Connect by welding

Also known as Alloy 3003-H14, this lightweight tubing contains manganese for strength. It is corrosion resistant and can be welded. This tubing has seamless construction. Use with water, air, oil, and hydraulic fluid. Meets ASTM B210 and Fed. Spec. WW-T-700/2. Tubing can be sterilized with steam (autoclaving).

To Order: Please specify 1-, 3-, or 6-ft. length.

Easy-Bend Aluminum Tubing

- Temperature Range: –40° to +180° F
- Bendable: Yes, by hand
- Flareable: Yes
- Soft (Annealed) Type O Temper: Low tensile (stretching) strength
- Use flared fittings (see page 183)

Also known as Alloy 3003-O, this tubing is softer and more bendable than our other aluminum tubing. It has seamless construction. All have an OD tolerance of ±.003", except the 5/8" OD tubing which is ±.004". Use with water, air, alcohol, and oil. Meets ASTM B483-03, B483-75, and B483-95. Not rated for sterilization.

Ultra-Corrosion-Resistant Aluminum Tubing

- Temperature Range: –452° to +400° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use flared fittings (see page 183)

This tubing is also known as Alloy 5052-O temper. It has a higher magnesium content than 6061 aluminum for higher strength and is excellent for marine applications because it stands up to salt water and corrosion. Also for use with hydraulic fluid. This tubing has seamless construction. Not rated for sterilization.

To Order: Please specify 1-, 3-, or 6-ft. length.

Copper Tubing

- Temperature Range: –425° to +400° F
- Bendable: Straight: Yes, with bending tool
  Coils: Yes, by hand
- Flareable: Yes
- Straight: Hard Temper: Moderate tensile (stretching) strength
- Coils: Soft Temper: Low tensile (stretching) strength
- Use brass compression and copper solder-joint fittings (see pages 168-171 and 216-217)

Also known as Alloy 122, this alloy has the best ability to conduct heat of any standard heat exchange material. Tubing has seamless construction. For ***straight lengths***, the OD tolerance is ±.002" for OD sizes 1/8" to 1/2"; ±.003" for 5/8" to 1 3/4" OD sizes; ±.004" for 2" and 2 1/2" OD sizes; ***coils*** are soft and cannot hold these tolerances. Use with water, air, oil, and hydraulic fluid. Meets ASTM B75. Tubing can be sterilized with steam (autoclaving).

To Order: For straight lengths, please specify 1-, 3-, or 6-ft. length. For coils, please specify 10- or 50-ft. length.

For information about metal tubing, see page 144.

Cleaned and Capped Copper Tubing

- Temp. Range: 32° to 400° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use brass compression and copper solder-joint fittings (see pgs. 168-171 and 216-218)

This tubing is known by many names, such as copper pipe, Alloy 122, and refrigeration and air conditioning tubing. It has seamless construction and is furnished cleaned and capped to prevent moisture and dirt from contaminating the inside. The OD tolerance is ±.002″ for OD sizes up to 5/8″; ±.003″ for 3/4″ and 7/8″ OD sizes; ±.004″ for 1 1/8″ and 1 3/8″ OD sizes, and ±.005″ for 1 5/8″ OD size. Use with water, natural gas, and oil, as well as in refrigeration and air conditioning applications. Meets ASTM B280. Not rated for sterilization.

- Bendable: Straight: No Coils: Yes, with bending tool
- Flareable: Straight: No Coils: Yes
- Straight: Hard Temper: High tensile (stretching) strength Coils: Soft (Annealed) Temper: Low tensile (stretching) strength
- Use copper solder-joint fittings (see pages 216-218)

Also known as copper pipe and Alloy 122, this copper tubing meets NSF 61 for use with drinking (potable) water. It also meets ASTM B88. It has seamless construction. Not rated for sterilization.

High-pressure (Type K) tubing has thick walls. ***Medium-pressure (Type L)*** tubing has thinner walls than the high-pressure tubing. ***Low-pressure (Type M)*** tubing has extra-thin walls.

★ Tube size is the accepted designation of the wrot-copper tubing industry; it's not an actual size.

For information about metal tubing, see page 144.

Metric Copper Tubing

1-meter Straight Lengths
- Temp. Range: –40° to +400° F
- Bendable: No
- Flareable: No
- Half Hard Temper: Moderate tensile (stretching) strength
- Use metric solder-joint copper fittings (see 9395T on pg. 218)

10-meter Coils
- Temp. Range: –40° to +400° F
- Bendable: Yes, by hand
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use metric solder-joint copper fittings (see 9395T on pg. 218)

Also known as Alloy 122, this copper tubing is ideal for use in air conditioning and refrigeration lines. Also use with water, air, natural gas, oil, and hydraulic fluid. Tubing has seamless construction. Meets ASTM B75. Not rated for sterilization.

Tin-Lined Copper Tubing

- Temp. Range: –100° to +400° F
- Bendable: Yes, by hand
- Flareable: No
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use brass compression fittings (see pgs. 168-171)

Lined with 99% pure tin for added corrosion resistance, this tubing has seamless construction. Use with water, air, natural gas, hydraulic fluids, and liquids with high sulfur content. Meets ASTM B75. Not rated for sterilization.

OD	ID	Wall	OD Tolerance	Max. psi @ 100° F	*25-ft. Coils*	Each	*50-ft. Coils*	Each

Copper Tubing with PVC Coating

- Temperature Range: –35° to +221° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use brass compression fittings (see pgs. 168-171)

A 1/32″ thick, black PVC coating protects the outside of this tubing from external corrosion, eliminating the need for on-site sleeving. Tubing has seamless construction. Use with water, air, natural gas, and oil. Meets UL 94V2 for flame resistance, and ASTM B68 and B75. Not rated for sterilization.

Note: The OD and OD tolerance specifications represent the tubing without the coating. You must pull back the coating to attach the fittings.

To Order: Please specify 10- or 50-ft. coil length.

OD	ID	Wall	OD Toler.	Max. psi @ 100° F		Each 10 ft.	Each 50 ft.
1/4″	0.19″	0.03″	±.002″	1,450	3041K11	$27.60	$125.45
3/8″	0.311″	0.032″	±.002″	1,010	3041K12	41.20	187.27
1/2″	0.43″	0.035″	±.002″	810	3041K13	55.60	252.73

Copper Tubing with Yellow Polyethylene Coating

- Temperature Range: –94° to +219° F
- Bendable: Yes, with bending tool
- Flareable: Yes
- Soft (Annealed) Temper: Low tensile (stretching) strength
- Use 45° flared brass fittings (see page 184)

For use with natural gas and liquefied petroleum (LP) gas, the yellow coating on this copper tubing has markings to identify it as a gas line. The coating is made of inert polyethylene and ranges from 0.022″ to 0.025″ thick; it protects the tubing from external corrosion and eliminates the need for on-site sleeving. Tubing has seamless construction. Meets ASTM B75 and B837, as well as NFPA 54 and 58. Not rated for sterilization.

Note: The OD and OD tolerance specifications represent the tubing without the coating. You must pull back the coating to attach the fittings.

To Order: Please specify 60- or 100-ft. coil length.

OD	ID	Wall	OD Toler.	Max. psi @ 100° F		Each 60 ft.	Each 100 ft.

Brass Tubing

- Temperature Range: –40° to +200° F
- Bendable: No
- Flareable: No
- Half Hard H58 Temper: Moderate tensile (stretching) strength
- Connect by soft soldering

Also known as Alloy 260, this multipurpose tubing is the perfect choice for a wide range of plumbing applications. Use with air, natural gas, and gasoline. Tubing has seamless construction. Meets ASTM B135. Tubing can be sterilized with steam (autoclaving).

To Order: Please specify 3- or 6-ft. length.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

About Barbed Tube Fittings

Single-Barbed 90° Elbow

Multi-Barbed 90° Elbow

Use barbed fittings with soft tubing in low-pressure applications. They provide a quick and easy connection without the need for installation tools. Selecting a fitting is easy—barbed fittings are sized to match the inside diameter (ID) of your tubing. To connect, simply slide the tubing over the barbed end of the fitting. In most cases, a clamp is required for securing the tubing to the fitting (clamps sold separately, see pages 274-280).

Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings.

Multi-barbed fittings provide additional contact between the fitting and the tube for extra gripping power.

FDA-Compliant White Nylon Single-Barbed Tube Fittings

CAD

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: –60° to +200° F
- Tubing: Use with PVC, polyurethane, and silicone with a hardness of Shore A 45-90
- Clamps: Required (see pages 274-280)

These high-purity, FDA-compliant nylon fittings are ideal for use with food and beverage applications, as well as with water and air. They are made without a plasticizer that can contaminate fluid passing through. The durable nylon construction means these semi-clear white fittings are impact and abrasion resistant. The single-barbed design minimizes leaks by having a smoother sealing surface than multi-barbed fittings. Fittings can be sterilized with radiation. Not rated for vacuum. Pipe connections are NPT, except for the 10-32 and 1/4″-28 sizes which are UNF straight screw threads. Package quantity is 10.

Durable Nylon Single-Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –60° to +175° F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 75-80
- Clamps: Required (see pages 274-280)

Whether you choose black or white nylon, these durable single-barbed fittings are impact and abrasion resistant. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. They can be sterilized with steam (autoclaving). Not rated for vacuum. Pipe connections are NPT with two exceptions: the 10-32 threads are UNF straight screw threads; and the *through-wall couplings* have an NPSM (National Pipe Straight Mechanical) connection, which is compatible with NPT threads

Through-wall adapters are also known as bulkhead couplings.

All fittings are for use with water, air, and hydraulic fluid. Package quantity is 10, unless noted.

To Order: Please specify color: opaque black or semi-clear white.

Opaque Black — Semi-Clear White

For information about barbed tube fittings, see pg. 156. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Durable Nylon Multi-Barbed Tube Fittings

- Maximum Pressure: 75 psi @ 72° F
- Temperature Range: 32° to 167° F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 45-85
- Clamps: Required (see pages 274-280)

These fittings are made of durable nylon for impact and abrasion resistance, plus they have multiple barbs that provide additional contact between the fitting and the tube for extra gripping power. Use with water, air, and food and beverage. Material is FDA compliant. Not rated for sterilization or vacuum. Pipe connections are NPT with two exceptions: 10-32 threads are UNF straight screw threads; and the *swivel female pipe adapters* have NPSM (National Pipe Straight Mechanical) threads (unless noted), which is compatible with NPT threads.

Metric Nylon and Acetal Multi-Barbed Tube Fittings

- Maximum Pressure: 100 psi @ 72° F
- Temperature Range: 32° to 95° F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 40-80
- Clamps: Required (see pages 274-280)

Sized for metric applications, these multi-barbed fittings provide additional contact between the fitting and the tube for extra gripping power. Use with water, air, gasoline, and solvents. Not rated for sterilization or vacuum. Pipe connections are NPT.

Nylon fittings are impact and abrasion resistant. ***Acetal*** fittings have impact and abrasion resistance that's comparable to nylon, but with less moisture absorption.

Moisture-Resistant White Acetal Single-Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –20° to +280° F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 40-90
- Clamps: Required (see pages 274-280)

Choose these acetal single-barbed fittings over nylon if you want comparable impact and abrasion resistance with less moisture absorption. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Fittings are semi-clear white and are for use with water, air, oil, fuel, and hydraulic fluid. Fittings can be sterilized with steam (autoclaving), radiation, and chemicals. Not rated for vacuum. Pipe connections are NPT, except the 10-32 size which is a UNF straight screw thread.

For information about barbed tube fittings, see pg. 156. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Sanitary White PVDF Single-Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –80° to +225° F
- Tubing: Use with PVC, polyurethane, and polyethylene with a hardness of Shore A 40-90
- Clamps: Required (see pages 274-280)

These fittings have earned the bragging rights for being the most highly rated fittings we offer. The material is FDA CFR 21 177.2600 and USDA compliant, plus it also meets 3-A sanitary requirements. Use them with water, air, beverage, and chlorine. These single-barbed fittings are made of semi-clear white PVDF (polyvinylidene fluoride), which is also known as Kynar. PVDF is a high purity material that has superior chemical resistance along with excellent strength; it also has excellent impact and abrasion resistance. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. They can be sterilized with steam (autoclaving), radiation, and gas. Not rated for vacuum. Pipe connections are NPT.

Antimicrobial Blue Polyethylene Single-Barbed Tube Fittings

- Maximum Pressure: 120 psi @ 72° F
- Temperature Range: –40° to +153° F
- Tubing: Use with antimicrobial polyethylene
- Clamps: Required (see pages 274-280)

A special lining with silver elements is inside these blue single-barbed fittings to inhibit the growth of bacteria, mold, fungi, and other microbes. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Polyethylene has better chemical resistance than nylon, but is not as strong. The material is FDA compliant and is for use with water. Can be sterilized with radiation and gas. Not rated for vacuum. Pipe connections are NPT. Package quantity is 5, unless noted.

For information about barbed tube fittings, see pg. 156. For information about selecting pipe size, see pgs. 2-3.

White Polyethylene Single-Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –50° to +150° F
- Tubing: Use with PVC, polyurethane, and rubber with a hardness of Shore A 40-90
- Clamps: Required (see pages 274-280)

Made of opaque white polyethylene, these general-purpose fittings have better chemical resistance than nylon, but are not as strong. They have a single-barbed design that minimizes leaks by having a smoother sealing surface than multi-barbed fittings. Use with water, air, and food and beverage. Material is FDA CFR21 177.1520 compliant. Fittings can be sterilized with gas. Not rated for vacuum. Pipe connections are NPT. Package quantity is 10, unless noted.

Clear Polycarbonate Single-Barbed Tube Fittings

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: –211° to +275° F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 45-90
- Clamps: Required (see pages 274-280)

These polycarbonate single-barbed fittings are transparent, so you can see what's flowing through your line. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Polycarbonate has high impact strength. Use with water, air, and food and beverage. Material meets FDA CFR21 177.1580. Fittings can be sterilized with steam (autoclaving). Not rated for vacuum. Pipe connections are NPT, except the 10-32 size which is a UNF straight screw thread. Package quantity is 10.

For information about barbed tube fittings, see pg. 156. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″	3/4″	1″

White Polypropylene Single-Barbed Tube Fittings

- Max. Pressure: Standard: 150 psi @ 72° F
  High Temperature: 125 psi @ 72° F
- Temp. Range: Standard: 32° to 150° F
  High Temperature: 32° to 250° F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 75-80
- Clamps: Required (see pages 274-280)

Choose these semi-clear white polypropylene fittings when you need good chemical resistance, but don't require the high strength or impact- and abrasion-resistance of nylon or PVDF. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Use with water, air, ethylene glycol, alcohol, and mild bases. Fittings are not rated for sterilization or vacuum. Pipe connections are NPT except the 10-32 and 1/4″-28 sizes, which are UNF straight screw thread. Package quantity is 10, unless noted.

Type 316L Stainless Steel Single-Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72°F
- Temperature Range: –50° to +850°F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 40-90
- Clamps: Required (see pages 274-280)

Because these single-barbed fittings are made of Type 316L stainless steel, they contain molybdenum, which provides better corrosion resistance than other types of stainless steel. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Use with water, air, gasoline, and acetic acids. Material meets ASTM A240 and ASME SA-240. Fittings can be sterilized with steam (autoclaving) and radiation. Not rated for vacuum.

Type 303 Stainless Steel Multi-Barbed Tube Fittings

- Maximum Pressure: 275 psi @ 72°F
- Temperature Range: –20° to +750°F
- Tubing: Use with PVC and polyurethane with a hardness of Shore A 65-90
- Clamps: Required (see pgs. 274-280)

These Type 303 stainless steel fittings have a surface treatment for enhanced corrosion resistance. They have a multi-barbed design that provides additional contact between the fitting and the tube for extra gripping power. Use with water, air, oil, hydraulic fluid, and food and beverage. Material is FDA compliant and meets ASTM A581 and A582. Not rated for sterilization or vacuum. Pipe connections are NPT.

Fittings with a ***45° flare*** connect to tubing that has been flared to 45°. The *female 45° flare* fittings have a nickel-plated brass nut.

For information about barbed tube fittings, see pg. 156. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″

Miniature Brass Barbed Tube Fittings

- Maximum Pressure: 150 psi @ 72° F
- Temperature Range: –40° to +250° F
- Tubing: Use with polyethylene and polyurethane with a hardness up to Shore A 90
- Clamps: Required (see pages 274-280)

You'll appreciate the compact body on these fittings, especially when working in restricted spaces. They're machined from brass bar stock and have a bright finish. Use with water, air, and oil. Not rated for sterilization. Vacuum rating is 28″ Hg @ 72° F.

Adapters come with a clamp, unless noted. Fittings with a 10-32 thread come with a Buna-N (nitrile) gasket. The fittings with 3-56 and 10-32 thread sizes are UNF straight screw thread. The fittings with 1/16″ and 1/8″ pipe sizes have NPT threads.

High-Pressure Brass and Brass/Stainless Steel Single-Barbed Tube Fittings

- Maximum Pressure: 750 psi @ 125° F
- Temperature Range: –40° to +250° F
- Tubing: Use with polyurethane with a hardness of Shore A 65-90
- Clamps: Required (see pages 274-280)

Ideal for use in pressure-measurement equipment, these compact single-barbed fittings stand up to high pressure. They have a corrosion-resistant brass body with a Type 321 stainless steel barbed end except those for 1/16″ tube ID, which have a brass barbed end. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Use with water, air, oil, and freon. Not rated for sterilization or vacuum. Pipe connections are NPT.

★ Does not have a barb.

Brass Double-Barbed Vacuum Tube Fittings

- Max. Pressure: 100 psi @ 73° F
- Temp. Range: –65° to +75° F
- Tubing: Use with polyethylene with a hardness of Shore A 92
- Clamps: Not required

These fittings have a vacuum rating of 29.9″ Hg @ 72° F, plus they're great in heating and air conditioning applications. Made of extruded Type CA360/CA345 yellow brass, they have two barbs for strong gripping power. Just cut your tubing squarely and push it over both barbs for a strong connection. Use with water and air. Not rated for sterilization. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads. ***Through-wall couplings*** are also known as bulkhead couplings.

Nickel-Plated Brass Barbed Vacuum Tube Fittings

- Max. Pressure: 150 psi @ 75° F except swivel elbows and tees, which are 120 psi @ 75° F
- Temperature Range: –30° to +160° F
- Tubing: Use with polyurethane with a hardness of Shore A 85
- Clamps: Required (see pages 274-280)

The nickel plating gives these brass fittings longer life in corrosive environments, plus the plating won't peel or chip so you can count on it when appearance is important. Use these fittings with water, air, and oil. Not rated for sterilization. Vacuum rating is 28″ Hg @ 75° F.

All of the ***tube-to-threaded pipe connectors*** include a Buna-N (nitrile) O-ring for a tight seal. Thread size connections are UNF straight thread.

The ***swivel 90° elbows*** and ***swivel branch tees*** permit easy adjustments in tight spaces.

Tube-to-Threaded Pipe Connectors

Choose-a-Color Aluminum Single-Barbed Tube Fittings

- Maximum Pressure: 125 psi @ 72° F
- Temperature Range: –40° to +300° F
- Tubing: Use with polyethylene, polypropylene, polyurethane, PTFE, and nylon
- Clamps: Not required

These lightweight, single-barbed fittings are made from 6061-T6 aluminum with an anodized finish to improve corrosion resistance and surface hardness. Single-barbed fittings minimize leaks by having a smoother sealing surface than multi-barbed fittings. Use with water, air, hydraulic fluid, and oil. Vacuum rating is 27″ Hg @ 72° F. Not rated for sterilization.

The fittings with 10-32 and 1/4″-28 thread sizes are UNF straight threads and include a fiber gasket. The fittings with 1/4″ pipe size are NPT threads.

Fittings come in a choice of colors for easy line identification. **To Order:** Please specify color: black, blue, red, or silver.

About Compression Tube Fittings

Compression fittings are for use with hard-plastic and metal tubing. They provide a tight seal around the outside of your tubing without the need for flaring, soldering, or other forms of tubing preparation. Most compression fittings consist of a body, nut, and sleeve (ferrule), however some have the sleeve built right into the nut. Simply insert the tubing into the fitting and tighten the nut; it's the nut and sleeve that form the seal. Unless otherwise stated, you must remove the nut before inserting the tubing.

Durable White Nylon Compression Tube Fittings

- Maximum Pressure (with Copper Tubing):
  1/4″ and 5/16″ OD: 300 psi @ 73° F
  3/8″ OD: 250 psi @ 73° F
  1/2″ OD: 200 psi @ 73° F
- Temperature Range: –40° to +200° F
- Tubing: Use with polyurethane (with a hardness of Shore A 85-95), copper, polyethylene, polypropylene, and nylon

Made of durable nylon, these semi-clear white compression fittings are impact and abrasion resistant. They also have fair chemical resistance. Compression fittings form a seal around the outside of the tubing. Fittings include a body, nut, Type 302 stainless steel grasping ring for securing the tubing, and Buna-N (nitrile) O-ring. Use with water, air, and food and beverage. Material meets FDA CFR21 177 and is NSF 51 certified. Not rated for sterilization. Vacuum rating is 25″ Hg @ 72° F. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads.

Note: The nuts for these fittings have a unique thread style that allows them to work only with the fittings in this presentation.

(Continued on following page)

For information about compression fittings, see pg. 165. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 15/16″, the next highest OD or ID is 1″ and the corresponding pipe size is 3/4″ .

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″	1″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″

Durable White Nylon Compression Tube Fittings *(Continued from previous page)*

- Maximum Pressure (with Copper Tubing):
  1/4″ and 5/16″ OD: 300 psi @ 73° F
  3/8″ OD: 250 psi @ 73° F
  1/2″ OD: 200 psi @ 73° F
- Temperature Range: –40° to +200° F
- Tubing: Use with polyurethane (with a hardness of Shore A 85-95), copper, polyethylene, polypropylene, and nylon

Made of durable nylon, these semi-clear white compression fittings are impact and abrasion resistant. They also have fair chemical resistance. Compression fittings form a seal around the outside of the tubing. Fittings include a body, nut, Type 302 stainless steel grasping ring for securing the tubing, and Buna-N (nitrile) O-ring. Use with water, air, and food and beverage. Material meets FDA CFR21 177 and is NSF 51 certified. Not rated for sterilization. Vacuum rating is 25″ Hg @ 72° F. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads.

Through-wall couplings are also known as bulkhead couplings. They require a 21/32″ hole through the wall for installation, except the coupling for 3/8″ tube OD which requires a 25/32″ hole and the coupling for 1/2″ tube OD which requires a 31/32″ hole.

Nuts include a sleeve, Type 302 stainless steel grasping ring, and a Buna-N (nitrile) O-ring. *Note*: The nuts have a unique thread style that allows them to work only with the fittings in this presentation.

Tube supports (sold separately) are recommended for polyurethane and polyethylene tubing. Pkg. qty. is 10.

White Polypropylene Compression Tube Fittings for Drinking Water

- Maximum Pressure: 220 psi @ 70° F
- Temperature Range: –30° to +215° F
- Tubing: Use with polypropylene, polyethylene, and nylon 11

Use these opaque-white polypropylene fittings with drinking (potable) water—they're NSF 61 certified, so you know they're safe. Polypropylene has good chemical resistance, plus it won't absorb water like nylon, but it's not as impact or abrasion resistant. Compression fittings form a seal around the outside of the tubing. Fittings include a body and nut with a built-in sleeve (ferrule), so there's no need to disassemble the fittings for installation. They can be sterilized with steam (autoclaving) and gas. Not rated for vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

Tube supports (sold separately) are recommended for plastic tubing with a hardness of Shore A 70 or less.

NSF/FDA-Compliant White PVDF Compression Tube Fittings

- Maximum Pressure: 50 psi @ 70° F
- Temperature Range: –40° to +275° F
- Tubing: Use with polyethylene, polypropylene, and nylon 11

In addition to being NSF 61 certified for use with drinking (potable) water, these fittings are FDA CFR21 177.2510 compliant for use with food and beverage, as well as USDA compliant. You can also use them with air, oil, and iodine. They're made of semi-clear white PVDF (polyvinylidene fluoride), which is also known as Kynar. PVDF has excellent chemical resistance and strength. Compression fittings form a seal around the outside of the tubing. They include a body and nut with a built-in sleeve (ferrule), so there's no need to disassemble the fittings for installation. They can be sterilized with steam (autoclaving) and gas. Not rated for vacuum. Nut/tube ends have UNF straight screw threads.

Tube supports (sold separately) are recommended for plastic tubing with a hardness of Shore A 70 or less.

Chemical-Resistant Clear PFA Compression Tube Fittings

- Maximum Pressure: 125 psi @ 70° F
- Temp. Range: –60° to +400° F
- Tubing: Use with PFA (with a hardness of Shore D 60) and PTFE (Shore D 50-65)

Made of clear PFA (perfluoroalkoxy), these fittings offer the best chemical resistance of any compression fittings we offer. Use them with hydrochloric and sulfuric acids, as well as with water, air, and oil. The material is FDA CFR21 177.1550 compliant. Compression fittings form a seal around the outside of the tubing. Fittings include a body, an ETFE gripping ring, a nut, and a sleeve (ferrule). Not rated for sterilization or vacuum. Pipe connections are NPT. Nut/tube ends have UNEF straight screw threads except the 5/16″-20 thread size, which is UN straight screw thread and 1/2″-20 thread size, which is UNF straight screw thread.

Through-wall adapters, which are also called bulkhead couplings, require a hole through the wall that's 1/4″ larger than the tube OD.

Tee

For information about compression fittings, see pg. 165. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 15/16″, the next highest OD or ID is 1″ and the corresponding pipe size is 3/4″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″	1″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″

Brass Compression Tube Fittings

- Max. Pressure: See chart at right
- Temp. Range: −65° to +250° F
- Tubing: Use with polyethylene, polypropylene, nylon, brass, copper, and aluminum

Not only are these brass fittings for use with water, air, and oil, they're also UL listed for use with flammable liquids. They're constructed of forged or extruded brass. Compression fittings form a seal around the outside of the tubing. They can be sterilized with steam (autoclaving). Not rated for vacuum. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads. Nut/tube ends have UN straight screw threads.

Standard fittings have to be disassembled for installation and include a brass body, nut, and sleeve (ferrule). *Plastic sleeves* (sold separately) are required for plastic tubing.

Self-aligning fittings include a brass body and nut with a built-in sleeve (ferrule), so there's no need to disassemble them for installation. They can be used on plastic tubing without changing the sleeve material.

Long nuts give standard fittings extra gripping power in high-vibration applications.

Also Available: Tube supports for use with plastic tubing that has a 5/8″ OD or smaller. They're made of brass except the 1/8″ size, which is copper. All supports come in a package of 10 except the 5/8″ size, which comes in a package of 5. Please ask for 50915K1 and specify tube OD.

Brass Compression Tube Fittings with Tube Supports

- Maximum Pressure: 90 psi @ 73° F
- Temperature Range: –65° to +250° F
- Tubing: Use with polyethylene (with a hardness of Shore A 95)

These fittings come with a forged or bar stock yellow brass body, brass nut, acetal sleeve (ferrule), and a built-in stainless steel tube support that slips inside the tubing to prevent collapsing. Compression fittings form a seal around the outside of the tubing. Use with water, air, and oil. They can be sterilized with steam (autoclaving). Not rated for vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

For information about compression fittings, see pg. 165. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 13/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″

Quick-Assembly Brass Compression Tube Fittings

- Maximum Pressure @ 72° F:
  With Plastic Tubing: 150 psi
  With Copper Tubing: 300 psi
- Temperature Range:
  With Plastic Tubing:
  0° to 150° F
  With Copper Tubing:
  0° to 175° F
- Tubing: Use with polyethylene and polypropylene; fittings with brass sleeves are also for use with PVC, nylon 11, and copper

The body, nut, and sleeve (ferrule) come assembled, so there's no need to remove the nut during installation. Use with water, air, and oil. Compression fittings form a seal around the outside of the tubing. These fittings are made of forged or bar stock yellow brass. They come with a black acetal sleeve and a built-in tube support except the fittings for 1/8″ and 3/16″ tube ODs, which have a brass sleeve and no tube support (tube supports are sold separately). Not rated for sterilization or vacuum. The 10-32 pipe size is a UNF straight screw thread; all other pipe sizes are NPTF (Dryseal), which are compatible with NPT threads. Nut/tube ends have UNF straight screw threads.

Also Available: Department of Transportation (D.O.T.) fittings that are for use with air only. Fittings have brass sleeves. Max. pressure is 150 psi @ 72° F. They are offered in the shapes and sizes marked with a ★ below. Please ask for 51835K1 for fittings that are for use with nylon tubing or 51745K2 for fittings that are for use with copper tubing; also please specify the corresponding part number from the list below that matches the fitting you need.

Also Available: Metric fittings for 4 mm, 6 mm, 8 mm, 10 mm, and 12 mm tube OD. They come in two tube-to-threaded male pipe shapes (adapters and 90° elbows), which include a brass sleeve and no tube support. They also come in two accessory shapes (nuts with brass sleeve and brass sleeves). The pipe connections on the fittings are 1/8″ NPT for the 4 mm fittings, 1/4″ NPT for the 6 mm and 8 mm fittings, 3/8″ NPT for 10 mm fittings, and 1/2″ for the 12 mm fittings. Please ask for 2815K1 and specify the size and shape.

High-Pressure Quick-Assembly Brass Compression Tube Fittings

- Max. Pressure: 800 psi @ 72° F
- Temp. Range: −65° to +250° F
- Tubing: Use with polyethylene, polypropylene, nylon, copper, and aluminum

Get all the benefits of a quick-assembly fitting with the added capability of handling high pressure. The nut and sleeve (ferrule) are one piece; the sleeve breaks away from the nut when the tubing is installed, so there's no need to remove the nut during installation. Compression fittings form a seal around the outside of the tubing. Fittings are made of forged or bar stock yellow brass with a brass sleeve. Use with water, air, and oil. They can be sterilized with steam (autoclaving). Vacuum rating is 29″ Hg @ 72° F. Pipe connections are NPT (unless noted). Nut/tube ends have UNF straight screw threads.

Vibration-Resistant Brass Compression Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –30° to +275° F
- Tubing: Use with seamless and welded copper, aluminum, steel, and stainless steel

A Buna-N (nitrile) rubber sleeve absorbs severe vibration and shock, so these fittings are perfect for high-vibration applications. The sleeve also aligns the tubing and protects it from surface damage. Compression fittings form a seal around the outside of the tubing. Made of forged or bar stock yellow brass. Fittings include a body, nut, and a Buna-N sleeve (ferrule). Use with water, air, oil, lubricants, gasoline, and diesel fuel. They can be sterilized with steam (autoclaving). Vacuum rating is 29.9" Hg @ 73° F. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT. Nut/tube ends have UNF straight screw threads.

Sleeves—Buna-N sleeves are black with a green stripe. Fluoroelastomer sleeves (optional) are black with a red stripe; use in high-temperature applications from –15° to +450° F.

Metric Vibration-Resistant Steel Compression Tube Fittings

- Max. Pressure @ 75° F: 4560 psi, unless noted
- Temperature Range: –30° to +250° F
- Tubing: Use with seamless carbon steel (DIN 2391)

Applications causing unwanted vibration and tube movement have met their match—these fittings have a Buna-N (nitrile) rubber sleeve that absorbs vibration and shock. Designed for metric tubing, they can't be assembled incorrectly because the seals and the gripping rings are integrated into the nut. Compression fittings form a seal around the outside of the tubing. Made of forged or bar stock steel with a zinc-plated finish. Fittings include a body, nut, grasping ring, and sleeve (ferrule). The threaded ends also include a Buna-N O-ring and a retaining ring; those with British Standard Pipe Parallel (BSPP) threads also include a washer. Use with air, diesel fuel, heating oils, and mineral oil. Fittings meet DIN 3861. Not rated for sterilization or vacuum.

Through-wall couplings are also known as bulkhead couplings.

For information about compression fittings, see pg. 165. For information about selecting pipe size, see pgs. 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 15/16″, the next highest OD or ID is 1″ and the corresponding pipe size is 3/4″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″	1″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″

Metric Steel Compression Tube Fittings

- Max. Pressure @ 68° F: 3625 psi
- Temperature Range: –40° to +392° F
- Tubing: Use with seamless carbon steel (DIN 2391)

Connect metric tubing to pipe with NPT, BSPT (British Standard Pipe Tapered), and metric tapered threads with these metric fittings. These fittings do more than just compress the tubing, they also bite into it to minimize leaks. Made of forged carbon steel with a zinc-plated finish, they include a body, nut, and sleeve (ferrule). Use with hydraulic oil. Fittings meet ISO 8434 and the pressure ratings are in accordance with DIN 2401. Not rated for sterilization or vacuum.

Through-wall couplings are also known as bulkhead couplings.

Extreme-Pressure Type 316 Stainless Steel Compression Tube Fittings

- Max. Pressure @ 72° F: 15,000 psi
- Temperature Range: –425° to +1000° F
- Tubing: Use with 9926T Type 316 stainless steel (see page 147)

Completely assembled and ready to use, the unique design makes these the highest pressure rated compression fittings we offer. After inserting your tubing, finger tighten the nut then wrench-tighten 1 1/2 turns. Compression fittings form a seal around the outside of the tubing. They're made of extruded Type 316 stainless steel and include a body, nut, and sleeve (ferrule); the nut has a molybdenum disulfide coating for improved corrosion resistance. Use with water, air, natural gas, oil, and hydraulic fluid. They meet ANSI B31.3. Not rated for sterilization or vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

Steel and Type 316 Stainless Steel Compression Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: Steel: –65° to +400° F Type 316 Stainless Steel: –425° to +1200° F
- Tubing: Use steel fittings with welded steel; use stainless steel fittings with welded or seamless stainless steel

These fittings not only compress, they also bite into the tubing for a strong connection—even in high-vibration applications. Compression fittings form a seal around the outside of the tubing. Fittings include a body, nut, and sleeve (ferrule). Use with water, air, and hydraulic fluid. They meet SAE J514. Not rated for sterilization or vacuum. Nut/tube ends have UNF straight screw threads.

Through-wall couplings are also known as bulkhead couplings.

Steel—Made of forged 12L14 carbon steel with a zinc-plated finish. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads.

Stainless Steel—The bodies and nuts are made of corrosion-resistant Type 316 stainless steel; the sleeves are 17-4 PH stainless steel. Pipe connections are NPT.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″	3/4″	1″

About Yor-Lok Tube Fittings

Also known as instrumentation fittings, Yor-Lok fittings are designed to handle higher pressures than other types of compression fittings. Use them on metal tubing. Yor-Lok fittings consist of a body, nut, and front and back sleeves (double ferrules); two sleeves provide extra gripping strength and ensure a leak-free seal. To install, insert your tubing into a fitting until the tubing bottoms out, then finger-tighten the nut. Continue tightening the nut using a wrench. For 1/16″, 1/8″, and 3/16″ fittings, a 3/4-wrench-turn is all you need; all other sizes need a 1 1/4-wrench-turn.

Type 316 Stainless Steel Yor-Lok Tube Fittings

CAD

- Maximum Pressure: See chart at right
- Temperature Range: –425° to +1200° F
- Tubing: Use seamless or welded Types 304, 304L, 316, or 316L stainless steel that meets ASTM A213, A249, or A269

These stainless steel fittings, which are also known as instrumentation fittings, are great for high-pressure applications in corrosive environments. Use them with water, air, steam, natural gas, gasoline, oil, and hydraulic fluid. Yor-Lok fittings have a body and nut like other compression fittings, but also have front and back sleeves (double ferrules) that form a leak-free seal around the outside of your tubing. Made of forged or bar stock Type 316 stainless steel, they have precision, high-tolerance threads. They are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Fittings can be sterilized with steam (autoclaving). Not rated for vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

Cleaned and Bagged Fittings— Cleaned and individually bagged to prevent moisture and dirt from contaminating the inside.

Through-wall couplings are also known as bulkhead couplings.

Tube stem reducing couplings let you adapt the tube end of an existing fitting to a different tube size without the need for a complete fitting. The stem end on these fittings is a short length of tubing.

♠ Max. pressures (listed at right) are based on Type 304 or 316 annealed stainless steel welded tubing made to ASTM A213, A249, or A269. *Note:* Ratings for seamless tubing are approximately 15-20% higher depending on tube size.

For information about Yor-Lok fittings, see page 174. For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 15/16″, the next highest OD or ID is 1″ and the corresponding pipe size is 3/4″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″	1″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″	3/4″

British Standard Type 316 Stainless Steel Yor-Lok Tube Fittings

- Maximum Pressure: See below
- Temperature Range: –425° to +1200° F
- Tubing: Use with annealed Types 304 or 316 seamless stainless steel that meets ASTM A269

Use these fittings to connect your tubing to BSPT (British Standard Pipe Taper) and BSPP (British Standard Pipe Parallel) threads. Also known as instrumentation fittings, they are great for high-pressure applications in corrosive environments. Yor-Lok fittings have a body and nut like other compression fittings, but also have front and back sleeves (double ferrules) that form a leak-free seal around the outside of your tubing. The male BSPP threads also have a fluoroelastomer O-ring. These fittings are made of forged or bar stock Type 316 stainless steel, and are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Use with water, air, steam, natural gas, oil, gasoline, solvents, and acids. Adapters meet ASTM A479; elbows meet ASTM A182. Fittings are not rated for sterilization or vacuum. Nut/tube ends have UNF straight screw threads. For replacement nuts and sleeves, see 5182K on page 175.

Metric Type 316 Stainless Steel Yor-Lok Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –425° to +1200° F
- Tubing: Use with Types 304 or 316 stainless steel that meets ASTM A213, A249, or A269

Sized for metric tubing, these stainless steel fittings, which are also called instrumentation fittings, are great for high-pressure applications in corrosive environments. Yor-Lok fittings have a body and nut like other compression fittings, but also have front and back sleeves (double ferrules) that form a leak-free seal around the outside of your tubing. Made of forged or bar stock Type 316 stainless steel, they are compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Use with water, air, steam, natural gas, oil, gasoline, solvents, and acids. Fittings are not rated for sterilization or vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

♠Maximum pressures (listed at right) are based on Types 304 and 316 annealed stainless steel welded tubing made to ASTM A213, A249, or A269. *Note*: Ratings for seamless tubing are approximately 15-20% higher depending on tube size.

Quick-Assembly Type 316 Stainless Steel Compression Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: –425° to +1200° F
- Tubing: Use with welded or seamless Types 304 or 316 stainless steel that meets ASTM A213, A249, or A269

Also known as instrumentation fittings, these fittings have one sleeve (ferrule) instead of two for faster assembly. They're made of forged or bar stock Type 316 stainless steel for excellent corrosion resistance, plus the nut has a molybdenum disulfide coating that acts as a lubricant for easy installation. These fittings are compatible with Parker CPI fittings. Compression fittings form a seal around the outside of the tubing. They consist of a body, nut, and sleeve. Use with water, air, steam, natural gas, gasoline, oil, hydraulic fluid, and alcohol. Not rated for sterilization or vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

Tube stems let you adapt the end of an existing fitting without the need for a complete fitting. The stem end on these fittings is a short length of tubing.

Through-wall couplings are also known as bulkhead couplings.

♠ Maximum pressures (shown at right) are based on Types 304 and 316 welded stainless steel tubing made to ASTM A213, A249, or A269. *Note*: Ratings for seamless tubing are approximately 15-20% higher depending on tube size.

For information about Yor-Lok fittings, see page 174. For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″

Brass and Steel Yor-Lok Tube Fittings

- Maximum Pressure: See chart at right
- Temperature Range: Brass: –40° to +400° F Steel: –20° to +800° F
- Tubing: Brass: Seamless copper that meets ASTM B68, B75, or B88 Steel: Use seamless carbon steel that meets ASTM A179 or SAE J524b or J525b

Also called instrumentation fittings, Yor-Lok fittings have a body and nut like other compression fittings, but also have front and back sleeves (double ferrules) that form a leak-free seal around the outside of your tubing, unless noted. They're compatible with Swagelok®, Parker A-Lok, and Let-Lok fittings. Use with air, oil, hydraulic fluid, gasoline, and diesel fuel; brass fittings can also be used with water. Not rated for vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

Tube stems let you adapt the end of an existing fitting without the need for a complete fitting. The stem end is a short length of tubing. They do not include double ferrules.

Through-wall couplings are also known as bulkhead couplings.

Brass fittings are made of forged or bar stock yellow brass and have the highest pressure rating of any brass compression fittings we offer. Brass offers good resistance to corrosion. Not rated for sterilization. For brass instrumentation pipe fittings, see pages 40-41.

Steel fittings are made from forged or bar stock carbon steel with a zinc-plated finish. They offer strength and durability and are ideal for applications that require a high pressure rating in noncorrosive environments. They can be sterilized with steam (autoclaving).

■ Made of Type 316 stainless steel.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″

About Flared Tube Fittings

Flared tube fittings are for use with metal tubing that can be flared. The flared angle on these fittings mates with the flared angle on the tubing for a tight, reliable connection. Flared fittings have a simple design consisting of a body and nut (the 37° flared fittings also require a sleeve). To install, begin by cutting your tubing squarely and removing all burrs. Slide the nut (and sleeve if applicable) onto the tubing, with the threaded end of the nut facing outward. Flare the end of the tubing with a flaring tool (sold separately, see page 2336). Tighten the body onto the nut and the sleeve, making sure the flared end of the tubing is set between them.

Precision Type 304 Stainless Steel 37° Flared Tube Fittings

- Maximum Pressure @ 72° F: 3000 psi
- Temperature Range: –325° to +1200° F
- Tubing: Use with stainless steel

Also known as AN fittings, these fittings are made to exact AS (formerly AN) specifications. Not only are these fittings manufactured to tighter tolerances than other 37° flared fittings, the nut/tube ends have 3A and 3B threads, which adhere to higher tolerances than all other nut/tube end threads. They meet ASTM A380 and SAE AS4841. Fittings are made of forged or bar stock Type 304 stainless steel and are furnished as a body only; nuts and sleeves are sold separately. Use with water, air, oil, and hydraulic fluid. Not rated for sterilization or vacuum. Pipe connections are ANPT, which are compatible with NPT. Nut/tube ends have UNJF straight screw threads.

British Standard Type 316 Stainless Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: –425° to +1200° F
- Tubing: Use flareable seamless or welded Type 304 or Type 316 stainless steel

Also known as JIC (Joint Industrial Council) fittings, these fittings connect BSPT (British Standard Pipe Taper) and BSPP (British Standard Pipe Parallel). They require the use of tubing that has been flared to 37° for a tight seal. All fittings are made of forged or bar stock Type 316 stainless steel and meet SAE J514 and MIL-F-18866. They come with a body; the nuts and sleeves are sold separately on page 181. Fittings with BSPP threads also include an O-ring and bonded washer. The 90° elbow with BSPP threads has an adjustable nut that orients the fitting before connecting. Use with water, air, steam, natural gas, oil, and solvents. Not rated for sterilization or vacuum. Pipe connections are BSPT or BSPP. Nut/tube ends have UNF straight screw threads.

For information about flared fittings, see page 180. For information about selecting pipe size, see pages 2-3.

Type 316 Stainless Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: –425° to +1200° F
- Tubing: Use seamless or welded Type 304 or Type 316 stainless steel that meets ASTM A213, A249, or A269

These fittings are also known as JIC (Joint Industrial Council) fittings. Choose them over 45° flared fittings when your application requires higher pressure ratings. These fittings require the use of tubing that has been flared to 37° for a tight seal. They are made of forged or bar stock Type 316 stainless steel and come with a body; the nuts and sleeves are sold separately. Use them with water, air, natural gas, and solvents. They meet SAE J514 and ISO 8434-3. Not rated for sterilization or vacuum. Pipe connections are NPT. Nut/tube ends have UNF straight screw threads.

Through-wall couplings are also known as bulkhead couplings.

Brass and Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: Brass: –40° to +400° F Steel: –63° to +400° F
- Tubing: Brass: Use flareable seamless copper made to ASTM B75 Steel: Use flareable welded or seamless steel

Just like the stainless steel 37° fittings on page 181, these fittings are also known as JIC (Joint Industrial Council) fittings; however, these are constructed of brass or steel. Choose them over 45° flared fittings when your application requires higher pressure ratings. These fittings require the use of tubing that has been flared to 37° for a tight seal. They come with a body; the nuts and sleeves are sold separately. Not rated for sterilization. Nut/tube ends have UNF straight screw threads.

Brass fittings are made of forged or bar stock CA377, CA360, or CA345 yellow brass. Brass offers good resistance to corrosion. Use these fittings with water, air, natural gas, oil, and solvents. They meet SAE J514 and ISO 8434-1. Not rated for vacuum. Pipe connections are NPT.

Steel fittings are made from forged or bar stock 12L14 carbon steel with a zinc-plated finish. They offer strength and durability. Use with air and hydraulic oil. They meet SAE J514. Vacuum rating is 28″ Hg @ 72° F. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads.

For information about flared fittings, see page 180. For information about selecting pipe size, see pages 2-3.

British Standard/Metric Steel 37° Flared Tube Fittings

- Maximum Pressure: See below
- Temperature Range: –40° to +212° F
- Tubing: Use with flareable SAE seamless carbon steel tubing

Also known as JIC (Joint Industrial Council) fittings, these fittings connect BSPT (British Standard Pipe Taper), BSPP (British Standard Pipe Parallel), and metric straight (DIN 3852) threads. They require the use of tubing that has been flared to 37° for a tight seal. They are made of forged or bar stock carbon steel with a zinc-plated finish and meet SAE J514. Use with oil and hydraulic fluid. They come with a body; the nuts and sleeves are sold separately on page 182. Fittings with BSPP and metric threads also include an O-ring and a washer. The 90° elbows with BSPP threads have an adjustable nut that orients the fitting before connecting. Not rated for sterilization or vacuum. Pipe connections are BSPT or BSPP. Nut/tube ends have UNF straight screw threads.

Compact Aluminum 37° Flared Tube Fittings

- Maximum Pressure @ 72° F: 3000 psi
- Temperature Range: –51° to +302° F
- Tubing: Use with aluminum, steel, and stainless steel

Also known as banjo fittings, these unique fittings have a compact design that permits easy connections in cramped locations. For a basic fitting, you'll need an adapter, bolt, and washer; nuts and sleeves are also required to create a complete fitting that's intended to be connected to tubing. Each component is sold separately. They are made of lightweight aluminum and have a blue anodized finish, except bolts are red and washers are not anodized. They mate with tubing that has been flared to 37° for a tight seal. Use with water, air, oil, and hydraulic fluid. Not rated for sterilization or vacuum. Nut/tube ends have JIC/UNF straight screw threads.

For ***washers***, ***nuts***, and ***sleeves***, the package quantity is 5.

Aluminum 37° Flared Tube Fittings

- Maximum Pressure @ 72° F: 3000 psi, except for the fittings for 1″ tube OD, which are 1500 psi
- Temperature Range: –60° to +400° F
- Tubing: Use with aluminum

Also known as JIC (Joint Industrial Council) fittings, these fittings are constructed of Alloy 2024 or Alloy 2014 aluminum, so they are lighter than similar fittings made of other materials. These fittings require the use of tubing that has been flared to 37° for a tight seal. They have a blue anodized finish except the plugs, which are red. All connectors are furnished as a body; the nuts and sleeves are sold separately. Use with water, air, hydraulic fluid, coolants, engine oil, and fuel. Not rated for sterilization or vacuum. Pipe connections are NPT. Nut/tube ends have UNJ straight screw threads.

Note: The pressure ratings for the nuts and sleeves are equal to the body on which they are used.

For information about flared fittings, see page 180. For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Brass 45° Flared Tube Fittings

- Maximum Pressure: See chart at right
- Temp. Range: −65° to +250° F
- Tubing: Use with flareable aluminum, brass, copper, and welded steel

Also known as SAE (Society of Automotive Engineers) fittings, these fittings are UL listed for flammable liquid, except the solder-joint couplings. They're constructed of forged or bar stock brass and come with a body; nuts are sold separately. These fittings require the use of tubing that has been flared to 45° for a tight seal. Use with water, air, natural gas, oil, diesel fuel, and refrigerants. Not rated for sterilization or vacuum. Pipe connections are NPTF, which are compatible with NPT threads. Nut/tube ends have UNF straight screw threads.

Caps are furnished with a copper gasket.

♠ Pressures are based on use with copper tubing that meets ASTM B75.

For information about selecting pipe size, see pages 2-3.

About Push-to-Connect Tube Fittings

Also known as instant fittings, these fittings provide a quick and easy way to connect and disconnect plastic and soft metal tubing. They form a tight seal around the outside of your tubing—simply insert the tubing into the fitting until it is seated. Depending on the fitting, either an internal grasping ring or a collet and O-ring keep the tubing secured. To disconnect, simply push on the release ring and pull the tubing out of the fitting.

Metric Black Nylon and Nickel-Plated Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 70° F: 290 psi
- Temperature Range: –4° to +175° F
- Tubing: Use nylon (with a hardness of Shore D 50 and D 70), polyethylene (Shore D 44), and polyurethane (Shore A 95)

Sized for metric tubing, glass-filled nylon is strong and durable, plus it offers excellent impact and abrasion resistance. These fittings are for use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All are opaque black except the plugs are opaque red and adapters are nickel-plated brass. They include a stainless steel grasping ring, Buna-N (nitrile) O-ring, and a black polypropylene release ring. Threaded fittings have nickel-plated brass threads; male threads have a PTFE sealant except BSPP and metric straight threads, which have a Buna-N O-ring. They are not rated for sterilization. Vacuum rating is 28″ Hg @ 70° F. All meet ISO 14743.

Pipe connections are either NPT, BSPT (British Standard Pipe Taper, which are also known as R threads), BSPP (British Standard Pipe Parallel, which are also known as G threads), or metric straight threads.

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″

Black Nylon and Nickel-Plated Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 70° F: 290 psi
- Temperature Range: –4° to +175° F
- Tubing: Use nylon (with a hardness of Shore D50 and D70), polyethylene (Shore D44), and polyurethane (Shore A95)

Get the excellent abrasion resistance of nylon along with the added benefit of glass filling for excellent strength, durability, and impact resistance. Use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All have an opaque black body except *plugs* have an opaque red body and *adapters* are nickel-plated brass, unless noted. Fittings include a stainless steel grasping ring, Buna-N (nitrile) O-ring, and black polypropylene release ring. The threads are nickel-plated brass (unless noted); the male threads have a PTFE sealant except the fittings with 10-32 threads, which have a Buna-N O-ring. They're not rated for sterilization. Vacuum rating is 28″ Hg @ 70° F. Fittings meet ISO 14743. Pipe connections are either NPT or BSPT (British Standard Pipe Tapered, which are also known as R threads), except the 10-32 size is a UNF straight screw thread.

90° easy-access elbows are also known as banjo-style elbows. ***Tube stems*** adapt the end of a fitting; the stem end is a short piece of tubing. ***Crosses*** and ***manifolds*** have 11/64″ dia. mounting holes. ***Through-wall couplings*** are also known as bulkhead couplings.

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″

Low-Temperature D.O.T. Black Nylon and Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 70° F: 275 psi
- Temp. Range: –20° to +225° F
- Tubing: Use D.O.T. nylon (see 5097T on page 134)

These fittings meet the Department of Transportation (D.O.T. FMVSS 106) criteria for use in low temperature applications. Unless noted, all fittings have a glass-filled opaque-black nylon body, which offers excellent abrasion resistance, strength, and durability. Use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All fittings include a built-in tube support, brass grasping ring, Buna-N (nitrile) O-ring, and black polypropylene release ring. They are not rated for sterilization. Vacuum rating is 29″ Hg @ 70° F. Pipe connections are NPTF (Dryseal) except where noted; NPTF threads are compatible with NPT threads.

Through-wall couplings are also known as bulkhead couplings.

■ Made from brass.

Polybutylene and Nickel-Plated Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 145 psi
- Temp. Range: 32° to 104° F
- Tubing: Use nylon and polyurethane

In corrosive environments, you can't beat these fittings. Not only will the nickel plating hold up better than uncoated brass, the polybutylene bodies offer excellent abrasion and impact resistance along with excellent strength and durability. Use with water and air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. The adapters are made of nickel-plated brass; all other fittings have a light gray polybutylene body with nickel-plated brass threads. All include a Type 304 stainless steel grasping ring, a Buna-N (nitrile) O-ring, and an orange acetal release ring. They are not rated for sterilization. Vacuum rating is 29.6″ Hg @ 72° F. Pipe connections are NPT and have a PTFE sealant except the 10-32 threads, which are UNF straight screw threads and have a Buna-N O-ring instead of the sealant.

Adapters with hex socket have an internal socket so you can connect threads with a hex key wrench. Great for tight spaces.

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Heat- and Spatter-Resistant Push-to-Connect Tube Fittings

- Max. Pressure @ 72° F: 145 psi
- Temp. Range: 32° to 105° F
- Tubing: Use flame-retardant nylon 12 (see 51185K on page 134) and polyurethane (see 9149T on page 129)

Great for use in welding applications, these fittings meet UL 94V0 for flame resistance. They're made of strong and durable opaque black polybutylene (except plugs, which are green), which has excellent abrasion and impact resistance. Use with water and air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. They have a polyacetal grasping ring, Buna-N (nitrile) O-ring, and green polybutylene release ring. The threads are brass and have a PTFE sealant. Not rated for sterilization. Vacuum rating is 29.52″ Hg @ 72° F. Pipe connections are NPT.

90° elbows and ***tees*** have a 5/32″ mounting hole.

Universal Thread Polybutylene and Brass Push-to-Connect Tube Fittings

- Max. Pressure @ 72° F: 145 psi
- Temp. Range: 32° to 104° F
- Tubing: Use polyurethane (with a hardness of Shore A 88-97) and nylon

Why keep four fittings on hand, when all you need is one? These fittings have a unique male thread and an O-ring that allow them to mate with multiple types of threads, such as NPT, NPTF (Dryseal), BSPT (British Standard Pipe Taper, which are also known as R threads), and BSPP (British Standard Pipe Parallel, which are also known as G threads). All are made of polybutylene, except the adapters are brass. Polybutylene offers excellent abrasion and impact resistance along with excellent strength and durability. Use with water and air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All fittings include an acetal grasping ring and a Buna-N-coated stainless steel O-ring. The inch sizes have a red acetal release ring; the metric sizes have a blue acetal release ring. Threads are brass. They are not rated for sterilization. Vacuum rating is 29.53″ Hg @72° F.

Swivel wyes have a 5/32″ mounting hole for securing the fitting.

Also Available: Antistatic polybutylene metric fittings. For use with air only. All have nickel-plated brass male threads. Choose from adapters, swivel 90° elbows, swivel branch tees, and swivel run tees. Please ask for 5787K1 and specify the corresponding metric part number from below.

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″

Polybutylene and Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 145 psi
- Temperature Range: 32° to 104° F
- Tubing: Use polyurethane (with a hardness of Shore A 88-97) and nylon

Strength and durability are just two of polybutylene's good points—it also offers excellent abrasion and impact resistance. Use with water and air. These fittings are made of polybutylene, except the adapters and through-wall couplings are brass. All include an acetal grasping ring, Buna-N (nitrile) O-ring, and acetal release ring (unless indicated otherwise). Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. They are not rated for sterilization. Vacuum rating is 29.53″ Hg @ 72° F.

Tube-to-Threaded Pipe Connectors— Have brass threads; the male threads have a PTFE sealant except on the metric straight threads which have no sealant. The *swivel wyes* have 5/32″ mounting holes. Pipe connections are NPT, BSPT (British Standard Pipe Taper, which are also known as R threads), or metric straight threads.

Tube-to-Tube Connectors— The 90° elbows, tees, and wyes have 5/32″ mounting holes.

Through-wall couplings are also known as bulkhead couplings.

Fixed manifolds have two 11/64″ mounting holes. Manifolds with female pipe threads include one plug. Metric sizes have a polybutylene release ring and meet UL 94V0.

Swivel manifolds rotate 360° for easy alignment.

Tube-to-Threaded Pipe Connectors

Fittings marked with a ♥ come in your choice of light gray or opaque black. The ***adapters*** are brass and the ***90° female pipe elbows*** are light gray. **To Order:** Where indicated with a ♥, please specify light gray or opaque black.

Push-to-Connect Tube Fittings

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/8″	1/4″	3/8″	1/2″

Rotating Polybutylene Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 145 psi
- Temperature Range: 23° to 140° F
- Tubing: Use polyurethane (with a hardness of Shore A 88-97) and nylon

Steel ball bearings allow fittings to rotate 360°. Use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. These fittings are made of polybutylene with nickel-plated brass threads. Polybutylene has excellent strength, durability, abrasion resistance, and impact resistance. Fittings include a Type 304 stainless steel grasping ring, a Buna-N (nitrile) O-ring, and a blue acetal release ring. They are not rated for sterilization. Vacuum rating is 29.6″ Hg @ 72° F.

Inch fittings have NPT threads with a PTFE thread sealant except the 10-32 size, which is a UNF straight thread with no thread sealant. ***Metric*** fittings have metric tapered pipe threads with no thread sealant.

Moisture-Resistant Acetal Push-to-Connect Tube Fittings

- Maximum Pressure @ 73° F: 5/32″ to 5/16″: 230 psi; 3/8″ to 1/2″: 150 psi
- Temperature Range: 33° to 158° F
- Tubing: Use nylon (with a hardness of Shore D 50-70), polyethylene (Shore D 50-70), brass, and copper

Because they offer low moisture absorption, these acetal fittings are ideal for use in high-humidity environments. Acetal also provides excellent durability along with good strength, abrasion resistance, and impact resistance. All meet NSF 51 and 61 for use with drinking (potable) water, as well as FDA CFR21 177.2600 and 177.2470 for use with food and beverage. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. Fittings are not rated for sterilization or vacuum. Pipe connections are either NPTF (Dryseal), BSPT (British Standard Pipe Taper, which are also known as R threads), or UNF straight threads.

Through-wall couplings are also known as bulkhead couplings. ***Tube stems*** adapt the end of an existing fitting; the stem end is a short piece of tubing. ***Locking clips*** secure the release ring to prevent it from disconnecting; color is red.

All fittings are gray, except those marked with a ♣, which come in your choice of gray or white. The gray fittings have a Buna-N (nitrile) O-ring and a gray acetal release ring with stainless steel teeth; gray fittings can also be used with air. The white fittings have an EPDM O-ring and a white acetal release ring with stainless steel teeth. **To Order:** Where indicated with a ♣, please specify color: gray or white.

Push-to-Connect Tube Fittings

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/8″	1/4″	3/8″	1/2″

Drill-and-Install Acetal and Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 1/4″ Tube OD: 230 psi; 3/8″ and 1/2″ Tube ODs: 150 psi
- Temperature Range: 33° to 158° F
- Tubing: Use polyethylene and nylon (with a hardness of Shore D 50-70), brass, and copper

Drill a stepped hole. (Instructions are included.)

Insert the body, O-ring, and release ring.

Use these fittings to create a push-to-connect connection in equipment and on other plastic or metal surfaces. Fittings are FDA compliant for use with food and beverage; also use with water, air, and oil. To install, drill a stepped hole into your surface, then insert the fitting's body, O-ring, and release ring (complete installation instructions are included). Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. They can be sterilized with chemicals. Vacuum rating is 29.9″ Hg @ 72° F.

All fittings have a Buna-N (nitrile) O-ring and a gray acetal release ring. Fittings with ***acetal*** bodies have stainless steel teeth molded into the outer diameter for gripping power. Acetal offers low moisture absorption, so it's ideal for use in high-humidity environments. Acetal also has excellent durability, strength, and impact resistance, along with good abrasion resistance. The fittings with a ***brass*** body have good corrosion resistance.

For Tube OD	Acetal Body for Plastic	Each	Brass Body for Metal	Each
1/4″	5472K11	$3.82	5472K21	$4.24
3/8″	5472K12	3.99	5472K22	4.43
1/2″	5472K13	5.09	5472K23	5.61

Metric Black Acetal Push-to-Connect Tube Fittings

- Maximum Pressure @ 73° F: 4 mm to 8 mm: 230 psi; 10 mm and 12 mm: 150 psi
- Temperature Range: 33° to 158° F
- Tubing: Use polyethylene and nylon (with a hardness of Shore D 50-70), brass, and copper

Sized for metric tubing, these acetal fittings offer low moisture absorption, so they're ideal for use in high-humidity environments. Acetal has excellent durability, strength, and impact resistance, along with good abrasion resistance. Fittings are FDA CFR21 177.2600 and 177.2470 compliant for use with food and beverage; they're also NSF 51 and 61 certified for use with drinking (potable) water. You can also use them with air and oil. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All fittings have an acetal grasping ring with stainless steel teeth, Buna-N (nitrile) O-ring, and black acetal release ring. Color is opaque black, except the plugs are red. They can be sterilized with nonacidic chemicals. Vacuum rating is 29″ Hg at 70° F. Pipe connections are BSPP (British Standard Pipe Parallel, which are also known as G threads) or BSPT (British Standard Pipe Taper, which are also known as R threads). The BSPP threaded fittings come with a Buna-N O-ring for a tight connection.

Tube stems adapt the end of a fitting; the stem end is a short piece of tubing.

Through-wall couplings are also known as bulkhead couplings.

White Polypropylene Push-to-Connect Tube Fittings

- Max. Pressure @ 70° F: 150 psi
- Temp. Range: 33° to 140° F
- Tubing: Use polyethylene and nylon (with a hardness of Shore D 50-70), brass, and copper

Use these opaque white polypropylene fittings with food and beverage—all are FDA CFR21 177.2600 and 177.2470 compliant. They're also NSF 51 and 61 certified for use with drinking (potable) water. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All fittings have a polypropylene grasping ring with stainless steel teeth, an EPDM O-ring, and a white polypropylene release ring. They can be sterilized with nonacidic chemicals. Not rated for vacuum. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT.

Tube stems adapt the end of a fitting; the stem end is a short piece of tubing.

Also Available: UV-resistant black polypropylene fittings that protect against the damaging effects of the sun. They meet NSF 58 for use in drinking (potable) water systems. Please ask for 5562K1 and specify the part number of the corresponding fitting from the listing below.

Push-to-Connect Tube Fittings

For information about push-to-connect fittings, see page 165; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Metric Clean Room Polypropylene Push-to-Connect Tube Fittings

- Max. Pressure @ 72° F: 142 psi
- Temp. Range: 32° to 104° F
- Tubing: Use polypropylene

Double bagged and ready for use in Class 1000 clean room environments. Use these semi-clear white metric fittings with water, air, and nitrogen gas. Polypropylene has excellent strength and durability. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All have a polypropylene grasping ring, an EPDM O-ring, and a green polypropylene release ring. Not rated for sterilization. Vacuum rating is 29.52″ Hg @ 72° F.

Tube-to-Threaded Pipe Connectors— Pipe connections are BSPT (British Standard Pipe Taper, which are also known as R threads).

Tube-to-Tube Connectors— 90° elbows and tees have 5/32″ mounting holes.

Moisture-Resistant Black Push-to-Connect Tube Fittings

- Max. Pressure @ 72° F: 150 psi
- Temperature Range: 32° to 125° F
- Tubing: Use polyurethane and PVC (with a hardness of Shore A 80-90) and polyethylene (Shore D 65)

All of these fittings have a polyester grasping ring that will not soften—it maintains its gripping power, even in high-humidity environments. They have a nylon body except the female elbows, 4-outlet manifolds, and plugs, which have a brass body. Threads are nylon, unless noted. Nylon has excellent abrasion resistance along with good strength and durability; brass offers good corrosion resistance. Use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. The swivel elbows, tees, and manifolds have a Buna-N (nitrile) O-ring. All fittings have a black nylon release ring. They can be sterilized with radiation. Not rated for vacuum. Pipe connections are NPT, except the 10-32 size is a UNF straight thread.

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Chemical-Resistant PVDF Push-to-Connect Tube Fittings

- Maximum Pressure @ 73° F: 300 psi
- Temperature Range: 0° to 275° F
- Tubing: Use PVDF, polyethylene, polypropylene, and nylon

PVDF (polyvinylidene fluoride), which is also known as Kynar, is resistant to most chemicals and solvents. These fittings are NSF 51 certified and FDA CFR21 177.2510 compliant for use with food and beverage. Also use with water, air, chlorine, and sulfuric acid. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All are semi-clear white. Fittings have a plastic grasping ring, fluoroelastomer O-ring, and a gray plastic release ring. Not rated for sterilization. Vacuum rating is 28″ Hg @ 73° F. Pipe connections are NPTF (dryseal); NPTF threads are compatible with NPT.

Tube stems adapt the end of a fitting; the stem end is a short piece of tubing.

Type 316 Stainless Steel Push-to-Connect Tube Fittings

- Maximum Pressure @ 70° F: 290 psi
- Temperature Range: 5° to 230° F
- Tubing: Use polyurethane (with a hardness of Shore A 95), polyethylene (Shore D 44), and nylon (Shore D 50 and D 70)

Choose these Type 316 stainless steel fittings for highly corrosive environments. Use with water, deionized water, air, oil, acetone, and ethyl alcohol. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. Fittings have a Type 303L stainless steel grasping ring, fluoroelastomer O-ring, and Type 303L stainless steel release ring. Not rated for sterilization or vacuum. Pipe connections are NPT, except the 10-32 size is a UNF straight thread.

Adapters with hex sockets have an internal socket so you can connect threads with a hex key wrench; great for tight spaces. ***Tube stems*** adapt the end of a fitting; the stem end is a short piece of tubing. ***Through-wall couplings*** are also known as bulkhead couplings.

Also Available: Metric fittings for 4 mm, 6 mm, and 8 mm tube ODs. They come in two tube-to-threaded pipe shapes (90° elbows and tube stems) with 1/8″ and 1/4″ male pipe size. Please ask for 5566K1 and specify the tube OD, pipe size, and shape.

Push-to-Connect Tube Fittings

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD or ID is 3/4″ and the corresponding pipe size is 1/2″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″

Nickel-Plated Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 260 psi, except the tube stem couplings and plugs are rated 150 psi
- Temperature Range: 0° to 175° F, except the tube stem couplings and plugs are 32° to 140° F
- Tubing: Use polyethylene (with a hardness of Shore D 44), polyurethane (Shore A 95), and nylon (Rockwell R 78)

The nickel plating not only provides better corrosion resistance than nonplated brass, it also gives these fittings a bright, clean appearance. Use these fittings with water, air, and noncombustible and nonreactive gases. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All are made of nickel-plated brass except the tube stem couplings and plugs, which are black PBT (polybutylene terephthalate). Fittings have a nickel-plated brass grasping ring, Buna-N (nitrile) O-ring, and nickel-plated brass release ring. They can be sterilized with chemicals. Vacuum rating is 29.5″ Hg @ 72° F.

Tube-to-Threaded Pipe Connectors— Have a white sealant on the threads. Pipe connections are NPT, except the 10-32 size is a UNF straight thread.

Tube stems adapt the end of a fitting; the stem end is a short piece of tubing. ***Easy-access 90° elbows*** and ***tees*** are also known as banjo style. ***Through-wall couplings*** are also called bulkhead couplings.

FDA-Compliant Nickel-Plated Brass Push-to-Connect Tube Fittings

- Max. Pressure @ 72° F: 290 psi
- Temp. Range: –4° to +250° F
- Tubing: Use polyethylene (with a hardness of Shore D 44), polyurethane (Shore A 95), and nylon (Shore D 50 and D 70)

A special FDA-compliant nickel-plated coating allows these forged CA360 brass fittings to be used with food and beverage in addition to water and air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. Fittings have a nickel-plated brass grasping ring, fluoroelastomer O-ring, and nickel-plated brass release ring. Not rated for sterilization or vacuum. Pipe connections are NPT or BSPT (British Standard Pipe Taper, which are also known as R threads).

Tube stems adapt the end of a fitting; the stem end is a short piece of tubing.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	5/16″	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/16″	1/8″	1/4″	3/8″	1/2″	3/4″	1″

Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 73° F:
  Brass: 300 psi;
  Nylon: 150 psi
- Temperature Range:
  Brass: 0° to 200° F;
  Nylon: 0° to 150° F
- Tubing: Use polyethylene, polypropylene, and nylon

Use these fittings outdoors or wherever corrosion is a concern. All are made of forged brass except the wye, tube stem wye, tube stem reducing couplings, tube stem couplings, and plugs are nylon. Use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. Fittings have a stainless steel grasping ring, Buna-N (nitrile) O-ring, and acetal release ring (unless noted). Not rated for sterilization or vacuum. Pipe connections are NPTF (Dryseal), except the 10-32 size is a UNF straight thread. NPTF threads are compatible with NPT threads. Male threads have an acrylic thread sealant, except the 10-32 size has no sealant.

Through-wall couplings are also called bulkhead couplings. ***Tube stems*** adapt the end of a fitting; the stem end is a short piece of tubing.

For information about push-to-connect fittings, see page 185; about selecting pipe size, see pages 2-3.

Low-Temperature D.O.T. Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: –40° to +212° F
- Tubing: Use D.O.T. nylon (see 5097T on page 134)

In addition to having the lowest temperature rating of all our brass push-to-connect fittings, these also meet Department of Transportation criteria FMVSS 571.106 and SAE J1131 for air brake performance. Use with air. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. All are made of forged or bar stock brass, except the plugs are nylon. Fittings have a brass grasping ring, Buna-N (nitrile) O-ring, and brass release ring. Not rated for sterilization. Vacuum rating is 26″ Hg @ 72° F. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads. Male threads have a latex-based sealant.

Aluminum Manifolds with Brass Push-to-Connect Tube Fittings

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: –10° to +200° F
- Tubing: Use D.O.T. nylon (see 5097T on page 134), polyethylene, and polyurethane

Connect several air lines to one common supply. Push-to-connect fittings form a seal around the outside of the tubing; no tools are needed to release the tubing from the fitting. Manifolds are made of Alloy 6061-T6 anodized aluminum and have 3/16″ mounting holes. Fittings are made from bar stock CA360 brass; they have a Buna-N (nitrile) O-ring and a brass release ring. Use a plug to block off any unused outlet (see page 221 for plugs). Not rated for sterilization or vacuum. Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads.

6 Outlets

Brass Push-to-Connect Tube Fittings for Copper Tubing

- Maximum Pressure @ 72° F: 200 psi
- Temperature Range: 32° to 200° F
- Tubing: Use copper (Types K, L, and M), CPVC, and PEX

Now you can get a pressure-rated connection on copper tubing without the need for flux, solder, and heat. These forged brass push-to-connect fittings are NSF 61 certified for use with drinking (potable) water in all states as of April 1, 2010. Also use with air. Push-to-connect fittings form a seal around the outside of the tubing; a release tool (included) is needed to remove the tubing from the fitting. Fittings have a Type 316 stainless steel grasping ring, EPDM O-ring, and plastic release ring. Not rated for sterilization or vacuum. All meet ASSE 1061 standards. Pipe connections are NPT.

Tube-to-Threaded Pipe Connectors

▲ Copper tube size is the accepted designation of the copper tubing industry, not the actual size.

Quick-Disconnect Tube Couplings

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size (NPT) is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD measures 5/16″, the next highest OD is 3/8″ and the corresponding pipe size is 1/8″.

Threaded Fitting OD	3/8″	1/2″	5/8″	3/4″
Pipe Size (NPT)	1/8″	1/4″	3/8″	1/2″

About Quick-Disconnect Tube Couplings

Quick-disconnect couplings are ideal when you want to frequently connect and disconnect tubing. Also known as quick-connect couplings, a complete coupling consists of a plug and a socket of the same coupling size. To connect, insert the plug into the socket. This connection also permits 360° swiveling, so tubing won't twist and kink. To disconnect, simply press the latch and remove the plug. You can determine the actual dimension of the plug and socket by measuring the OD of the plug (A) and the ID of the socket (B).

NSF-Certified White Acetal Quick-Disconnect Tube Couplings

- Max. Pressure @ 70° F: 120 psi
- Temperature Range: 0° to 180° F
- Tubing: Use with polyurethane with a hardness of Shore A 68-A 80 for barbed couplings; polyethylene and nylon with a hardness of Shore A 82-D 60 for compression couplings
- Clamps: Recommended with barbed fittings (see pgs. 274-280)

A winning combination—these fittings are NSF C-2 certified for use with food and beverage plus they're made of moisture-resistant acetal, so they'll stand up in high-humidity environments. Acetal also has good strength, abrasion resistance, and impact resistance. Quick-disconnect couplings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. These fittings are white and include an EPDM O-ring; the sockets have an acetal latch. They can be sterilized with chemicals. Vacuum rating is 200 Hg @ 70° F.

Plugs and sockets ***with shut-off valve*** stop flow when coupling is separated. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

Barbed Couplings— Insert the barbed end into tubing and secure with a clamp.

Also Available: Couplings marked with a ▲ also come with a compression end. For plugs, please ask for 5923K1; for sockets, please ask for 5923K2. Also, please specify your tube OD (1/4″ or 3/8″).

Moisture-Resistant Acetal Quick-Disconnect Tube Couplings

- Maximum Pressure @ 70° F: 100 psi
- Temperature Range: –40° to +180° F
- Tubing: Use with polyurethane with a hardness of Shore A 68-A 80 for barbed couplings; polyethylene and nylon with a hardness of Shore A 82-D 60 for compression couplings
- Clamps: Recommended with barbed fittings (see pages 274-280)

Because acetal offers low moisture absorption, these fittings are ideal for high-humidity environments. Use with water, air, ethanol, and methanol. Acetal has good strength, abrasion resistance, and impact resistance.

All are quick-disconnect couplings except those with a 3/32 coupling size, which are twist-lock style. Quick-disconnect fittings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. All couplings are white and include a Buna-N (nitrile) O-ring. The sockets have a Type 301 stainless steel latch except the couplings with 3/32 coupling size, which do not have a latch. They can be sterilized with steam (autoclaving) and chemicals. Vacuum rating is 20″ Hg @ 70° F.

Plugs and sockets ***with shut-off valve*** stop flow when coupling is separated. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

Through-wall couplings are also known as bulkhead couplings. Couplings with 3/32 coupling size require a 7/16″ hole for mounting; 1/8 coupling size requires a 1/2″ hole size and 1/4 coupling size requires an 11/16″ hole size.

Compression Tube Couplings— Insert the tubing into the plug or socket and tighten the nut to form a tight seal around the tubing's OD.

Barbed Tube Couplings— Insert the barbed end into tubing and secure with a clamp. The couplings for 1/16″ tube ID have a collar that limits the size of the tubing to 1/8″ maximum OD.

NSF-Certified Gray Polypropylene Quick-Disconnect Tube Couplings

- Maximum Pressure @ 70° F: 60 psi
- Temperature Range: 32° to 160° F
- Tubing: Use with polyurethane with a hardness of Shore A 68-A 80 for barbed couplings
- Clamps: Recommended with barbed fittings (see pages 274-280)

Not only are these polypropylene fittings NSF C-2 certified for use with food and beverage, you can also use them with water, air, ammonia, ethanol, and methanol. Polypropylene offers better chemical resistance than acetal. Quick-disconnect couplings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. These fittings are light gray and include an EPDM O-ring; the sockets have a polypropylene latch. They can be sterilized with chemicals. Vacuum rating is 20″ Hg @ 70° F.

Plugs and sockets ***with shut-off valve*** stop flow when coupling is separated. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

Through-wall couplings are also known as bulkhead couplings. They require a 1 7/32″ dia. hole for mounting.

Barbed Couplings— Insert the barbed end into tubing and secure with a clamp.

Note: For a complete coupling, order a plug and a socket with the same coupling size.

Quick-Disconnect Tube Couplings

For information about quick-disconnect couplings, see page 202; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size (NPT and NPTF) is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 5/16″, the next highest OD or ID is 3/8″ and the corresponding pipe size is 1/8″.

Threaded Fitting OD	3/8″	1/2″	5/8″	3/4″
Pipe Size (NPT and NPTF)	1/8″	1/4″	3/8″	1/2″

Polypropylene Quick-Disconnect Tube Couplings

- Maximum Pressure @ 70° F: 1/8-1/4 Coupling Sizes: 120 psi 3/8 Coupling Size: 60 psi
- Temperature Range: 32° to 160° F
- Tubing: Use with polyurethane with a hardness of Shore A 68-80
- Clamps: Recommended with barbed fittings (see pages 274-280)

Choose polypropylene couplings over acetal for better chemical resistance. Use with water, air, ammonia, ethanol, and methanol. Quick-disconnect couplings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. These couplings come with an EPDM O-ring. They can be sterilized with chemicals. Vacuum rating is 20″ Hg @ 70° F.

Plugs and sockets ***with shut-off valve*** stop flow when coupling is separated. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

1/8 and 1/4 Coupling Sizes— Color is almond with a stainless steel latch.

3/8 Coupling Size— Color is gray with a polypropylene latch.

Through-wall couplings are also known as bulkhead couplings. Plugs and sockets with 1/8 coupling size require a 1/2″ hole for mounting; those with 1/4 coupling size require an 11/16″ hole size; those with 3/8 coupling size require a 17/32″ hole size.

Barbed Couplings— Insert the barbed end into tubing and secure with a clamp.

Note: For a complete coupling, order a plug and a socket with the same coupling size.

For information about quick-disconnect couplings, see page 202; about selecting pipe size, see pages 2-3.

Type 316 Stainless Steel Quick-Disconnect Tube Couplings

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: 0° to 150° F
- Tubing: Use with polyethylene and polypropylene

Made of Type 316 stainless steel for excellent strength and corrosion resistance, you can use these couplings with water, air, oil, gasoline, enamel, and caustic soda. Quick-disconnect couplings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. All have a fluoroelastomer O-ring. They are not rated for sterilization or vacuum.

Plugs and sockets ***with shut-off valve*** stop flow when coupling is separated. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

Through-wall couplings are also known as bulkhead couplings. Sockets with 1/4 coupling size require a 1/2″ dia. hole for mounting; those with 3/8 coupling size require an 11/16″ dia. hole.

Threaded Couplings— Pipe connections are NPTF (Dryseal); NPTF threads are compatible with NPT threads.

Compression Couplings— Insert the tubing into the plug or socket and tighten the nut to form a tight seal around the tubing's OD.

Note: For a complete coupling, order a plug and a socket with the same coupling size.

Also Available: Chrome-plated brass couplings with a Buna-N O-ring for use with air and enamel. Please ask for 5327K1 and specify the corresponding stainless steel part number from the listing below.

Miniature Nickel-Plated Brass Quick-Disconnect Tube Couplings

- Maximum Pressure @ 72° F: 700 psi
- Temperature Range: –30° to +250° F
- Tubing: Use with flexible plastic and rubber
- Clamps: Required with barbed fittings (see pages 274-280)

Cramped spaces are not a problem for these compact fittings—these quick-disconnect couplings don't have a latch, so connecting and disconnecting is as easy as pushing and pulling. Use with air. Quick-disconnect couplings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. All are made of nickel-plated brass and come with a Buna-N (nitrile) O-ring. They are not rated for sterilization or vacuum.

Sockets ***with shut-off valve*** stop flow when coupling is separated. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

Through-wall couplings are also known as bulkhead couplings.

Threaded Couplings— Pipe connections are NPT for the 1/8″ size, UNF straight thread for the 10-32 size.

Barbed Couplings— Insert the barbed end into tubing and secure with a clamp.

Note: For a complete coupling, order a plug and a socket with the same coupling size.

Quick-Disconnect Tube Couplings

For information about quick-disconnect couplings, see page 202; about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size (NPT) is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD measures 5/16″, the next highest OD is 3/8″ and the corresponding pipe size is 1/8″.

Threaded Fitting OD	3/8″	1/2″	5/8″
Pipe Size, NPT	1/8″	1/4″	3/8″

Chrome-Plated Brass Quick-Disconnect Tube Couplings

- Maximum Pressure @ 70° F: 250 psi
- Temperature Range: –40° to +180° F
- Tubing: Use with polyurethane with a hardness of Shore A 68-A 80 for barbed couplings; nylon and polyethylene with a hardness of Shore A 82-D 60 for compression couplings
- Clamps: Recommended with barbed fittings (see pages 274-280)

Offering more than just good looks, these chrome-plated brass couplings also withstand more pressure than our other quick-disconnect tube couplings of similar size. Use with air, oxygen, methanol, and ethylene glycol. Quick-disconnect couplings are also known as quick-connect couplings; they're ideal if you need to frequently connect and disconnect your line. These couplings come with a Buna-N (nitrile) O-ring. They can be sterilized with steam (autoclaving) and chemicals. Vacuum rating is 20″ Hg @ 70° F.

Plugs and sockets ***with shut-off valve*** stop flow when coupling is separated; the valve is made of acetal. Plugs and sockets ***without shut-off valve*** do not have a valve to shut off flow.

Through-wall couplings are also known as bulkhead couplings. Plugs and sockets with 1/8 coupling size require a 1/2″ hole for mounting; those with 1/4 coupling size require an 11/16″ hole size.

Compression Couplings— Insert the tubing into the plug or socket and tighten the nut to form a tight seal around the tubing's OD.

Barbed Couplings— Insert the barbed end into tubing and secure with a clamp.

Note: For a complete coupling, order a plug and a socket with the same coupling size.

Plastic Quick-Turn (Luer Lock) Tube Couplings

- Maximum Pressure @ 72° F: 125 psi
- Temperature Range: Nylon and polycarbonate: –60° to +200° F; Polypropylene: +32° to +200° F
- Tubing: PVC and silicone (both with a hardness of Shore A 40-65)
- Clamps: Not required

Also known as Luer Lock couplings, it only takes a quarter turn to connect and disconnect these economical couplings. They have a universal connection, so any female plastic quick-turn coupler can connect to any male plastic quick-turn coupler, regardless of size or style. All meet ISO 594-1. Not rated for sterilization or vacuum.

Nylon couplings are for use with water and air. They have good strength, abrasion resistance, and impact resistance. Color is opaque white. ***Polypropylene*** couplings are for use with water and air. They have fair strength, abrasion resistance, and impact resistance. Color is semi-clear white. ***Polycarbonate*** couplings are for use with air. They have good strength, abrasion resistance, and impact resistance. Color is clear.

Threaded Couplings— Have male UNF straight screw threads.

Barbed Couplings— Insert the barbed end into tubing.

Note: For a complete coupling, order a female and male coupler. Pkg. qty. is 10.

Nickel-Plated Brass Quick-Turn (Luer Lock) Tube Couplings

- Maximum Pressure @ 72° F: 30 psi
- Temperature Range: –100° to +350° F
- Tubing: Use polyurethane, PVC, and silicone
- Clamps: Required for barbed couplings (see pages 274-280)

Commonly called Luer Lock couplings, these nickel-plated brass quick-turn couplings connect and disconnect with a quarter turn. Use with air and hydraulic fluid. They have a universal connection, so any size female metal quick-turn coupler can connect to any size male metal quick-turn coupler, regardless of size or shape. All meet ANSI MD70.1-1955.They can be sterilized with steam (autoclaving) and chemicals. Not rated for vacuum.

Threaded Couplings— Pipe connections are male NPT for the 1/8″ and 1/4″ sizes, male UNF straight screw threads for the 10-32 size.

Barbed Couplings— Insert the barbed end into tubing and secure with a clamp.

Note: For a complete coupling, order a female and a male coupler.

Also Available: Couplings marked with a ♥ also come in Type 316 stainless steel. Please ask for 5194K1 and specify the corresponding nickel-plated brass part number from the listing below. *Note:* The threaded stainless steel couplings have a 1/4″-28 thread size, not 10-32.

High-Polish Sanitary Stainless Steel Quick-Clamp Tube Fittings

- Maximum Pressure: See clamps below
- Temperature Range:
  With Buna-N Gasket: –30° to +200° F;
  With PTFE Gasket: –100° to +500° F
  With Fluoroelastomer Gasket: –20° to +400° F;
- Tubing: Use with 4466K on page 144

For information about how to measure Quick-Clamp Tube Fittings, go to mcmaster.com and search for **4322KAC**.

Also known as tri-clamps, these fittings open easily by hand or wrench to allow quick access to your lines. All meet 3-A sanitary requirements, except the clamps shown below and all of the adapters on page 210. Use with dairy, water, and air, except the adapters on page 190 are not for use with dairy. They can be sterilized with steam (autoclaving). Not rated for vacuum.

Note: For a complete connection, you'll need a clamp, gasket, and two fittings or adapters.

Clamps— Made of Type 304 stainless steel, the type and size of the clamp dictates the amount of pressure a connection can withstand. The *high-pressure clamps* are secured by two bolts and require a wrench to assemble.

Gaskets— The gasket material dictates the temperature range for the connection. For more gaskets, see page 3481.

Fittings and Adapters— Polished to a 32Ra finish on the OD and a 23Ra-32Ra finish on the ID. *Type 304 stainless steel* has good corrosion resistance. *Type 316L stainless steel* has excellent corrosion resistance.

Quick-clamp to butt-weld tube adapters are also known as ferrules; you weld the butt-weld end to your tubing end. Those with *thick walls* are also known as tank ferrules; they have an extra-thick wall for welding to large structures and tanks.

Quick-clamp to hose adapters connect flexible hose or tubing to your system. Use a hose clamp (sold separately, see pages 274-280) to secure hose or tubing to these adapters.

Quick-clamp to grooved-ID adapters are also known as nonrecess ferrules and have a series of serrations on the interior. Connect by placing metal tubing inside the fitting and using an expansion tool to press the tubing into the fitting wall.

For information about selecting pipe size, see pages 2-3.

High-Polish Sanitary Stainless Steel Quick-Clamp Tube Fittings

(Continued from previous page)

- Maximum Pressure: Determined by clamp (see page 208)
- Temperature Range: Determined by gasket (see page 208)
- Tubing: Use with 4466K on page 144

Also known as tri-clamps, these fittings open easily by hand or wrench to allow quick access to your lines. These fittings are polished to a 32Ra finish on the OD and a 23Ra-32Ra finish on the ID. Use with water and air. The adapters below do not meet 3-A sanitary requirements and are not for use with dairy. They can be sterilized with steam (autoclaving). Not rated for vacuum.

Note: For a complete connection, you'll need a clamp, a gasket, and two fittings or adapters. Clamps, gaskets, and more fittings are shown on pages 208-209.

Sanitary Type 304 Stainless Steel Union Tube Fittings

- Max. Pressure @ 72° F: 400 psi
- Temp. Range: -30° to +200° F
- Tubing: Use with 4466K on page 144

How to Measure Tube OD

Measure the fitting behind the threads.

Also known as bevel seat fittings, these fittings permit easy access to your line. They have beveled ends that seal with a gasket and hex union nut—they'll maintain a leak-tight seal, even if the fittings are slightly misaligned. The fittings meet 3-A sanitary requirements; the gaskets do not. Use with dairy, water, and air. All are machined from Type 304 stainless steel bar stock. They're polished with to a 23Ra-32Ra finish on the OD and ID. They can be sterilized with chemicals. Not rated for vacuum.

The ***threaded adapters*** and ***hex union nuts*** have an Acme standard thread.

Note: For a complete connection, you'll need an unthreaded adapter, threaded adapter, hex union nut, and gasket.

Type 304L Stainless Steel Butt-Weld Tube Fittings

- Maximum Pressure: See below
- Temperature Range: −65° to +250° F
- Tubing: Use with seamless or welded Type 304 stainless steel (see pages 144-148)

Polished fittings are A 3

When you weld these fittings to tubing, you'll get flush joints that improve flow and reduce turbulence and contamination. All are made of Type 304L stainless steel tubing. They can be sterilized with steam (autoclaving) and chemicals. Vacuum rating is 10^{-6} torr (10^{-6} mm Hg) @ 72° F.

Polished Fittings— All meet 3-A sanitary requirements, except caps. Use with dairy, water, and air. They're polished with a 150 grit abrasive on the OD to a 32Ra finish and with a 180 grit abrasive on the ID to a 25Ra-32Ra finish.

Unpolished Fittings— Use with water and air.

Centered reducing couplings, which are also known as concentric reducers, allow you to connect one tube to another tube of a smaller diameter so that the centers align.

Off-center reducing couplings, which are also known as eccentric reducers, allow you to connect one tube to another tube of a smaller diameter so that the centers are offset. Use for horizontal flow.

Also Available: Type 316 stainless steel fittings. Please ask for 5237K1 and specify the corresponding polished or unpolished part number from the listing below.

Easy-Align Sanitary Type 304 Stainless Steel Tube Fittings

- Maximum Pressure: Determined by clamp (see below)
- Temp. Range: –30° to +200° F
- Tubing: Use with 4466K on page 144

How to Measure Tube OD

Measure the fitting behind the flange.

Tube OD

Also known as I-line fittings, the male and female ends interlock to provide a higher pressure rating than other quick-clamp fittings. After you butt-weld these fittings to your tubing, simply clamp the flanged ends together for a rigid "no-slip" connection. The fittings meet 3-A sanitary requirements; the clamps do not. Use with dairy and water. They can be sterilized with steam (autoclaving) and chemicals. Not rated for vacuum.

Clamps are cast from Type 304 stainless steel and have a Type 304 wing nut; they can be hand-tightened.

Adapters and ***caps*** are fabricated from Type 304 stainless steel tubing and are polished to a 32Ra finish on the OD and ID.

Note: For a complete connection, you'll need a clamp, a male adapter, a female adapter, and a gasket.

Clamps

Thin-Wall Type 316L Stainless Steel Socket-Weld Tube Fittings

- Maximum Pressure @ 65° F: 1500 psi
- Temp. Range: Not rated
- Tubing: Use with Types 304 and 316 welded stainless steel

Fabricated from thin-wall Type 316L stainless steel tubing, these fittings provide leak-free connections on thin-wall tubing. Insert your tubing into the socket ends of the fittings and weld for a permanent connection. Use with water, air, hydraulic fluid, and oil. Not rated for sterilization or vacuum.

Type 316 Stainless Steel Socket-Weld Tube Fittings

- Maximum Pressure @ 72° F: 4300 psi
- Temp. Range: –425° to +1200° F
- Tubing: Use with seamless or welded Types 304 and 316 stainless steel that meets ASTM A269

Create leak-free connections that withstand extreme pressures and temperatures. Insert your tubing into the socket ends of these fittings and weld for a permanent connection. All are machined from Type 316 stainless steel bar stock, except the elbows and tees, which are forged Type 316 stainless steel. Use with water, air, natural gas, and hydraulic oil. They meet ANSI B31.1.0 and B31.7. Not rated for sterilization or vacuum.

Pharmaceutical-Grade Type 316L Stainless Steel Tube Fittings

- Max. Pressure @ 72° F: 870 psi
- Temp. Range: Determined by gasket material (see page 208 for gaskets)
- Tubing: Use with 3334K on page 144

Also known as BPE fittings, these Type 316L stainless steel fittings are ultra-high polished to a mirror finish that meets ASME BPE (Bioprocessing Equipment Standard) requirements, unless indicated otherwise. They have a 20Ra finish on the ID and a 30Ra finish on the OD; this ultra-smooth surface makes them ideal for pharmaceutical applications. Also use with water, deionized water, air, and hydraulic oil. They can be sterilized with steam (autoclaving) and chemicals. Not rated for vacuum.

Clamps are not ultra-high polished or ASME BPE rated; tighten the wing nut by hand. ***Quick-clamp to pipe (threaded) adapters*** do not meet ASME BPE standards. ***Reducing couplings***, which are also known as concentric reducers, allow you to connect one tube to another tube of a smaller diameter so the centers align.

Note: A complete connection consists of a clamp, two fittings or adapters, and a gasket. Buna-N, fluoroelastomer, and PTFE gaskets are sold separately on page 208.

Also Available: Pharmaceutical-grade Type 316L stainless steel butt-weld fittings in the following ODs: 1/2", 3/4", 1", 1 1/2" and 2". Please ask for 4746K1 and specify the OD and shape: 90° elbow, tee, or butt-weld adapter.

For information about how to measure Quick-Clamp Tube Fittings, go to mcmaster.com and search for **4322KAC**.

Sanitary and FDA Compliant PVDF Tube Fittings

- Maximum Pressure @ 72° F: 150 psi, unless noted
- Temperature Range: Not rated

For information about how to assemble PVDF Tube Fittings, go to mcmaster.com and search for **5070KAC**.

Forgive us for bragging, but our high-purity PVDF (Kynar) fittings have earned the accolades—they're FDA CFR21 178.1520 and USDA compliant for use with food and beverage, NSF 61 certified for use with drinking (potable) water, plus they meet 3-A sanitary requirements for use with dairy. PVDF is opaque white; it is ideal in applications where metal cannot be used. Fittings can be sterilized with steam (autoclaving) and radiation. Not rated for vacuum.

Tighten ***clamps*** by hand, then use a spanner wrench to turn the nut a half-turn.

Note: For a complete connection, you'll need a clamp, two fittings or adapters, and a gasket. Buna-N, fluoroelastomer, and PTFE gaskets are sold separately on page 208.

Warning: PVDF fittings and pipe should never be used with compressed air or gas.

Also Available: Spanner wrench set. Please ask for 5070K1 and specify tube OD.

2"	2.516"	5070K33	22.29

Please Read Before Ordering: Pipe size (NPT) is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 2³⁄₁₆″, the next highest OD is 2⅜″ and the corresponding pipe size is 2″.

Threaded OD or ID	½″	2⅜″	3½″	4½″	5⅝″	6⅝″
Pipe Size (NPT)	¼″	2″	3″	4″	5″	6″

Ultra-High-Vacuum Tube Flanges

- Vacuum Rating @ 72° F: Flanges: 10^{-13} torr; Gaskets: Not rated
- Temperature Range: Flanges: –328° to +842° F; Gaskets: Not rated
- Tubing: Use seamless Types 304, 304L, 316, and 316L stainless steel

Also known as CF, Conflat, and UHV fittings. These flanges form a super-tight seal that will pull a vacuum to 10^{-13} torr. Flanges are made from unpolished Type 304 stainless steel. Weld these flanges onto your tubing. To make a connection, bolt two flanges of the same size together with a metal gasket (sold separately). Flanges meet ASTM A240, E45, and E112. Not rated for sterilization.

Fixed— These flanges have one-piece construction.

Easy Align— The outer ring rotates, so it is easier to match up the bolt holes with another flange.

Blind— Close off the end of tubing with these solid flanges.

Gaskets— Made of OFE (oxygen-free, electronic-grade) copper, they meet ASTM F68-77 and B152-179.

High-Vacuum Tube Fittings

- Vacuum Rating @ 72° F: 10^{-7} torr
- Temperature Range: –4° to +300° F
- Tubing: Types 304, 304L, 316, and 316L stainless steel

Also known as KF, QF, and NW fittings, these fittings have a unique center ring and flange connector that create a strong seal for high-vacuum applications. Use for air applications such as drying and leak testing, as well as applications where particles are suspended in a gas. All are Type 304 stainless steel, except the hose adapters and clamps are cast aluminum. Those with flanged ends meet ISO 2861. They can be sterilized with steam (autoclaving).

Reducing couplings are also known as concentric reducers.

Flange-end to hose adapters require the use of a hose clamp (see pages 274-280) to secure the hose.

Flange-end to pipe (threaded) adapters require PTFE tape (see page 3415) for sealing threaded ends.

Clamps can be hand-tightened.

Rings have fluoroelastomer O-rings. *Vacuum rings* have a stainless steel centering ring. *Pressure and vacuum rings* have a stainless steel centering ring and an aluminum outer ring. *Note:* See the table for pressure ratings.

Note: For a complete connection, you'll need two fittings or adapters, a ring, and a clamp.

Vacuum Tube Fittings

- Maximum Pressure @ 72° F: 15 psi
- Vacuum Rating @ 72° F: 15" Hg
- Temperature Range: −10° to +180° F
- Tubing: Use 3094K carbon steel or 4935K galvanized steel (see page 152)

Build an air vacuum system without welding or brazing—simply butt two fittings or adapters together and secure with a compression coupling. Wall thickness is 0.065" (16 ga) for all, except the fittings and adapters for 5" and 6" ODs have a wall thickness of 0.083" (14 ga). Not rated for sterilization.

Compression couplings are galvanized steel.

Capped connectors are cast zinc with a zinc-plated steel lid.

Elbows, ***wyes***, ***reducing couplings***, and ***adapters*** come in your choice of carbon steel or corrosion-resistant galvanized steel. **To Order:** Please specify carbon steel or galvanized steel. The prices listed below are for galvanized steel; prices for the carbon steel are approximately 20% lower.

Tube-to-Tube Connectors

1 1/2"	2"	4935K152 $20.20
2"	2"	4935K154 23.40

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	3″

Solder-Joint Copper Tube Fittings for Drinking (Potable) Water

- Maximum Pressure @ 100° F (when used with 95/5 Solder): 1/4″-1″ Tube Size: 500 psi; 1 1/4″-2″ Tube Size: 400 psi; 2 1/2″- 3″ Tube Size: 300 psi
- Temperature Range: 32° to 200° F
- Tubing: Use copper tubing for drinking water (see 5175K and 50475K on page 154)

Copper tube fittings consist of two different connection types: tube-end (male) and socket-end (female). The tube-end of a fitting or the end of a copper tube is inserted into the socket-end of a fitting then soldered together.

Also known as sweat fittings, solder these fittings together for a permanent, leak-tight connection. These products are NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010. They also meet ANSI B16.22 and MSS-SP104. They're made from seamless wrot-copper tubing; the wrot describes the 99.9% pure copper of these fittings. They can be sterilized with trisodium phosphate (TSP) in water. Not rated for vacuum. Materials and threads are compatible with the bronze fittings on page 218. To join these fittings to malleable iron or steel, see unions on page 62.

Unions are wrot copper with a brass nut.

Couplings with center stop have a small bump that prevents the tubing from sliding all the way through the coupling.

Caps have a socket (female) end to seal the end of tubing.

Dissolvable plugs temporarily block the flow in your tubing system to keep moisture away from an area that's being soldered.

Socket-End (Female) to Socket-End (Female)

▲ *Tube size is the accepted designation of the copper tubing industry, not the actual OD.*

Please Read Before Ordering: Pipe size (NPT) is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded Fitting OD or ID	1/2″	3/4″	1″	1 3/8″
Pipe Size (NPT)	1/4″	1/2″	3/4″	1″

Cleaned and Bagged Solder-Joint Copper Tube Fittings

- Maximum Pressure @ 100° F (when used with 95/5 Solder): 500 psi
- Temperature Range: 32° to 200° F
- Tubing: Use with copper tubing for drinking water (see 5175K and 50475K on page 154)

Don't let dirt and moisture contaminate the inside of your tubing line—these fittings come cleaned and bagged, so they stay spotless. Also known as sweat fittings, these fittings solder together for a permanent, leak-tight connection. These products are NSF 61 certified for use with drinking (potable) water in all states as of January 1, 2010. They also meet ANSI B16.22 and MSS-SP104. They're made from seamless wrot-copper tubing. They can be sterilized with trisodium phosphate (TSP) in water. Not rated for vacuum.

Couplings with center stop have a small bump that prevents the tubing from sliding all the way through the coupling.

Socket-End (Female) to Socket-End (Female)

Tube Size▲	Actual Tube OD	90° Elbows	Each	Tees	Each	Couplings with Center Stop	Each
1/4″	3/8″	5135K77	$2.39	5135K79	$6.04	5135K89	$0.63

1″	1 1/8″	1″	5135K13	8.18	5135K23	8.36

Solder-Joint Cast Bronze Tube Fittings

- Maximum Pressure @ 100° F (when used with 95/5 Solder): Elbows: 500 psi; Flanges: 400 psi; Unions and Reducer: 300 psi
- Temperature Range: 32° to 200° F
- Tubing: Use with copper tubing (see 5175K, 50475K, and 5174K on page 154)

Made of cast bronze, but also known as cast copper, these fittings provide much higher pressure ratings than wrot-copper. Use with water. Fittings can be sterilized with trisodium phosphate (TSP). Not rated for vacuum.

90° elbows meet ASTM B584 and ASME B16.18.

Flanges meet ASME B16.24. Bolt two same-size flanges together with a gasket to create easy access to your tubing system.

Unions meet ASME B16.18.

Metric Solder-Joint Copper Tube Fittings

- Maximum Pressure @ 86° F (when used with 95/5 Solder): 362 psi
- Temperature Range: 32° to 200° F
- Tubing: Use with 9935K metric copper tubing (see page 155)

Sized for metric applications, solder these fittings together for a permanent, leak-tight connection. Also known as sweat fittings, these fittings are made of seamless wrot-copper tubing. Use with water, air, oil, and hydraulic fluid. They can be sterilized with steam (autoclaving). Not rated for vacuum.

Couplings with center stop have a small bump that prevents the tubing from sliding all the way through the coupling.

Caps have a socket (female) end. Use them to seal the ends of your tubing.

Socket-End (Female) to Socket-End (Female)

▲Tube size is the accepted designation of the copper tubing industry, not the actual OD.

For information about selecting pipe size, see pages 2-3.

CPVC Tube Fittings and Tubing for Drinking (Potable) Water

- Maximum Pressure: Fittings: 100 psi @ 180° F; Tubing: 400 psi @ 72° F
- Temperature Range: 40° to 180° F
- Tubing: See table

These CPVC fittings and tubing are sized the same as wrot copper, but they're less expensive, lighter weight, and easier to install. No solder needed; they connect with CPVC cement (sold separately on page 94). They meet NSF 61 for use with drinking (potable) water, as well as ASTM D2846, National Standard Plumbing Code, and Uniform Plumbing Code. Not rated for sterilization or vacuum.

Warning: Never use CPVC fittings and tubing with compressed air or gas.

Socket-End (Female) to Socket-End (Female)

Flexible PVC Tube Fittings

- Maximum Pressure: See table
- Temperature Range: 0° to 165° F
- Tubing: Use with metal or rigid plastic
- Hose clamps are required (see page 274)

In addition to being soft and shock absorbent, these PVC fittings also withstand vibration. Use them in place of rigid fittings when your application requires flexibility. They meet NSF 61 for use with drinking (potable) water, 3-A sanitary requirements for use with dairy, and they're FDA compliant for use with food and beverage. Fittings can be sterilized with steam (autoclaving). Not rated for vacuum.

90° elbows are clear; ***wyes*** are opaque blue.

For Tube OD	90° Elbows Max. psi @ 68° F		Each	Wyes Max. psi @ 68° F		Each
3/8″	66	5074K11	$7.50	80	5074K41	$15.96

Clear and Smooth Glass Tube Fittings

- Max. Pressure @ 72° F: 3/4″ and 1″: 100 psi; 2″: 75 psi
- Temperature Range: –40° to 450° F
- Tubing: See table

For fittings that will stand up to chemicals, the choice is crystal clear. These durable borosilicate-glass fittings are for use in chemical applications such as acetic, hydrochloric, and sulfuric acids. Plus, these fittings have thick walls with a super-smooth surface that allows you to see what's flowing through your line. They can be sterilized with steam (autoclaving), chemicals, gas, and irradiation. Not rated for vacuum.

Adapters and ***clamps*** are made of Type 304 stainless steel; the clamps have a fluoroelastomer liner and a TFE seal ring gasket.

▲ ***Tube size is the accepted designation of the tubing industry, not the actual OD.***

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown at left. Then, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 5/16″, the next highest ID or OD is 3/8″ and the corresponding pipe size is 1/8″.

Threaded ID or OD	3/8″	1/2″	5/8″	3/4″
Pipe Size	1/8″	1/4″	3/8″	1/2″

Manifolds

Outlets on One Side, Standard

Outlets on Two Sides, Extra-Wide Space

Keep your air and liquid lines organized by creating a "distribution center" with these manifolds. Also known as headers, just thread in your tube fittings using the configuration that best suits your needs, and you'll have multiple outlets from one incoming supply source. All have two inlets (one at each end) and four mounting holes that allow you to mount them from either the top or side. Not rated for sterilization or vacuum. Connections are NPT.

Manifolds with ***outlets on two sides*** have two rows of outlets set at a 90° angle.

Extra-wide-space manifolds have more room between holes to give you the space you need for multiple valves or gauges.

Plugs (sold separately on the next page) close off any inlet or outlet holes that are not in use.

Also Available: Aluminum manifolds with BSPT (British Standard Pipe Taper) and BSPP (British Standard Pipe Parallel) threads. All have a plain finish. Please ask for 4750K1 and specify thread type (BSPP or BSPT), number of outlets (2, 4, 6, 8, or 10), and the inlet pipe size (1/4″, 3/8″, or 1/2″).

	Maximum Pressure @ 72° F	Temperature Range	Corrosion Resistance	Chemical Resistance	Durability	For Use With

Straight-Thread Aluminum Manifolds

- Maximum Pressure @ 72° F: Air and Water: 1000 psi; Nonshock Hydraulics: 3000 psi
- Temperature Range: −50° to +200° F

Designed for hydraulic oil systems, these manifolds accept SAE-UNF Class 2B straight-thread fittings. Also known as headers, just thread in your tube fittings and you'll have multiple outlets from one incoming supply source.

Manifolds are machined from Alloy 6061 aluminum bar stock, which has good corrosion and chemical resistance and good durability. All have a row of outlets on one side. They have two inlets (one at each end) and 17/64″ mounting holes that allow you to mount them from either the top or side. Not rated for sterilization or vacuum.

The inlets and the outlets have female SAE-UNF Class 2B straight threads. *Note:* SAE-UNF sizes are actual sizes and not compatible with NPT threads.

Also Available: Aluminum manifolds with 1/8″ NPT threaded inlets and 10-32 threaded outlets. Please ask for 5092K1 and specify number of outlets (3, 4, 5, 6, 8, or 10).

Three-Way Aluminum Manifolds for Air

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: −40° to +360° F

Distribute air to three locations from a single source. These manifolds have one inlet and a round head with three outlets—an ideal shape when space is tight. They are machined from aluminum bar stock, which has fair corrosion and chemical resistance and good durability. Sterilize with steam (autoclaving). Not rated for vacuum. The inlet and outlet connections are female NPT.

No. of Outlets	Pipe Size Inlet	Pipe Size Outlet	Overall Size, Dia.×Lg.	Outlets, Ctr.-to-Ctr.	Each
3	1/4″	1/4″	1 5/8″×1 1/2″	1″	5465K71 $8.91

3	1/2″	1/4″	1 5/8″×1 1/2″	1″	5465K73 9.14

Miniature Hex Shape Brass Manifold

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: −60° to +300° F

Distribute air, water, and hydraulic oil from a single source to as many as 12 locations with this manifold. Also known as a header, this manifold has four outlets on three of its sides. It is machined from Alloy 360 brass, which has good corrosion and chemical resistance and good durability. This manifold has two inlets (one at each end) and a 13/64″ mounting hole. Use plugs (sold separately, see 5454K81 on pg. 42) to close off any inlet or outlet holes that are not in use. Not rated for sterilization or vacuum. The inlets have NPT threads; the outlets have female UNF straight threads.

No. of Outlets	Inlet, Pipe Size	Outlet, Thread Size	Overall Size, Lg.×Wd.×Ht.	Outlets, Ctr.-to-Ctr.	Each
12	1/8″-27	10-32	2 7/8″×9/16″×5/8″	1/2″	5454K97 $8.56

Multiline Aluminum Blocks

- Max. Pressure @ 72° F: Air and Water: 1000 psi; Nonshock Hydraulics: 3000 psi
- Temp. Range: −10° to +200° F

Organize multiple lines within an air or fluid system. Also known as junction blocks, these do not have inlets like a manifold—instead they simply have threaded ports that hold your lines in place for a neat, orderly appearance. Blocks are machined from Alloy 6061 aluminum bar stock with a black anodized finish, which has good corrosion and chemical resistance and good durability. They have 13/64″ mounting holes that allow you to secure them from either the top or side. Not rated for sterilization. Vacuum rating is 29.9″ Hg @ 72° F. Connections are female NPT, except 10-32 are female UNF straight threads.

Air flows straight through the block.

About Duct Hose

While duct hose is commonly used to blow or exhaust air and fumes, variations in construction also allow some duct hose to transport media such as dust, chips, shavings, and liquids. Our duct hose is organized by application, as described below:

Duct for Air— For use with air.

Duct for Fumes— Ideal for use with smoke and fumes, as well as air.

Duct for Dust— While all duct hose in this classification is for use with dust, some will stand up to more specific dust, such as grinding dust, wood sawdust, and lint (see individual presentations for specific applications). Also use with air and smoke.

Duct for Chips and Shavings— All duct hose in this classification is for use with wood chips and corrugated fibers; however, some will stand up to metal shavings, plastic pellets, and powders (see individual presentations for specific applications). Also use with air and dust.

Duct for Liquids— While all duct hose in this classification is for use with water, some will stand up to other liquids (see individual presentations for specific applications). Also use with air, smoke, and dust.

Connection— A hose clamp or U-bolt is required to secure the duct hose; see pages 274-278 and 282 for hose clamps and pages 1534-1537 for U-bolts. To connect two lengths of hose, see page 239 for a hose connector.

Bend Radius— Measured from the center point to the inside edge of the hose, this is the minimum radius you can bend hose without damaging it or shortening its life. The smaller the measurement, the greater the flexibility.

Flexibility— While bend radius is an approximate guide for hose flexibility, we have also rated flexibility in general terms. *Very Flexible*—Similar to rope, this hose can easily loop without restricting flow. *Flexible*—Bends without a lot of effort. *Rigid*—Very stiff and difficult to bend.

Compressibility— Expressed as a percentage of the extended length, the higher the percentage, the more compressible the hose. For example, if a 10-ft. hose compresses 75% of its extended length, the duct can compress to 2½ feet. *Note*: Hose lengths given in each presentation are the extended length, unless noted otherwise.

Vacuum Rating— Vacuum, or negative pressure, is measured in inches of mercury (Hg). The larger the number, the higher the vacuum. As a general guide: *Low* = 1″ to 24″ Hg; *Medium* = 25″ to 27″ Hg; *High or Full* = 28″ to 29.9″ Hg.

Blo-N-Vent Duct for Air

Hose with Finished Ends and Wear Strip

- Use with air
- Very flexible
- Temperature Range: –65° to +250° F
- Color: Yellow; wear strip is black
- Clamps: Use worm-drive clamps (see pages 274-278)

The perfect choice for general-purpose blowing and venting applications, this single-ply hose is lightweight and very flexible. It's made from 0.016″ thick, neoprene-coated polyester with a fabric-enclosed steel wire support. Hose with a 4″ ID compresses to 80% of its length; all other sizes compress to 92%. Meets UL 94V0 for flammability. Not rated for vacuum. Can be used indoors and out.

Hose with Wear Strip— The wear strip protects hose from damage caused by dragging.

Hose with Finished Ends and Wear Strip— In addition to having a wear strip, both ends of this hose have finished ends with galvanized wire rope sewn in. The finished ends allow you to connect hose for longer lengths; just squeeze the end on one hose and slip it into the end of the other hose. The finished ends also aid in connecting hose to equipment.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Choose-a-Color Duct for Air

Hose with Finished Ends

- Use with air
- Very flexible
- Temperature Range: –20° to +180° F
- Color: Black, blue, red, or white; wear strip is black
- Clamps: Use worm-drive clamps (see pages 274-278)

With a choice of four colors, you can use this hose to identify different air systems within your plant. This single-ply, lightweight hose is made from 0.014″ thick, PVC-coated polyester with a fabric-enclosed steel wire support. It has a wear strip. Hose compresses 90% of its length. Meets UL 94V0 for flammability. Can be used indoors and out.

Hose— **To Order:** Please order in 5-ft. increments up to the full coil length of 25 ft. and specify color: black, blue, red, or white.

Hose with Finished Ends— Installation is easier because the finished ends have no wire support or wear strip to get in your way. **To Order:** Please specify color: black, blue, red, or white.

For information about duct hose, see page 222.

Quick-Attach Duct for Air

- Use with air
- Very flexible
- Temperature Range: –20° to +180° F
- Color: Black, blue, white, or yellow; wear strip is black

Eliminate the need for hose fittings and clamps—this lightweight, single-ply hose has belt-and-buckle end connectors for quick and easy attachment. Hose is made from 0.014″ thick, PVC-coated polyester with a fabric-enclosed steel wire support. It has a wear strip. Hose compresses 90% of its length. Hose meets UL 94V0 and is manufactured with materials that meet NFPA (National Fire Protection Association) 701 standards for flammability. Can be used indoors and out.

To Order: Please specify color: black, blue, white, or yellow.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F	5-ft. Length	Each	10-ft. Length	Each	15-ft. Length	Each	25-ft. Length	Each

Super-Compressible Duct for Air

- Use with air
- Very flexible
- Temperature Range: –20° to +140° F
- Color: Silver
- Clamps: Use worm-drive clamps (see pages 274-278)

Hose

Coupling

Capable of compressing 96% of its length, this hose collapses from its full 25-ft. length down to 1 ft. for easy storage. Hose is made from 0.005″ thick, double-ply metalized polyester with a fabric-enclosed steel wire support. Hose meets UL 181 Class 1 and NFPA (National Fire Protection Association) 90A and 90B standards. Not rated for pressure or vacuum. For indoor use.

Couplings slide inside the hose to connect lengths of hose. They are made from 26-ga. riveted galvanized steel. The coupling OD is equal to the hose ID. They are 5 3/8″ long, except 55275K31 is 3″ long and 55275K37 and K41 are 6″ long. The material meets ASTM A653-07-CS Type B.

Hose (25-ft. Length) ID	OD	Bend Radius		Each	Couplings	Each
3″	3 1/8″	3″	55275K11	$21.31	55275K31	$1.72

Bend-and-Stay Duct for Air

- Use with air
- Very flexible
- Temperature Range: –100° to +435° F
- Clamps: Use worm-drive clamps (see pages 274-278)

Bend this hose over and over again—it maintains its shape and will support itself once positioned. Hose is made from 0.004″ thick aluminum with lock-seam construction. One end of the hose is crimped; insert the crimped end into another piece to make longer lengths. (*Note*: Hose may need support to maintain its shape once the length extends past 6 ft.) Not rated for pressure or vacuum. For indoor use.

Hose ID	Hose OD	Bend Radius	Length Compressed	Length Extended		Each
3″	3 1/4″	1 1/2″	26″	7 ft.	55335K41	$5.40
4″	4 1/4″	2″	26″	7 ft.	55335K42	7.75
5″	5 1/4″	2 1/2″	26″	6 1/2 ft.	55335K43	9.77
6″	6 1/4″	3″	26″	6 1/2 ft.	55335K44	12.83

9″	9 1/4″	4 1/2″	24″	6 ft.	55335K47	21.17
10″	10 1/4″	5″	24″	6 ft.	55335K48	22.75
12″	12 1/4″	6″	24″	6 ft.	55335K49	34.83
14″	14 1/4″	7″	24″	6 ft.	55335K51	44.75

Crush-Resistant Duct for Air

- Use with air
- Flexible
- Temperature Range: –40° to +225° F
- Color: Blue
- Clamps: Use worm-drive clamps (see pages 274-278)

Go ahead and step on this hose—it will bounce right back. This highly crush-resistant hose is made from single-ply polypropylene with an exposed polypropylene internal support. Material for the 3″ to 5″ ID hose is 0.011″ thick; 6″ to 8″ ID hose is 0.014″ thick. Hose compresses 50% of its length. Not rated for vacuum. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil
3″	3 11/32″	4 1/2″	8	5152K11	$4.11	$3.20

6″	6 7/16″	5 1/2″	7	5152K14	10.40	8.09
7″	7 1/2″	5 3/4″	8	5152K15	11.74	9.13
8″	8 1/2″	6 3/4″	4	5152K16	13.34	10.38

Disposable Clear Duct for Air

- Use with air
- Very flexible
- Temperature Range: 32° to 120° F
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 274-278)

Designed for blowing applications only, this economical hose can be thrown away when your job is complete. Hose is made from ultra-thin, 0.004″ thick polyethylene. Because it is so light, it's not rated for bend radius—you can bend it any way you want, even tie it in a knot. Not rated for pressure or vacuum. For indoor use.

To Order: Please specify length from the choices below.

Hose ID	Lay-Flat Width	Available Lengths		Per Ft.
4 7/16″	7″	25 ft., 100 ft.	1289T11	$0.18
6 7/16″	10″	25 ft., 100 ft.	1289T12	.21
8 5/16″	13″	25 ft., 100 ft.	1289T13	.33
10 1/2″	16 1/2″	25 ft., 50 ft., 100 ft.	1289T14	.43
12 3/4″	20″	25 ft., 50 ft., 100 ft.	1289T15	.52
15 5/16″	24″	25 ft., 50 ft., 100 ft.	1289T16	.56
16 1/4″	25 1/2″	25 ft., 50 ft., 100 ft.	1289T17	.50
18 1/2″	29″	25 ft., 50 ft., 100 ft.	1289T18	.56
20 7/16″	32″	25 ft., 50 ft., 100 ft.	1289T19	.80

For information about duct hose, see page 222.

Insulated Duct for Air

With Silver Cover

- Use with air
- Very flexible
- Temperature Range:
  Black Cover: –20° to +200° F
  Silver Cover: –20° to +250° F
- Color: Black or silver
- Clamps: Use worm-drive clamps (see pages 274-278)

Great for heating and cooling (HVAC) applications, this lightweight hose is thermally insulated with a 1⅛″ thick fiberglass blanket. It also has a steel wire support. You can easily cut this hose to the length you need with a utility knife or pair of scissors. Hose meets UL 181 Class 1 and NFPA (National Fire Protection Association) 90A and 90B standards. Hose is not rated for compression, pressure, or vacuum. For indoor use.

The ***black cover*** is made from 0.003″ thick polyethylene. Hose has a velocity rating of 5000 fpm.

The ***silver cover*** is 0.005″ thick metalized material. Hose has a velocity rating of 6000 fpm.

Hose ID	Hose OD	Bend Radius	WITH BLACK COVER 25-ft. Length	Each	WITH SILVER COVER 25-ft. Length	Each
4″	6″	4″	5514K34	$60.07	55315K71	$70.69
5″	7″	5″	5514K35	64.17	55315K65	76.74

16″	18″	16″	5514K46	173.94	55315K77	207.09

High-Temperature Duct for Air

- Use with air
- Very flexible
- Temperature Range:
  –20° to +325° F
- Color: Yellow;
  wear strip is black
- Clamps: Use worm-drive clamps (see pages 274-278)

An acrylic coating gives this 0.016″ thick, single-ply polyester hose a higher temperature rating than other hose for air. Hose has a fabric-enclosed steel wire support and a wear strip. Hose compresses 90% of its length. Meets UL 94V0 for flammability. Not rated for vacuum. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil
4″	4 5/16″	3″	6	6664T11	$11.06	$9.49

14″	14 9/16″	8 1/2″	1.2	6664T16	34.20	29.31

Heat-Reflective/High-Temperature Duct for Air

- Use with air
- Flexible
- Temperature Range:
  –65° to +625° F
- Color: Silver
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

A heat-reflective metalized film deflects heat from the exterior of this lightweight double-ply hose. Hose is made from 0.065″ thick, silicone-coated fiberglass with a fabric-enclosed steel wire support. Hose with a 1″ to 2″ ID compresses 67% of its length; 3″ to 6″ ID compresses 75% of its length. Can be used indoors and out.

To Order: Please order hose in 1-ft. increments up to the full coil length of 12 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Blo-R-Vac Duct for Fumes

Clear

- Ideal for smoke and propane fumes, as well as air; blue hose is also for weld fumes
- Very flexible
- Temperature Range:
  20° to 160° F
- Color: Blue or clear
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

Very flexible yet rugged, this hose is the perfect choice for venting smoke and propane fumes. Hose is made from 0.020″ thick PVC with a steel wire support. Hose with a 1¼″ to 2″ ID compresses 50% of its length; 2½″ to 3″ ID compresses 67% of its length; 4″ to 16″ ID compresses 80% of its length. Can be used indoors and out.

Blue hose meets UL 94V0 for flammability. ***Clear*** hose allows you to see the flow.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. for the 1¼″ to 8″ ID hose; up to 25 ft. for the 10″ to 16″ ID hose.

For information about duct hose, see page 222.

Super-Flexible Duct for Fumes

- Ideal for smoke, paint fumes, and weld fumes; also for air
- Very flexible
- Temperature Range: –20° to +150° F
- Color: Blue
- Clamps: Use worm-drive clamps (see pages 274-278)

Extremely lightweight, this is the most flexible hose for fumes we offer. Hose is made from 0.018″ thick PVC with an enclosed steel wire support. Hose compresses 30% of its length. Meets UL 94HB for flammability. Hose is not rated for pressure or vacuum. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft.

Hose ID	Hose OD	Bend Radius		Per Ft. Partial Coil	Per Ft. Full Coil
1″	1 1/8″	1/8″	5488K53	$2.26	$1.85
1 1/4″	1 7/16″	1/4″	5488K55	2.39	1.96
1 1/2″	1 11/16″	1/4″	5488K56	2.54	2.07
1 3/4″	1 15/16″	1/4″	5488K57	2.67	2.19
2″	2 3/16″	1/4″	5488K58	2.98	2.44
3″	3 7/32″	3/8″	5488K61	4.62	3.78
4″	4 7/32″	1/2″	5488K63	6.96	5.70
5″	5 7/32″	5/8″	5488K64	8.42	6.89
6″	6 1/4″	3/4″	5488K66	9.22	7.54

Clear Duct for Fumes with Wear Strip

- Ideal for smoke and paint fumes; also for air
- Flexible
- Temperature Range: –13° to +140° F
- Color: Clear; wear strip is black
- Clamps: Use twin-ring hose clamps (see page 282)

The clear construction allows you to see what's going through the inside while a wear strip protects the outside from damage due to dragging. Hose is made from PVC; material thickness is 0.035″ for the 2 1/2″ ID hose; 0.039″ for the 3″ and 4″ ID hose; and 0.047″ for the 5″ to 8″ ID hose. Hose compression is not recommended. Not rated for vacuum. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 100 ft. for 2 1/2″ to 7″ ID hose; 50 ft. for 8″ ID hose.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil
2 1/2″	2 13/16″	2 1/2″	6	5348K31	$3.17	$2.54

6″	6 1/2″	6″	3	5348K35	9.57	7.66
7″	7 1/2″	7″	2	5348K36	11.39	9.11
8″	8 1/2″	8″	2	5348K37	12.81	10.24

Adjustable-Diameter Duct for Fumes

- Ideal for smoke and paint fumes; also for air
- Rigid
- Temperature Range: –10° to +150° F
- Color: Gray
- Clamps: Use worm-drive clamps (see pages 274-278)

Increase or decrease the inside diameter by 25% with a two-handed twist. Hose is made from 0.187″ thick PVC and it will retain its shape after bending. To connect lengths of hose, just interlock two ends together—no clamps or couplers required. Not rated for compression. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft. for the 2″ to 6″ ID hose; 10 ft. for the 8″ ID hose.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil
2″	2 1/4″	5 1/2″	2.5	6″ Hg	5257K15	$10.69	$8.31

Economical Duct for Fumes

- Ideal for smoke, paint fumes, and weld fumes; also for air
- Very flexible
- Temperature Range: –20° to +200° F
- Color: Gray
- Clamps: Use worm-drive clamps (see pages 274-278)

This lightweight hose is an economical choice for your venting applications. Made from single-ply, 0.005″ thick, PVC-coated fiberglass with an exposed steel wire support. Hose compresses 78% for 2″ ID hose; 83% for 3″ to 6″ ID hose; 92% for 7″ to 14″ ID hose. Meets UL 94V0 for flammability. For indoor use.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Bend-and-Stay Metal Duct for Fumes

- Ideal for smoke and paint fumes; also for air
- Flexible
- Temperature Range: Aluminum: –100° to +400° F Type 304 SS: –400° to +800° F
- Clamps: Use duct hose connectors (see page 239)

Bend this crimped-seam metal hose into position and it holds its shape. Not for continuous flexing. Hose is not rated for compression, pressure, or vacuum. Can be used indoors and out.

***Aluminum*—**Lighter in weight than stainless steel with good corrosion resistance. Material thickness is 0.008″.

***Type 304 Stainless Steel*—**More durable than aluminum with excellent corrosion resistance. Material thickness is 0.005″.

Duct Hose

For information about duct hose, see page 222.

Duct for Fumes with PVC Support

- Ideal for smoke and paint fumes; also for air
- Flexible
- Temperature Range: 0° to 150° F
- Color: Green
- Clamps: Use worm-drive clamps (see pages 274-278)

Unlike hose that's supported with steel wire, this hose has an enclosed PVC support that will not rust. Hose is made from PVC. Material thickness is 0.036″ for the 1″ ID hose; 0.04″ for the 1¼″ and 1½″ ID hose; 0.048″ for the 2″ to 6″ ID hose; and 0.064″ for the 8″ ID hose. Hose compresses 80% of its length. Not rated for pressure. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 100 ft. for the 1″ to 4″ ID hose; 30 ft. for the 6″ ID hose; 20 ft. for the 8″ ID hose.

Hose ID	Hose OD	Bend Radius	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Retracting Duct for Fumes

- Ideal for smoke and paint fumes; also for air
- Very flexible
- Temp. Range: –40° to +250° F
- Color: Yellow; wear strip is black
- Clamps: Use worm-drive clamps (see pages 274-278)

This lightweight single-ply hose extends for installation, then springs right back when released. It is made from 0.016″ thick neoprene-coated polyester with a bronze-coated steel wire support. It has a wear strip. Hose compresses 80% of its length. Meets UL 94V0 for flammability. Hose is not rated for vacuum. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil
3″	3 3/8″	2½″	14	5421K16	$5.92	$4.85

High-Temperature/Flexible Duct for Fumes

- Ideal for smoke and paint fumes, as well as air; neoprene-coated hose is also for weld fumes
- Flexible
- Temperature Range: Neoprene Coated: –65° to +300° F; Silicone Coated: –75° to +500° F
- Color: Neoprene Coated: Black; Silicone Coated: Red
- Clamps: Use worm-drive clamps (see pages 274-278)

A flexible alternative to metal hose, this double-ply fiberglass hose stands up to high-temperature applications. Hose is made from 0.023″ thick fiberglass with an enclosed bronze-coated steel wire support. Can be used indoors and out.

Neoprene-coated hose meets UL 94V0 for flammability.

Silicone-coated hose handles a wider temperature range than neoprene-coated hose.

Hose—Full coil length is 25 ft. **To Order:** Please order hose in 5-ft. increments up to the full coil length.

Hose with Finished Ends—For easier installation, the ends are neatly cuffed with no wire support.

For information about duct hose, see page 222.

High-Temperature Metal Duct for Fumes

- Ideal for smoke, paint fumes, and weld fumes; also for air
- Rigid
- Maximum Temperature: Galvanized Steel: 550° F; Aluminum: 450° F; Types 304 and 316 Stainless Steels: 1000° F
- Clamp Type: Use U-bolt clamps (see page 1534)

All-metal interlocked strips create a durable hose that is not air tight but can take the heat. Hose is not rated for compression, pressure, or vacuum. Can be used indoors and out, except the galvanized steel hose is for indoor use only.

Galvanized Steel— An economical choice with fair corrosion resistance. *Extra-heavy weight* hose has Type 304 stainless steel packing for added strength and better sealing.

Aluminum— Lighter in weight than galvanized steel and stainless steel with good corrosion resistance.

Type 304 Stainless Steel— Very good corrosion resistance.

Type 316 Stainless Steel— Excellent corrosion resistance.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Also Available: Pressure-rated Type 304 stainless steel duct hose that's 0.018″ thick. Pressure rating is 25 psi @ 72° F. Comes in the following IDs: 2½″, 3″, 4″, 5″, or 6″. Please ask for 5592K1 and specify hose ID and hose length in 5 ft. increments up to the full coil length of 25 ft.

For information about duct hose, see page 222.

Extreme-Temperature Duct for Fumes

- Ideal for smoke and paint fumes; also for air
- Flexible
- Temperature Range: –200° to +1000° F
- Color: Silver/Gray
- Clamps: See below

Get the best of both worlds—this single-ply hose stands up to extreme temperatures like all-metal hose, yet is more flexible like fabric hose. Hose is made from 0.02″ thick, alumina-coated glass fabric with fine stainless steel wire woven in. It has an external galvanized steel wire support that acts as a wear strip. Hose compresses 75% of its length for 3″ and 4″ ID hose, 67% for 6″ to 14″ ID hose. Can be used indoors and out.

Hose—To Order: Please order in 1-ft. increments up to the full coil length of 25 ft.
Clamps— Made from Type 304 stainless steel.

Connector

- Ideal for carbon monoxide vapors
- Flexible
- Temperature Range: –40° to +400° F
- Color: Black
- Clamps: See connectors and adapters below

Hose

Ideal for garage environments, you can drive over this hose and it will bounce back to shape. Made from 0.156″ thick EPDM rubber, use this hose to carry carbon monoxide exhaust fumes to underground, overhead, and through-the-door outlets. Hose is not rated for compression, pressure, or vacuum. Can be used indoors and out.

Note: Hose and accessories are for use only with motor idling.

2″ to 4″ ID hose has one straight end and one flared end. To make longer lengths, "screw" the straight end of one hose into the flared end of another hose with the same ID—no need for tools or connectors.

5″ and 6″ ID hose has two straight ends. To make longer lengths, use connectors (sold separately at right).

Straight End ID	Straight End OD	Flared End ID	Flared End OD	Bend Radius	11-ft. Length	Each

6″	7″	—	—	4″	5398K18	294.99

Accessories

Y adapters let you vent two exhausts through one outlet. ***Universal adapters*** connect to tailpipes with a 4″ or smaller OD. ***Oval adapters*** are for vehicles with oval and/or twin-tip exhaust pipes (5398K51 for 2 1/2″ × 5 1/2″ oval tailpipes and twin tailpipes up to 2 1/2″ dia. each; 5398K52 for 3″ × 8″ oval tailpipes and twin tailpipes up to 3″ dia. each). ***Door ports*** allow you to vent hose through a door. ***Diesel adapters*** connect a hose to diesel exhaust pipes (up to 5 1/2″) for overhead and underground exhaust systems. ***Connectors*** splice sections of 5″ or 6″ ID hose.

	For Hose ID	Material		Each

Highly Compressible Duct for Fumes

- Ideal for smoke and paint fumes; also for air
- Very flexible
- Temp. Range: –65° to +550° F
- Color: Orange
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

Lightweight and flexible, this single-ply hose is highly compressible. Made from 0.016″ thick, silicone-coated fiberglass, it has a fabric-enclosed steel wire support. Hose compresses 80% of its length for 2″ to 3″ ID hose; 85% for 4″ to 12″ ID hose. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Compressible Duct for Corrosive Fumes

- Ideal for smoke, paint fumes, butyl acetate fumes, and nitric acid fumes; also for air
- Flexible
- Temperature Range: –65° to +500° F
- Color: Gray
- Clamps: Use worm-drive clamps (see pages 274-278)

Corrosive fumes are no problem for this single-ply hose—it's made from 0.016″ thick PTFE-coated fiberglass. Hose has an external Type 304 stainless steel wire support that acts as a wear strip. Hose compresses 75% of its length. Can be used indoors and out.

To Order: Please order hose in 1-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

For information about duct hose, see page 222.

Duct for Corrosive Fumes

- Ideal for smoke, paint fumes, hydrochloric acid fumes, and toluene fumes; also for air
- Flexible
- Temperature Range: –75° to +400° F
- Color: Orange
- Clamps: Use worm-drive clamps (see pages 274-278)

A nonstick PTFE (polytetrafluoroethylene) liner gives this double-ply hose the ability to handle corrosive fumes. Hose is made from 0.028″ thick silicone-coated fiberglass with an enclosed steel wire support. Not rated for compression. Can be used indoors and out.

Note: This hose is recommended for straight runs or gradual bends only. The liner may separate with overbending.

Hose— Full coil length is 12 ft. **To Order:** Please order in 1-ft. increments up to the full coil length.

Hose with Finished Ends— For easier installation, the ends are neatly cuffed with no wire support.

Highly Compressible Clear Duct for Corrosive Fumes

- Ideal for smoke, paint fumes, sodium hydroxide fumes, and sulfuric acid fumes; also for air
- Flexible
- Temperature Range: –65° to +500° F
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 274-278)

See what's flowing through your hose. This highly compressible hose is made from clear, 0.005″ thick PFA (perfluoroalkoxy). It has an external Type 304 stainless steel wire support that acts as a wear strip. Hose compresses 83% of its length. Can be used indoors and out.

To Order: Please order hose in 1-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72°F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Blo-R-Vac Duct for Dust with Wear Strip

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –40° to +180° F
- Internal Abrasion Resistance: Very Good
- Color: Black with orange wear strip
- Clamps: Use worm-drive clamps (see pages 274-278)

A highly visible orange wear strip on this double-ply hose provides high external wear resistance. It is made from 0.03″ thick PVC-coated polyester with an enclosed bronze-coated steel wire support. Hose compresses 60% of its length for 3″ to 5″ ID hose; 75% for 6″ to 12″ ID hose. Meets UL 94V0 and UL 94HB for flammability. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Flexible Blo-R-Vac Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Very flexible
- Temperature Range: –40° to +250° F
- Internal Abrasion Resistance: Good
- Color: Black
- Clamps: Use worm-drive clamps (see pages 274-278)

Whether it needs to go over, under, or around, this very flexible double-ply hose conforms to your installation needs. Hose is made from 0.03″ thick neoprene-coated polyester with a fabric-enclosed steel wire support. Hose compresses 67% for 1″ to 4″ ID hose; 63% for 5″ to 10″ ID hose; and 75% for 12″ to 24″ ID hose. Meets UL 94V0 for flammability. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

For information about duct hose, see page 222.

Blo-R-Vac Duct for Dust

Black

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temperature Range: –60° to +275° F
- Internal Abrasion Resistance: Very good
- Clamps: Use worm-drive and quick-release clamps (see pgs. 274-278)

You'll get the strength of plastic and the durability of rubber with this hose—it's made from blended polypropylene/rubber, which is also known as TPR (thermoplastic rubber). Hose is 0.03″ thick, except 1¼″ to 1¾″ ID hose is 0.026″ thick. It has an enclosed bronze-coated steel wire support. ***Black*** hose meets UL 94HB for flammability. The TPR material for the ***white*** hose is FDA CFR21 177.2600 compliant. All hose compresses 50% of its length, except 1¾″ ID hose compresses 25% and 8″ ID hose compresses 42%. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

High-Temperature Blo-R-Vac Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –60° to +300° F
- Internal Abrasion Resistance: Good
- Color: Black
- Clamps: Use worm-drive clamps (see pages 274-278)

A double coating of neoprene makes this 0.02″ thick fiberglass hose resistant to high temperatures. It has double-ply construction with an enclosed bronze-coated steel wire support. The 1″ to 3¾″ ID hose is not rated for compression; 4″ to 9″ ID hose compresses 66% of its length, 74% for 10″ to 12″ ID hose. Can be used indoors and out.

To Order: Please order hose in 1-ft. increments up to the full coil length of 12 ft.

Abrasion-Resistant Duct for Dust with Wear Strip

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temperature Range: –60° to +275° F
- Internal Abrasion Resistance: Very good
- Color: Black with orange wear strip
- Clamps: Use worm-drive clamps (see pages 274-278)

This abrasion-resistant hose offers the strength of plastic with the durability of rubber. It's made from 0.03″ thick TPR (thermoplastic rubber) with an enclosed bronze-coated steel wire support and a wear strip. Hose compresses 33% of its length. Meets UL 94HB for flammability. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Abrasion-Resistant Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –60° to +275° F
- Internal Abrasion Resistance: Very good
- Color: Black
- Clamps: Use worm-drive clamps (see pages 274-278)

Also known as TPR (thermoplastic rubber) hose, this single-ply hose is made from polyester and coated with a blend of EPDM rubber and polypropylene for abrasion resistance. Hose is 0.028″ thick, except the 2″ and 3″ ID hose is 0.026″ thick. All hose has an enclosed steel wire support. Hose compresses 50% of its length. Meets UL 94HB for flammability. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Flexible Abrasion-Resistant Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –65° to +300° F
- Internal Abrasion Resistance: Good
- Color: Black
- Clamps: Use worm-drive clamps (see pages 274-278)

Double-ply construction with a neoprene liner makes this hose flexible yet tough enough to resist abrasion. Hose is made from 0.024″ thick neoprene-coated fiberglass with an enclosed bronze-coated steel wire support. Hose compresses 35% of its length for 1″ to 3 1/2″ ID hose; 50% for 4″ to 10″ ID hose. Can be used indoors and out.

To Order: Please order hose in 1-ft. increments up to the full coil length of 12 ft.

Super-Abrasion-Resistant Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Very flexible
- Temp. Range: –65° to +225° F
- Internal Abrasion Resistance: Excellent
- Color: Black
- Clamps: Use worm-drive and quick-release clamps (see pgs. 274-278)

You'll get superior abrasion resistance with this hose—it's made from a polyurethane/rubber blend, which is also known as TPU (thermoplastic polyurethane). Material is 0.02″ thick, except the 2″ ID hose is 0.015″ thick. Hose has an enclosed bronze-coated steel wire support. It compresses 67% of its length for 2″ ID hose; 75% for 3″ to 6″ ID hose; and 80% for 7″ to 10″ ID hose. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Super-Abrasion-Resistant Clear Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Very flexible
- Temp. Range: –40° to +200° F
- Internal Abrasion Resistance: Excellent
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 274-278)

Offering superior abrasion resistance, this hose is clear, so you can monitor flow. Hose is made from a 0.02″ thick polyurethane/rubber blend, which is also known as TPU (thermoplastic polyurethane); it has an enclosed steel wire support. Hose compresses 58% of its length for 1 1/2″ to 6″ ID hose; compression is not rated for 3/4″ to 1 1/4″ ID hose. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Static-Dissipative Duct for Dust with Wire Support

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Very flexible
- Temperature Range: –40° to +250° F
- Internal Abrasion Resistance: Good
- Color: Black
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

The neoprene coating on this double-ply hose contains conductive carbon that creates an escape route for electrostatic buildup when you crimp a grounding wire to the wire support. Made from 0.03″ thick polyester with a fabric-enclosed steel wire support. Hose compresses 63% of its length. For indoor use.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

For information about duct hose, see page 222.

Static-Dissipative Duct for Dust with Plastic Support

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –40° to +140° F
- Internal Abrasion Resistance: Excellent
- Color: Black
- Clamps: Use twin-ring hose clamps (see page 282)

Made from SBR (styrene butadiene rubber) blended with carbon black, this hose dissipates static even without a ground wire. Hose has an enclosed PVC support. Not rated for compression. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 100 ft.

Hose ID	Hose OD	Material Thick.	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Tear-Resistant Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temperature Range: –40° to +250° F
- Internal Abrasion Resistance: Good
- Color: Black
- Clamps: Use worm-drive clamps (see pages 274-278)

Exceptionally tough for a thin-wall (0.022″ thick) hose, this TPE (thermoplastic elastomer) hose is made from a blend of polypropylene and rubber with an enclosed steel wire support. Hose compresses 50% of its length for ¾″ to 5″ ID hose; 40% for 6″ ID hose. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Economical Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –50° to +150° F
- Internal Abrasion Resistance: Excellent
- Color: Gray
- Clamps: Use worm-drive clamps (see pages 274-278)

All-polyethylene construction with no wire support means this hose offers excellent abrasion resistance at an economical price. Not rated for compression. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft.

Hose ID	Hose OD	Material Thick.	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Economical Clear Duct for Dust

- Ideal for dust and lint; also for air and smoke
- Very flexible
- Temperature Range: –20° to +180° F
- Internal Abrasion Resistance: Fair
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 274-278)

Made from 0.015″ thick clear PVC with an enclosed steel wire support, this economical hose allows you to see the flow. Hose compresses 66% of its length. Can be used indoors and out.

To Order: Please order in 5-ft. increments up to the full coil length of 25 ft.

Bend-and-Stay Duct and Fittings for Dust

Screw-On Fitting

- Ideal for dust; also for air and smoke
- Very flexible
- Temp. Range: –4° to +175° F
- Internal Abrasion Resistance: Poor
- Color: Brown or white

Bend this hose any way you like—it maintains its shape after positioning. Hose is made from 0.015″ thick polypropylene with an enclosed steel wire support. Create longer lengths by twisting one end of hose into another. Hose compresses 65% of its length. Can be used indoors and out.

***Hose*—**Comes in your choice of brown or white. **To Order:** Please order hose in 5-ft. increments up to the full coil length of 20 ft. and specify color.

***Screw-On Fittings*—**Screw onto the hose end to make connections to equipment easier. Made from EPT (ethylene-propylene terpolymer) rubber, in your choice of brown or white. **To Order:** Please specify color.

For information about duct hose, see page 222.

FDA-Compliant Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, lint, and dry food products; also for air and smoke
- Flexible
- Temp. Range: –20° to +325° F
- Internal Abrasion Resistance: Good
- Color: White
- Clamps: Use worm-drive clamps (see pages 274-278)

This hose is made from 0.03″ thick acrylic-coated polyester that is FDA CFR21 177.1010 compliant, so in addition to dust, it can be used with dry foods and pharmaceutical materials. Hose has a fabric-enclosed steel wire support. It compresses 64% of its length for 1½″ to 4″ ID hose; 80% for 5″ to 16″ ID hose. For indoor use.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

High-Flow Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temp. Range: –60° to +275° F
- Internal Abrasion Resistance: Very good
- Color: Black with gray support or white with white support
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

Instead of an internal support, this TPR (thermoplastic rubber) hose has an external polypropylene support that provides a smooth interior for up to 40% better air flow. The support acts as a wear strip. Material thickness is 0.026″ for 1″ to 4″ ID hose; 0.045″ for 6″ to 10″ ID hose. Hose compresses 33% of its length. Can be used indoors and out.

Hose comes in your choice of colors: black, which has a gray support; and all white, which is made from a TPR material that's FDA CFR21 177.2600 compliant.

To Order: Please order hose in 5-ft. increments up to the full coil length and specify black or white. Full coil length is 50 ft., except 1″ to 1¾″ ID hose in white, which has a full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Metric Duct for Dust

- Ideal for dust, grinding dust, wood sawdust, and lint; also for air and smoke
- Flexible
- Temperature Range: –40° to +250° F
- Internal Abrasion Resistance: Very good
- Color: Blue
- Clamps: Use worm-drive clamps (see pgs. 274-278)

No calculating or conversion necessary—this double-ply hose is sized for metric applications. It is made from 0.025″ thick neoprene-coated cotton with an enclosed steel wire support. Hose compresses 64% of its length. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Blo-R-Vac Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, and corrugated fibers; also for air, smoke, and dust
- Flexible
- Temperature Range: 20° to 160° F
- Internal Abrasion Resistance: Very good
- Color: Blue or clear
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

Take your blowing and venting performance to the next level—this hose is made from rugged PVC with an enclosed steel support, so it has the brawn to handle heavier materials. Hose compresses 50% of its length for 1¼″ to 8″ ID hose; 60% for 10″ to 16″ ID hose. Can be used indoors and out.

Blue hose meets UL 94V0 for flammability. ***Clear*** allows you to see the flow; the PVC material is FDA CFR21 177.1010 compliant.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. for the 1¼″ to 8″ ID hose; 25 ft. for the 10″ to 16″ ID hose.

For information about duct hose, see page 222.

Puncture- and Abrasion-Resistant Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temp. Range: –65° to +225° F
- Internal Abrasion Resistance: Excellent
- Color: Black
- Clamps: Use worm-drive and quick-release clamps (see pgs. 274-278)

Take the worry out of venting jagged and abrasive materials—this blended polyurethane/rubber hose is highly puncture resistant. It is made from TPU (thermoplastic polyurethane) and has an enclosed steel wire support. Hose compresses 50% of its length. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Puncture- and Abrasion-Resistant Clear Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, dust, and smoke
- Flexible
- Temp. Range: –65° to +200° F
- Internal Abrasion Resistance: Excellent
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 274-278)

The see-through design allows you to view what's flowing through this puncture-resistant hose. It's made from TPU (thermoplastic polyurethane), a blended polyurethane/rubber material, and has an enclosed steel wire support. ***Medium-wall*** hose compresses 50% of its length; ***thick-wall*** hose compresses 32% of its length. The TPU material is FDA CFR21 177.2600 compliant. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Extra-Strength/High-Pressure Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air and dust
- Rigid
- Temperature Range: –40° to +140° F
- Internal Abrasion Resistance: Very good
- Color: Black
- Clamps: Use bolt clamps (see pages 279-280)

This is the highest strength duct hose we offer. It's made from SBR (styrene butadiene rubber) with a double reinforcement of steel wire and yarn and an enclosed steel wire support. It has an SBR liner, except the 6″ to 10″ ID hose has a gum rubber liner. Not rated for compression. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. for 3/4″ to 4 1/2″ ID hose; 25 ft. for 5″ and 6″ ID hose; 10 ft. for 8″ and 10″ ID hose.

Aluminum Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temperature Range: –100° to +500° F
- Internal Abrasion Resistance: Good
- Clamps: Use worm-drive clamps (see pgs. 274-278)

Stretch and bend this flexible hose into shape without the need for elbows. Hose is made from 0.005″ thick aluminum and compresses 83% of its length. Material meets UL 181 Class 0. Not rated for vacuum. Can be used indoors and out.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	15-ft. Length	Each	30-ft. Length	Each

For information about duct hose, see page 222.

Continuous-Flex Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temperature Range: –40° to +250° F
- Internal Abrasion Resistance: Very good
- Color: Black
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

This double-ply hose stands up to the rigors of continuous motion. It is made from 0.03″ thick neoprene-coated nylon with a fabric-enclosed steel wire support. Hose compresses 67% of its length for 1″ to 3″ ID hose; 69% for 4″ and 5″ ID hose; 72% for 6″ to 8″ ID hose; and 75% for 10″ to 24″ ID hose. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Economical Duct for Chips and Shavings

- Ideal for wood chips and corrugated fibers; also for air, smoke, and dust
- Flexible
- Temperature Range: –40° to +220° F
- Internal Abrasion Resistance: Good
- Color: Black
- Clamps: Use twin-ring hose clamps (see page 282)

Value meets strength with this super-tough hose—it is made from EPDM rubber with an embedded steel wire support. Material is 0.047″ thick, except 2½″ and 3″ ID hose is 0.039″ thick. Hose compresses 60% of its length. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. for the 2½″ to 10″ ID hose; 25 ft. for the 12″ ID hose.

Impact-Resistant Duct and Fittings for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temperature Range: –65° to +140° F
- Internal Abrasion Resistance: Very good
- Color: Gray

Commonly used as vacuum hose, this hose is made from EVA (ethylene vinyl acetate) with an EVA support for excellent impact resistance. It can be used indoors and out.

Hose—The full coil length is 50 ft. for 1¼″ and 1½″ ID hose; 25 ft. for 2″ to 3″ ID hose. **To Order:** Please order hose in 5-ft. increments up to the full coil length.

Screw-On Fittings—Made from gray PVC. They provide easy connection to equipment.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F	Hose	Per Ft. Partial Coil	Per Ft. Full Coil	Screw-On Fittings ID (A)	ID (B)		Each

Screw-On Fitting

Easy-Clamp Duct Couplers for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Temperature Range: Natural Rubber: –20° to +180° F; Neoprene Rubber: 0° to +212° F
- Internal Abrasion Resistance: Excellent
- Clamps: Use worm-drive and quick-release clamps (see pages 274-278)

Make a connection to vibratory equipment, such as sifters and screeners, with these one-piece, bellows-style couplers. They have a clamping collar on each end. Material is 3/16″ thick. Not rated for pressure, vacuum, or compression. For indoor use.

Natural Rubber—Material is FDA CFR21 177.2600 compliant. **To Order:** Please specify color: amber or white.

Neoprene Rubber—Harder than natural rubber, but slightly less resilient. **To Order:** Please specify color: black or white.

Coupler ID	Coupler OD	NATURAL RUBBER 12″ Length	Each	NEOPRENE RUBBER 12″ Length	Each
4″	5″	9394K31	$42.00

8″	9″	9394K35	63.00	9394K46	68.09
10″	11″	9394K37	71.00	9394K48	75.55

For information about duct hose, see page 222.

High-Pressure Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temperature Range: 0° to 158° F
- Internal Abrasion Resistance: Excellent
- Color: Blue
- Clamps: Use worm-drive and twin-ring hose clamps (see pages 274-278 and 282)

A polyurethane liner gives this hose extra strength to handle high pressure and vacuum, as well as excellent abrasion resistance. Hose is made from PVC with an enclosed PVC support. Not rated for compression. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 100 ft. for 1 1/2″ to 4″ ID hose; 50 ft. for 5″ and 6″ ID hose.

Hose ID	Hose OD	Material Thick.	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Static-Dissipative Clear Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temp. Range: –20° to +200° F
- Internal Abrasion Resistance: Excellent
- Color: Clear
- Clamps: Use worm-drive clamps (see pages 274-278)

Just crimp a grounding wire to the wire support on this hose and you'll create an escape route for electrostatic buildup. Made from 0.035″ thick TPU (thermoplastic polyurethane) with an enclosed bronze-coated steel wire support, this clear hose allows you to view the flow. The TPU material is FDA CFR21 177.2600 compliant. Hose compresses 50% of its length. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Abrasion-Resistant Duct with Metal Wear Strip for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Flexible
- Temp. Range: –20° to +250° F
- Internal Abrasion Resistance: Very good
- Color: Black
- Clamps: Use worm-drive clamps (see pages 274-278)

Both internally and externally, this rugged hose stands up to abrasion. It's made from 0.03″ thick polyurethane with an external galvanized steel support that acts as a wear strip to protect the hose from damage caused by dragging. The polyurethane material is FDA CFR21 177.2600 compliant. Hose compresses 75% of its length. Can be used indoors and out.

To Order: Please order hose in 1-ft. increments up to the full coil length of 25 ft.

Static-Dissipative Duct with Fittings Attached for Chips and Shavings

- Ideal for wood chips, corrugated fibers, plastic pellets, and powders; also for air and dust
- Flexible
- Temperature Range: –60° to +180° F
- Internal Abrasion Resistance: Very good
- Color: Clear with black fittings

This hose has an imbedded grounding wire along with carbon-impregnated vinyl fittings to eliminate static buildup when connected to metal equipment on one end and a metal tool on the other. Commonly used as vacuum hose, it is made from clear polyurethane with a steel wire support. Not rated for compression. Can be used indoors and out.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F	10-ft. Length	Each	15-ft. Length	Each	25-ft. Length	Each

FDA-Compliant Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, powders, and dry food products; also for air, smoke, and dust
- Flexible
- Temp. Range: –20° to +180° F
- Internal Abrasion Resistance: Excellent
- Color: Clear with white support

Tough enough to handle chips and shavings, the TPU material of this hose is FDA CFR21 177.2600 compliant, so it can also be used with dry foods and pharmaceutical materials. Commonly used as vacuum hose, it will dissipate static buildup when used in a fully grounded system. It's made from TPU (thermoplastic polyurethane) with an external ABS plastic support and a wear strip. Not rated for compression. Can be used indoors and out.

Screw-on fittings provide an easy connection to equipment. Made from white PVC. *Note*: Fittings are not FDA compliant.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. for 1 1/4″ to 1 3/4″ ID hose; 25 ft. for 2″ to 4″ ID hose.

Screw-On Fitting

For information about duct hose, see page 222.

Metric Crush-Resistant Clear Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, powders, and dry food products; also for air, smoke, and dust
- Very flexible
- Temperature Range: –40° to +195° F
- Internal Abrasion Resistance: Excellent
- Color: Clear with blue support
- Clamps: Use worm-drive clamps (see pages 274-278)

You can step on this hose and it will pop right back to its original shape. Sized for metric applications, it's made from 0.02″ thick polyurethane with an exposed polyurethane support that acts as a wear strip. Material is FDA CFR21 177.2600 compliant. Not rated for compression. Can be used indoors and out.

To Order: Please order in 5-ft. increments up to the full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Any-Which-Way Duct and Nozzles for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Duct is flexible
- Temperature Range: –40° to +170° F
- Internal Abrasion Resistance: Good
- Color: See below

The ball-and-socket design of this crush-resistant hose allows you to reposition it again and again in any direction without it springing back. Commonly used as vacuum hose, it can be easily integrated into an existing central or portable vacuum system. Not rated for compression or pressure. For indoor use.

Hose comes in 1-ft. lengths. You can make up to a 20-ft. length by snapping lengths together (hose is self supporting up to 3 feet). Made from acetal polymer. *Antistatic hose* must be attached to a grounded system to create an escape route for electrostatic buildup.

Nozzles snap onto the end of the hose. They're made from acetal polymer. *Round* have a 4½″ dia. opening. *Tapered* are 5¾″ long.

Adapters allow easy connection to 3″ dia. metal duct in an existing vacuum system. Made from PVC.

Super-Abrasion-Resistant Metal Duct for Chips and Shavings

- Ideal for wood chips, metal shavings, corrugated fibers, plastic pellets, and powders; also for air, smoke, and dust
- Rigid
- Maximum Temperature: Galvanized Steel: 550° F; Type 304 SS: 1000° F
- Internal Abrasion Resistance: Excellent
- Clamps: Use U-bolts (see pages 1534-1536)

Also known as smooth-bore metal hose, this hose has an internal metal strip that bridges the gaps formed by the interlocked design to provide smooth flow. Hose is designed for flow in one direction; flow direction is marked on the hose. Material thickness is 0.015″. This hose is not airtight and is not rated for compression, pressure, or vacuum.

Galvanized Steel— Has fair corrosion resistance. For indoor use.

Type 304 Stainless Steel— Offers very good corrosion resistance. Can be used indoors and out.

To Order: Please order hose in 5-ft. increments up to the full coil length of 25 ft.

Crush-Resistant Duct and Fittings for Liquids

- Ideal for water and chemicals such as citric acid and boric acid; also for air, smoke, dust, chips, and shavings
- Flexible
- Temp. Range: –40° to +140° F
- Internal Abrasion Resistance: Very good
- Color: Black or gray

Don't worry if you step on this hose—it will bounce right back to its original shape. Commonly used as vacuum hose, it's made from polyethylene with an external polyethylene support. Hose is not rated for compression. Can be used indoors and out.

Screw-on fittings are made from gray PVC. They provide an easy connection to equipment.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. and specify color: black or gray.

Crush-Resistant Flexible Duct and Fittings for Liquids

Hose

Screw-On Fitting

Hose with Fitting Attached

- Ideal for water, oil, and chemicals, such as citric and acetic acids; also for air, smoke, dust, plastic pellets, and wood chips
- Flexible
- Temperature Range: 5290K Series: –20° to +150° F; 9020T Series: Up to +140° F
- Internal Abrasion Resistance: 5290K Series: Excellent; 9020T Series: Good

Here's our most flexible crush-resistant hose. Commonly used as vacuum hose, it's made from low-density polyethylene, so it will bounce back to its original shape if stepped on. Hose is not rated for compression. Can be used indoors and out.

Hose is dual-color; see below for color. **To Order:** Please order hose in 5-ft. increments up to full coil length of 50 ft. for ½″ to 3½″ ID hose; 10 ft. for the 4″ ID hose.

Screw-on fittings are made from gray PVC. They provide an easy connection to equipment.

Hose with fittings attached come in your choice of hose color with white polyethylene fittings. **To Order:** Please specify hose color: blue, gray, green, red, or yellow.

Abrasion-Resistant Duct and Fitting for Liquids

Push-On Fitting

- Ideal for water and noncorrosive acids; also for air, smoke, dust, chips, and shavings
- Flexible
- Temperature Range: Hose: –20° to +325° F; Fitting: –20° to +150° F
- Internal Abrasion Resistance: Excellent
- Color: Gray or black

Commonly used as vacuum hose, this flexible hose is made from ⅛″ thick EPDM rubber, so it will easily bounce back to its original shape if stepped on. Hose is not rated for compression or pressure. Can be used indoors and out.

Push-on fitting connects hose to a portable vacuum. Simply insert the small-diameter end into the hose cuff. The small-diameter end has a 1 13/16″ ID and 2″ OD; the large-diameter end has a 2 1/16″ ID and 2¼″ OD. Color is black.

High-Temperature/Smooth-Bore Duct and Fittings for Liquids

Hose

Antistatic Fitting

Hose with Antistatic Fitting Attached

- Ideal for water, hydraulic oil, oil, and chemicals, such as citric and acetic acids; also for air, smoke, dust, chips, and shavings
- Flexible
- Temperature Range: –20° to +300° F
- Internal Abrasion Resistance: Excellent
- Color: Blue or green

Made from PVC-coated foam, this hose withstands high temperatures. Commonly used as vacuum hose, it has a wire support and a smooth interior for unrestricted flow and easier cleaning. Hose also resists crushing and kinking. Can be used indoors and out.

Hose comes in your choice of blue or green. **To Order:** Please order hose in 5-ft. increments up to the full coil length of 50 ft. and specify color.

Antistatic fittings are gray vinyl with a steel support. Use them to connect hose to your equipment. They slide onto the hose and secure with set screws (included). They eliminate static buildup and ground the hose for antistatic flow.

Hose with antistatic fittings attached comes in your choice of hose color with gray fittings attached. **To Order:** Please specify hose color: blue or green.

For information about duct hose, see page 222.

Smooth-Bore Duct and Fittings for Liquids

- Ideal for water; also for air, smoke, and dust
- Flexible
- Temperature Range: 15° to 125° F
- Internal Abrasion Resistance: Good
- Color: White

Commonly used as vacuum hose, this hose has a smooth internal surface that provides unrestricted flow and is easier to clean. It's made from PVC with a PVC support. Not rated for compression. Can be used indoors and out.

Screw-on fittings are made from gray PVC. They provide easy connection to equipment.

To Order: Please order hose in 5-ft. increments up to the full coil length of 100 ft. for 1″ to 4″ ID hose; 30 ft. for 6″ ID hose.

Screw-On Fitting

Super-Flexible Duct and Fittings for Liquids

- Ideal for water and oil; also for air, smoke, dust, chips, and shavings
- Very flexible
- Temperature Range: −20° to +150° F
- Internal Abrasion Resistance: Good
- Color: Gray

Twist this super-flexible hose any way you like. Commonly used as vacuum hose, it can be used indoors and out. Hose is made from PVC with an enclosed steel wire support. Not rated for compression.

Screw-on fittings are made from gray PVC. They provide easy connection to equipment.

Thread × thread fitting is made from gray PVC. Use it to connect two lengths of hose.

To Order: Please order hose in 5-ft. increments up to the full coil length of 50 ft. for 1 1/4″ to 2 1/2″ ID hose; 25 ft. for 3″ and 4″ ID hose.

Thread × Thread Fitting for 2″ ID Hose ..... 5500K16 Each $9.18

Screw-On Fitting

Duct Connectors

- Use with fabric, plastic, rubber, blended rubber, and light-gauge metal duct hose
- Temperature Range:
  Aluminum: −100° to +400° F
  Neoprene-Coated Aluminum: −40° to +250° F
  Type 304 SS: −400° to +800° F
  Galvanized Steel: −40° to +450° F
- Clamps: Use worm-drive clamps (see pages 274-278)

Join sections of duct hose to create longer lengths. Not rated for pressure or vacuum. Can be used indoors and out.

Aluminum is lightweight.

Neoprene-coated aluminum prevents connectors from scratching surfaces.

Type 304 stainless steel offers very good corrosion resistance.

Galvanized steel has fair corrosion resistance.

Part A

Part B

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID) as shown at left. Then round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″

About Hose

While our hose is offered with the most popular fitting styles attached, we also offer hose without fittings so you can customize it to suit your needs. If you choose to add your own fittings to the hose, you'll need to secure them with a hose clamp (see pages 274-285 for hose clamps). For barbed hose fittings, see pages 286-290.

Note: For garden hose and garden hose fittings, please see pages 2079-2081.

Bend Radius— Measured from the center point to the inside edge of the hose, this is the minimum radius you can bend a hose without damaging it or shortening its life. The smaller the bend radius, the greater the flexibility.

Vacuum Rating— Vacuum, or negative pressure, is measured in inches of mercury (Hg). The larger the number, the higher the vacuum. *Low* = 1″ to 24″ Hg; *Medium* = 25″ to 27″ Hg; *High* or *Full* = 28″ to 29.9″ Hg.

Air and Water Hose

Hose

Male Fitting

Easy-Install Female Fitting

- Use with air and water; not for use with steam or oil
- Temp. Range: –40° to +200° F, unless noted
- Color: Black or red
- Hose: EPDM rubber, except 3/16″ ID hose is Buna-N (nitrile)
- Cover: EPDM rubber, except 3/16″ ID hose is neoprene
- Reinforcement: Polyester yarn

EPDM is the most widely used rubber for air and water applications. This hose has a smooth interior for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are brass. The *1/4″* to *3/4″ pipe sizes* have NPTF (Dryseal) threads (unless noted), which are compatible with female NPTF and NPT threads. The *1″* to *1 1/2″ pipe sizes* have NPSM (National Pipe Straight Mechanical) threads, which are compatible with female NPSM and NPSH threads.

Easy-install female fittings turn 360° until they are tightened down during installation. They're brass and have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads. The *1/4″* to *3/4″ pipe sizes* have a metal-to-metal (ball seat) seal (unless noted); *1″* to *1 1/2″ pipe sizes* have a washer seal.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 1-, 2-, 3-, 4-, 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

▲ Temperature range is –20° to +200° F. ■ Male fittings have NPSM threads. ★ Female fittings have a washer seal.

For information about hose, see page 240.

Air and Water Hose with Quick-Connect Fittings

- Use with air and water, except quick-disconnect fittings are for use with air only; not for use with steam or oil
- Temperature Range: –40° to +200° F
- Color: Black or red
- Hose: EPDM rubber
- Cover: EPDM rubber
- Reinforcement: Polyester yarn

We've combined EPDM hose with quick-connect fittings so you can easily connect and disconnect your hose line. Hose has a smooth interior for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Hose

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length and specify color: black or red.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings along with your desired hose length and color: black or red. To determine your total price, add the price of the hose to the price of the set of fittings.

Quick-Disconnect and Easy-Install Male Fittings

Quick-disconnect sockets and ***plugs*** are industrial shape. They meet the dimensional requirements of Fed. Spec. A-A-59439. *Sockets* are sleeve-lock style; *1/4″* and *3/4″ coupling sizes* are brass, *3/8″* and *1/2″ coupling sizes* are steel. *Plugs* are steel. For information about quick-disconnect couplings, see page 298.

Easy-install male fittings turn 360° until they are tightened down during installation. They're brass and have NPTF (Dryseal) threads, which are compatible with female NPTF and NPT threads.

Twist-Claw and Male Fittings

Twist-claw fittings are also known as universal hose couplings. All are malleable iron. The fittings on *1/2″* to *1″ ID hose* have two claws and are interchangeable with one another regardless of the hose size; fittings on the *1 1/4″* and *1 1/2″ ID hose* have four claws and are interchangeable with each other regardless of the hose size.

Male fittings are brass. Pipe sizes *1/2″* to *1″* have NPTF (Dryseal) threads, which are compatible with female NPTF and NPT threads. Pipe sizes *1 1/4″* and *1 1/2″* have NPSM threads, which are compatible with female NPSM and NPSH threads.

Choose-a-Color Air and Water Hose

- Use with air and water, except quick-disconnect fittings are for use with air only
- Temperature Range: 25° to 150° F
- Color: Blue, gray, red, or yellow
- Hose: PVC
- Cover: PVC
- Reinforcement: Polyester yarn

Color-code your air and water lines for easy identification. Hose is made from PVC, which is lighter in weight than EPDM rubber. For indoor use. Not rated for vacuum.

Male fittings are brass and have NPT threads.

Easy-install female fittings turn 360° until they are tightened down during installation. They're brass and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with male NPSM, NPT, and NPTF threads. All have a metal-to-metal (ball seat) seal.

Quick-disconnect sockets and ***plugs*** are industrial shape. They meet the dimensional requirements of Fed. Spec. A-A-59439. *Sockets* are sleeve-lock style, except the *3/4″* and *1″ coupling sizes* are push-to-connect style; all sockets are brass with a steel sleeve. *Plugs* are zinc-plated steel. For information about quick-disconnect couplings, see page 298.

♦ Available in red only. ♠ Not available in gray.

For information about hose, see page 240.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID) as shown at left. Then round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Lubricated Air and Water Hose

Hose

Male Fitting

Easy-Install Female Fitting

- Use with lubricated air and water; not for use with fuel
- Temp. Range: −20° to +160° F
- Color: Red
- Hose: Blended rubber (SBR/NBR), except 3/16″ and 5/16″ ID hose are Buna-N (nitrile) rubber
- Cover: Blended NBR/SBR/PVC, except 3/16″ and 5/16″ ID hose are neoprene
- Reinforcement: Polyester yarn

Use this hose with lubricated air—the hose material meets RMA (Rubber Manufacturers Association) Class A for oil resistance. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are brass. The *1/4″* to *3/4″ pipe sizes* have NPTF (Dryseal) threads, which are compatible with female NPT threads. The *1″* to *1 1/2″ pipe sizes* have NPSM threads, which are compatible with female NPSM and NPSH threads.

Easy-install female fittings turn 360° until they are tightened down during installation. They are brass and have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads. The *1/4″* to *3/4″ pipe sizes* have a metal-to-metal (ball seat) seal; *1″* to *1 1/2″ pipe sizes* have a washer seal.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 1-, 2-, 3-, 4-, 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Air, Water, and Oil Hose

Hose

Male Fitting

Easy-Install Female Fitting

- Use with lubricated air, water, and oil; not for use with gasoline
- Temp. Range: −20° to +160° F
- Color: Brown
- Hose: NBR rubber
- Cover: Blended NBR/PVC
- Reinforcement: Polyester yarn

Made from a strong rubber material that meets RMA (Rubber Manufacturers Association) Class A for oil resistance, you can use this hose with oil. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are brass and have NPT threads.

Easy-install female fittings turn 360° until they are tightened down during installation. They're brass and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with male NPSM, NPT, and NPTF threads and a metal-to-metal (ball seat) seal.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings you'd like and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

High-Pressure/Vacuum Air, Water, and Oil Hose

Male Fitting

90° Elbow

- Use with air, water, and oil
- Temp. Range: −20° to +170° F
- Color: Yellow
- Hose: Buna-N (nitrile) rubber
- Cover: High-strength Buna-N (nitrile) rubber
- Reinforcement: Aramid fiber yarn

Tough enough to handle high pressure, this hose also has what it takes to handle full-vacuum applications. It is commonly used in vacuum-bagging applications where pressure is applied on fiberglass or laminate to remove air, compact laminate fibers, and reduce humidity. Hose is furnished with the fittings attached; the fittings are brass and have NPT threads. The Buna-N material meets RMA (Rubber Manufacturers Association) Class A for oil resistance, as well as MSHA (Mine Safety and Health Administration) 2G-14C/14 standards for flame resistance. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

For information about hose, see page 240.

High-Pressure Air, Water, and Oil Hose

- Use with air, water, and oil; not for use with gasoline or as a fuel hose
- Temperature Range: –20° to +190° F
- Color: Yellow
- Hose: Buna-N (nitrile) rubber
- Cover: High-strength Buna-N (nitrile) rubber
- Reinforcement: Aramid fiber yarn

Hose

Male Fitting

Easy-Install Female Fitting

This high-pressure hose stands up to oil. The Buna-N material meets RMA (Rubber Manufacturers Association) Class A for oil resistance, as well as MSHA (Mine Safety and Health Administration) 2G-14C/14 standards for flame resistance. Hose has a smooth interior for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings have NPT threads. The ¼″ to ¾″ pipe sizes are brass; 1″ to 2″ pipe sizes are steel.

Easy-install female fittings turn 360° until they are tightened down during installation. The ¼″ to ¾″ pipe sizes are brass; 1″ to 2″ pipe sizes are steel. They have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads. All have a metal-to-metal (ball seat) seal.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Retracting Air and Water Hose

- Use with air and water
- Temperature Range:
  Low Temperature: –40° to +125° F;
  Medium Temperature: –40° to +165° F;
  High Temperature: –40° to +180° F
- Color: See below
- Hose: Polyurethane
- Cover: Polyurethane
- Reinforcement: None

Hose with One Male and One Easy-Install Male Fitting

More flexible than nylon, this polyurethane hose retracts out of the way when not in use. Hose is furnished with fittings attached; all fittings are brass and have NPT threads. The easy-install fittings turn 360° until tightened down during installation. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 27″ Hg @ 72° F.

Low-Temperature Hose with Two Easy-Install Male Fittings— The polyurethane material is NSF 61 certified for use with drinking (potable) water; it also meets UL 94HB for flammability. The fittings have a permanent threadlock sealant. **To Order:** Please specify color: neon green, red, transparent blue, or yellow.

Medium-Temperature Hose with Two Easy-Install Male Fittings— The fittings have a PTFE sealant. **To Order:** Please specify color: black or neon orange, unless noted.

High-Temperature Hose with One Male and One Easy-Install Male Fitting— Color is transparent blue.

Dual-Line Retracting Air Hose

- Use with air
- Temperature Range: –40° to +200° F
- Color: Red
- Hose: Nylon
- Cover: Nylon
- Reinforcement: None

Two nylon hoses bonded side-by-side neatly provide two air connections. Hose retracts out of the way when not in use. Hose is furnished with brass easy-install male fittings attached to each end; fittings have NPT threads and turn 360° until tightened down during installation. The hose also has a spring guard on each end to reduce strain. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Air Hose

For information about hose, see page 240.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID) as shown at left. Then round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Retracting Air Hose

Yellow Hose

Male Fitting

Easy-Install Male Fitting

Quick-Disconnect Socket

Quick-Disconnect Plug

- Use with air
- Temperature Range: –40° to +200° F
- Color: Yellow or blue
- Hose: Nylon
- Cover: Nylon
- Reinforcement: None

Made from nylon, this economical hose retracts out of the way when not in use. Can be used indoors and out.

Yellow Hose— Hose has a smooth interior for unrestricted flow and spring guards attached to each end to reduce strain. Vacuum rating is 28″ Hg @ 72° F. *Male fittings* are brass with NPT threads; the *easy-install* style turn 360° until tightened down during installation. *Quick-disconnect sockets* are sleeve-lock style and steel (unless noted); *quick-disconnect plugs* are zinc-plated steel (see page 298 for information about quick-disconnect couplings).

Blue High-Pressure Hose— A smooth interior provides unrestricted flow. Not rated for vacuum. Hose has brass easy-install male fittings with NPT threads and an acrylic sealant; they turn 360° until tightened down during installation.

Also Available: Retracting hose that meets Department of Transportation (D.O.T. FMVSS 106) criteria. Hose has a 3/8″ ID and comes with two male NPT brass fittings. Please ask for 5367K1 and specify color: blue or red.

Assemble-Your-Own Retracting Air Hose

- Use with air
- Temp. Range: –40° to +200° F
- Color: Red or yellow
- Hose: Nylon
- Cover: Nylon
- Reinforcement: None

The hose and fittings are sold separately, so you can build a hose line to meet your needs.

Hose— Retracts out of the way when not in use. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Fittings Kits— All include a brass fitting with NPT threads, an insert, a sleeve, a nut, and a spring guard, except the kit for 3/4″ hose ID does not include the spring guard. The fitting in the *easy-install male kit* turns 360° until tightened down during installation.

Choose-a-Color Air Hose

- Use with air
- Temp. Range: –40° to +185° F
- Color: Blue, red, or translucent turquoise
- Hose: Polyurethane
- Cover: Polyurethane
- Reinforcement: Polyester yarn

Hose

Male Fitting

Easy-Install Female Fitting

Offered in your choice of three colors so you can easily identify your air lines. Hose has a smooth interior for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are brass and have NPTF (Dryseal) threads, which are compatible with female NPT threads.

Easy-install female fittings turn 360° until tightened down during installation. They're brass and have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads. All have a metal-to-metal (ball seat) seal.

Hose— Comes in your choice of blue, red, or translucent turquoise, unless noted. **To Order:** Please order in 5-ft. increments up to the full coil length of 100 ft. and specify color.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings and your desired hose length and color choice: blue, red, or translucent turquoise, unless noted. To determine your total price, add the price of the hose to the price of the set of fittings.

♣ Not available in translucent turquoise.

High-Pressure Air Hose

- Use with air
- Temperature Range: –22° to +176° F
- Color: Yellow
- Hose: Blended rubber (SBR/NBR)
- Cover: SBR rubber
- Reinforcement: Steel wire

Hose

Male Fitting

Female Fitting

Reinforced with steel wire, this hose can withstand higher pressure than other types of air hose. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Fittings are also known as ground-joint couplings. All have NPT threads. The *1/2" to 1" pipe sizes* are zinc-plated steel; the *1 1/4" to 2" pipe sizes* are zinc-plated ductile iron.

Hose— Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, or 25-ft., or any length you choose up to 50 ft. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Easy-Install Air Hose System

If your vision for the perfect shop includes compressed-air outlets located exactly where you need them, this is the system for you. With this system and the accessories below, you'll have everything you need to distribute air from your compressor to as many outlets as you desire. You can surface-mount this system to the walls and ceiling or install it before the walls go up. For indoor use. Temperature range is –40° to +180° F. Maximum pressure is 150 psi @ 72° F. Not rated for vacuum.

Master Kit

Includes 100 ft. of 5594K13 air hose, an aluminum manifold with one inlet and three outlets, two aluminum outlet blocks, six 5594K21 adapters, four 5594K23 90° elbows, two valves, two 1/4" NPT brass nipples, two 1/4" NPT 45° brass elbows, three 3/8" NPT brass plugs, and a plastic hose cutter.

5594K11 ..... **Each** $120.37

Additional Air Hose

This all-nylon hose is blue with a smooth interior for unrestricted flow. Hose ID is 3/8"; hose OD is 1/2". Furnished with a plastic hose cutter. Sold in 100-ft. lengths.

5594K13 ..... **Each** $46.88

Additional Outlets

Each outlet comes with an aluminum outlet block, a 5594K21 adapter, 5594K23 90° elbow, valve, 1/4" NPT brass nipple, 1/4" NPT 45° brass elbow, and 3/8" NPT brass plug.

5594K12 ..... **Each** $25.49

Accessories

The ***coupling***, ***90° elbows***, ***tee***, and ***adapter*** have a black polyamide body (except the adapter is nickel-plated brass), an acetal release button, a stainless steel grab ring, and a Buna-N (nitrile) rubber O-ring; accessories *with male pipe threads* have nickel-plated brass 3/8" NPT threads with a PTFE thread sealant. The ***quick-disconnect female socket*** is made from brass; it is industrial shape, sleeve-lock style with a 1/4" coupling size (for more information about quick-disconnect couplings, see page 298).

Coupling — Each
5594K25 ..... $5.10

90° Elbow, Male Pipe — Each
5594K24 ..... $7.62

90° Elbow — Each
5594K23 ..... $5.04

Tee — Each
5594K22 ..... $6.56

Adapter, Male Pipe — Each
5594K21 ..... $5.68

Quick-Disconnect Female Socket — Each
6536K28 ..... $5.11

Air Hose, Whip Checks & Water Hose

For information about hose, see page 240.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID) as shown at left. Then round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

Bend-and-Stay Hose for Compressed Air

- Use with compressed air
- Maximum Temperature: 800° F

Bend this flexible hose and it will stay in place. The hose is made from Type 304 stainless steel; the interior is ribbed. The fittings are brass and have NPT threads. For indoor use. Not rated for vacuum. *Note*: Not for continuous flexing or vibration applications.

Union connectors are brass. They allow you to join two lengths of hose.

Hose ID	Hose OD	Pipe Size	Bend Radius	Max. psi @ 72° F	HOSE WITH ONE MALE AND ONE FEMALE FITTING ATTACHED: 5-ft. Length	Each	10-ft. Length	Each	15-ft. Length	Each	25-ft. Length	Each	UNION CONNECTORS	Each

Air Hose Impact Absorbers

Male Fitting

Easy-Install Female Fitting

Easy-Install Male Fitting

Install one of these short lengths of hose between your source hose and tool to absorb impact and vibration that can shorten the life of your air hose. For use with air only. Fittings are brass with NPT threads; *easy-install fittings* turn 360° until tightened down during installation. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

PVC hose is lighter in weight and more economical than neoprene and polyurethane. Both the hose and cover are PVC; the reinforcement is rayon cord. Temperature range is –20° to +150° F. Color is blue.

Neoprene hose can withstand higher temperatures than PVC and polyurethane. The hose is Buna-N (nitrile) rubber, the cover is neoprene, and the reinforcement is rayon cord. Temperature range is –40° to +212° F. Color is blue.

Polyurethane hose is the most flexible choice. Both the hose and cover are polyurethane; hose is not reinforced. Temperature range is –40° to +165° F. Color is translucent blue.

Air Hose Whip Checks

Hose-to-Tool

Prevent hose from whipping when couplings are accidentally disconnected. These whip checks are made from steel cable and meet OSHA and MSHA (Mine Safety and Health Administration) safety standards. Maximum working pressure is 200 psi.

Hose-to-hose whip checks have two spring-loaded loop ends that easily pass over the hose ends for a firm grip. ***Hose-to-tool*** whip checks have a spring-loaded loop on one end and a choker on the other end.

Drinking Water Hose

Hose

Male Fitting

Easy-Install Female Fitting

- Use with air and water
- Temp. Range: –18° to +180° F
- Color: Opaque gray
- Hose: Blended EPDM/polypropylene
- Reinforcement: Polyester yarn
- Cover: Blended EPDM/polypropylene

The hose and fittings are made from materials that comply with NSF 61, making them certified for use with drinking (potable) water. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are white nylon with NPT threads.

Easy-install female fittings turn 360° until tightened down during installation. They're white nylon with NPSM (National Pipe Straight Mechanical) threads, which are compatible with male NPSM, NPT, and NPTF threads. They have a ball-seat seal.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, or 20-ft., or any length you choose up to 100 ft. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	HOSE:	Per Ft. Partial Coil	Per Ft. Full Coil	FITTINGS (ATTACHED TO THE HOSE): Pipe Size	Two Male Fittings	Per Set	One Male and One Easy-Install Female Fitting	Per Set

For information about hose, see page 240.

Washdown Water Hose

Medium Pressure
- Use with water
- Temp. Range: +10° to +180° F
- Color: Yellow
- Hose: Blended PVC/rubber
- Cover: Blended PVC/rubber
- Reinforcement: Two polyester spirals

High Pressure
- Use with water
- Temp. Range: –40° to +180° F
- Color: Yellow
- Hose: Buna-N (nitrile) rubber
- Cover: Blended PVC/Buna-N (nitrile) rubber
- Reinforcement: Braided wire

It's the reinforcement that gives this hose the strength to handle medium- and high-pressure washdown applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Hose

Hose—Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.
Fittings (Attached to the Hose)—Assembled in lengths of 5-, 10-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Medium Pressure

Fittings are brass. *Male* fittings have NPT threads. *Easy-install female* fittings rotate 360° until tightened down during installation; they have NPSH (National Pipe Straight Hose) threads, which are compatible with male NPSH, NPSM, NPT, and NPTF threads.

Male

Easy-Install Female

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	HOSE Per Ft. Partial Coil	HOSE Per Ft. Full Coil	Pipe Size	FITTINGS (ATTACHED TO THE HOSE) Two Male Fittings Per Set		One Male and One Easy-Install Female Fitting Per Set

Fire-Resistant High-Pressure Washdown Water Hose

- Use with water
- Temperature Range: –22° to +200° F
- Color: Yellow
- Hose: Blended rubber (SBR/NBR)
- Cover: Blended rubber (SBR/NBR)
- Reinforcement: Steel wire

Hose

Also known as mine-spray hose, a specially formulated cover makes this hose ideal for severe operating conditions, such as those found when controlling dust in mines. The cover material meets MSHA (Mine Safety and Health Administration) IC-152/6 standards for fire resistance. The steel reinforcement gives this hose strength to handle high-pressure applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.
Fittings are also known as ground-joint couplings. All have NPT threads. The fittings with *3/4"* and *1"* *pipe sizes* are zinc-plated steel; *1 1/2"* and *2"* *pipe sizes* are zinc-plated malleable iron.

Male

Hose—Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.
Fittings (Attached to the Hose)—Assembled in lengths of 5-, 10-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Washdown Water Hose for Clean Environments

- Use with water
- Temperature Range: –25° to +200° F
- Color: White
- Hose: SBR rubber
- Cover: SBR rubber
- Reinforcement: Spiral-plied synthetic yarn

Hose

This hose, also known as creamery and paper-mill hose, has a white cover that easily shows dirt—great for washdown applications in clean environments. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.
Fittings are brass and have NPSM (National Pipe Straight Mechanical) threads. Male NPSM threads are compatible with female NPSM and NPSH threads. Female NPSM threads are compatible with male NPSM, NPT, and NPTF threads. *Easy-install female* fittings rotate 360° until tightened down during installation; they have a washer seal.

Male

Hose—Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.
Fittings (Attached to the Hose)—Assembled lengths of 5-, 10-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Easy-Install Female

For information about hose, see page 240.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	6 5/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	6″

High-Pressure Washdown Hot-Water Hose

Hose

Male

Female

- Use with water
- Temperature Range: –40° to +200° F
- Color: Black
- Hose: Neoprene rubber
- Cover: Neoprene rubber
- Reinforcement: Synthetic yarn

Choose this hose for high-pressure, hot-water washdown applications. The neoprene material meets SAE 100R3. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Fittings are zinc-plated steel and have NPT threads. *Easy-install female fittings* rotate 360° until tightened down during installation.

Hose— Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled lengths of 5-, 10-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Pressure-Washer and Steam-Cleaner Hose

Hose

Male

Easy-Install Male

Designed to withstand the temperature and pressure requirements of most pressure washers and steam cleaners. The cover material meets RMA (Rubber Manufacturers Association) Class B for oil resistance. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum. Color is black.

Fittings are made of zinc-plated steel and have NPT threads. *Easy-install male fittings* turn 360° until tightened down during installation.

Pressure-washer hose is for use with water. It's made from Buna-N (nitrile) rubber with a synthetic rubber cover. The reinforcement is synthetic yarn on hose rated 1500 psi; braided steel wire on hose rated 3000 psi. Temperature range is –20° to +200° F.

Combination pressure-washer/steam-cleaner hose is for use with hot water and steam (not for cold-water service). It's made from synthetic rubber with a Hypalon rubber cover and braided steel wire reinforcement. Temperature range is 0° to +250° F for pressure washing; 0° to +325° F for steam cleaning.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 10-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

♣ This rating decreases to 350 psi @ 325° F for steam-cleaner applications. ■ Has two male fittings (not easy-install style).

Low-Pressure Steam Hose

Hose

Male

Female

- Use with steam
- Temperature Range: –40° to +450° F
- Color: Black or red
- Hose: EPDM rubber
- Cover: EPDM rubber
- Reinforcement: Braided steel wire

Ideal for low-pressure steam applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum. The cover material for the ***red hose*** meets RMA (Rubber Manufacturers Association) Class C for oil resistance.

Fittings are also known as ground-joint couplings. All have NPT threads. The *1/2″* to *1″ pipe sizes* are zinc-plated steel; *1 1/4″* to *2″ pipe sizes* are zinc-plated ductile iron.

Hose— Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Suction and Discharge Water Hose

- Use with water
- Temperature Range: –10° to +130° F
- Color: Green or clear
- Hose: PVC
- Cover: PVC
- Reinforcement: Rigid PVC

Hose

Cam-and-Groove Socket

Male

Cam-and-Groove Plug

Easy-Install Female

All-PVC construction makes this hose an economical choice for both vacuum and pressure applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

Male fittings have NPSM (National Pipe Straight Mechanical) threads, which are compatible with female NPSM and NPSH threads. All are aluminum, except the 1″ and 1¼″ pipe sizes are brass.

Easy-install female fittings rotate 360° until tightened down during installation. All have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads. They're aluminum with a brass nut, except the 1″ and 1¼″ pipe sizes are all brass.

Cam-and-groove sockets and ***plugs*** come in your choice of aluminum or polypropylene. To connect, insert the plug into the socket and push the levers down.

Hose— Full coil length is 100 ft., except 6″ ID hose is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet, except 6″ ID hose has a maximum length of 50 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

★ Vacuum rating is 20″ Hg @ 72° F.

For information about hose, see page 240.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	5 5/8″	6 5/8″

■ Male fitting is aluminum; easy-install female fitting is aluminum with a brass nut.

Discharge Water Hose for Reels

Pin-Lug Fitting

- Use with water
- Temp. Range: –40° to +257° F
- Color: Black
- Hose: EPDM rubber
- Cover: EPDM rubber
- Reinforcement: Synthetic fabric

Ideal for reels—this hose won't collapse when water stops flowing. Use for general purpose washdown applications and fire emergencies. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for bend radius or vacuum.

The ***1″ ID hose*** has brass fittings with NPSH (National Pipe Straight Hose) threads. Male NPSH threads are compatible only with female NPSH threads; female NPSH threads are compatible with male NPSH, NPSM, NPT, and NPTF threads.

The ***1 1/2″*** and ***2″ ID hose*** comes with aluminum pin-lug fittings that have a brass nut and NPSM (National Pipe Straight Mechanical) threads. Male NPSM threads are compatible with female NPSM and NPSH threads; female NPSM threads are compatible with male NPSM, NPT, and NPTF threads. The *female* fittings are easy-install style; they rotate 360° until tightened down during installation.

Hose ID	Hose OD	Pipe Size	Max. psi @ 72° F	Hose Lg.	One Male and One Female Fitting	Each

Lay-Flat Discharge Water Hose

Low- (Blue) and Medium- (Red) Pressure Hose
- Use with water
- Temperature Range: –5° to +170° F
- Hose: PVC
- Cover: PVC
- Reinforcement: Polyester yarn

Medium-Pressure (White) Hose
- Use with water
- Temperature Range: –40° to +180° F
- Hose: SBR rubber
- Cover: Polyester
- Reinforcement: None

High-Pressure (Yellow) Hose
- Use with water
- Temperature Range: –5° to +200° F
- Hose: Blended PVC/Buna-N (nitrile) rubber
- Cover: Blended PVC/Buna-N (nitrile) rubber
- Reinforcement: Synthetic yarn

Hose

This hose lays flat when not in use, so it's easy to store. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for bend radius or vacuum.

The ***medium-pressure white hose*** is also known as mill hose. It resists mildew and rot.

Male fittings are aluminum (unless noted) and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with female NPSM and NPSH threads.

Easy-install female fittings rotate 360° until tightened down during installation. They are aluminum with a brass nut (unless noted) and have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose— Full coil length is 100 ft., unless noted. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

♠ Fittings are brass. ▲ Full coil length is 50 ft. ♣ Nut is aluminum.

For information about hose, see page 240.

About Fire Hose Fittings and Threads

There are two types of fire hose fittings: pin lug and rocker lug. Both lug styles provide a quick connection to hydrants, washdown equipment, and another hose. You'll need a hook-style spanner wrench to tighten these fittings (sold separately on pages 2765-2766).

There are two main types of fire hose thread. ***NH (National Hose)***, also known as ***NST (National Standard Thread)***, is the most common; it is only compatible with other NH/NST threads. ***NPSH (National Pipe Straight Hose)*** is also a popular choice; female NPSH threads are compatible with male NPSH, NPSM, NPT, and NPTF threads.

Pin-Lug Fitting

Rocker-Lug Fitting

To determine the size and type of fire hose threads you need, measure the ID or OD of your fitting and count the threads per inch, then refer to the chart.

Fire Hose Thread Selection

Fitting ID (Female)	Fitting OD (Male)	Threads Per Inch	Thread Size and Type★
0.950″	1.035″	14	3/4″ NPSH
1.192″	1.295″	11 1/2	1″ NPSH
1.224″	1.375″	8	1″ NH/NST
1.775″	1.879″	11 1/2	1 1/2″ NPSH
1.857″	1.990″	9	1 1/2″ NH/NST
2.693″	2.843″	8	2 1/2″ NPSH
2.910″	3.068″	7 1/2	2 1/2″ NH/NST
3.531″	3.623″	6	3″ NH/NST

★ *Note*: NH/NST threads are only compatible with other NH/NST threads (not compatible with NPT or NPSH threads).

Some of our fire hose adapters on page 253 have NPT threads; NPT is a pipe size, not an actual measured size. To determine pipe size, measure the inside or outside diameter of your fitting and round the measurement up to the closest ID or OD listed in the chart, then select the corresponding pipe size.

Threaded ID or OD	1 3/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″
Pipe Size (NPT)	1″	1 1/2″	2″	2 1/2″	3″

Lay-Flat Fire Hose

Hose with Rocker-Lug Fittings

- Use with water
- Temperature Range: –40° to +150° F, except High-Pressure Hose is –5° to +200° F

You don't need a lot of space to store this fire hose—it lays flat when not in use. Hose meets NFPA 1961 (National Fire Protection Association) standards. Hose interior is smooth for unrestricted flow. Not rated for bend radius or vacuum. For additional lay-flat hose, see page 251.

This hose is furnished with one male fitting and one easy-install female fitting that rotates 360° until tightened down during installation. *Brass fittings* are more durable than aluminum. *Aluminum fittings* are lighter in weight than brass.

Hose with a double cover provides better resistance to abrasion and is more durable than single-cover hose.

Lightweight Polyester-Cover Hose— Also known as pin-rack hose, this hose folds nicely and is sized to fit in a vertical rack. Hose is polyurethane with a polyester cover. FM approved. For indoor use only. Color is white.

High-Pressure Blended PVC/Buna-N (Nitrile) Rubber-Cover Hose— Lightweight yet tough, this hose is made from blended PVC/Buna-N (nitrile) rubber with a blended PVC/Buna-N rubber cover and polyester/nylon reinforcement. UL listed. Can be used indoors and out. Color is red, except 45845K57 and K58 are yellow.

Abrasion-Resistant Polyester-Cover Hose— This EPDM rubber hose has a polyester cover that provides superior abrasion resistance. Can be used indoors and out. *1 1/2″* and *2 1/2″ ID single-cover hose* and the *270 psi double-cover hose* are UL listed and FM approved. Color is white, except those marked with a ★ come in your choice of color: red, white, or yellow. **To Order:** For items marked with a ★, please specify color.

Heat-Resistant Polyester/Cotton-Cover Hose— Made from EPDM rubber with a heavy duty polyester/cotton cover, this hose provides excellent heat and mildew resistance. Can be used indoors and out. Color is tan.

For information about hose, see page 240.

Racks and Reels for Lay-Flat Fire Hose

Neatly store your lay-flat fire hose. All of these rugged steel racks and reels have a pivoting mounting bracket, which allows them to swing as the hose is released to prevent kinking, then store out of the way when not in use. Color is red.

Note: For full flow, the entire length of hose must be released from the rack or reel. Hose is not included.

Vertical Storage Rack— Use only with lightweight polyester hose (also called pin-rack hose). Hose hooks onto the rack. The mounting bracket has one 3/8″ hole and four 3/4″ × 1/2″ slots; fasteners not included.

Horizontal Storage Racks— A support (hump) in the center of the base keeps the hose evenly stacked to reduce fold stress and make hose removal easier. They have a dual mounting bracket with eight 3/8″ holes; fasteners not included.

Reels— Ideal for hose that is used frequently, reels allow quick winding and unwinding. The mounting bracket has two 3/8″ holes and two 3/8″ × 1 3/4″ slots; fasteners not included.

Covers— Protect racks and reels when not in use. Covers are made of red PVC with "Fire Hose Keep Clear" imprinted on both sides, except 6465T21 has printing on one side only.

♠ The distance the rack or reel extends from the mounting point.

Fire Hose Adapters, Hydrant Caps, and Hydrant Plugs

The NH/NST (National Hose/National Standard Thread) threads are only compatible with other NH/NST threads. Female NPSH (National Pipe Straight Hose) threads are compatible with male NPSH, NPSM, NPT, and NPTF threads. Not rated for pressure or vacuum.

Hex Fire Hose Adapters

Hex shape allows you to tighten these brass adapters with a wrench.

Also Available: Aluminum hex fire hose adapters. Please ask for 5578K1 and specify part number.

Swivel Hydrant Cap

This easy-off cap saves time in an emergency. It has an adjustable bracket that snaps into any 2 1/2″ female hose thread. To remove cap, tap the spanner lug on one end. Cap is aluminum; adjustable bracket is chrome-plated steel. Not intended to hold or seal pressure. Not rated for pressure or vacuum. UL listed.

6528T1 ..... Each $13.50

Fire Hose Nozzles & Braided Hose

For information about hose, see page 240.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown. Then, round the measurement up to the closest OD listed in the chart and select the corresponding pipe size. For example, if the threaded OD measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″
Pipe Size	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″

Fire Hose Nozzles

Use these nozzles to direct water flow when fighting a fire or in any water hose application. All nozzles have female threads. For information about fire hose threads, see page 252. For fire hose adapters that allow you to convert the thread size and style on these nozzles to one that's compatible with your equipment, please see page 253.

***A** FM-Approved Polycarbonate Spray/Stream Nozzles—*These lightweight nozzles have an easy-grip textured barrel and a rubber bumper. Turn the nozzle to adjust the water flow.

***B** Brass Compact Spray/Stream Nozzles—*The small size combined with a textured barrel makes these nozzles easy to hold. All have a rubber bumper. Turn the nozzle to adjust the water flow.

***C** UL-Listed Brass Heavy Duty Spray/Stream Nozzles—*These nozzles have an easy-grip textured barrel and a rubber bumper. Turn the nozzle to adjust the water flow.

***D&E** Quick-Flow Stream Nozzles—*There is no shut-off valve in these nozzles, so they provide instant water flow. *Style D* is brass. *Style E* is plastic.

***F** Brass Lever-Activated Stream Nozzles—*Have a rubber bumper. Turn on and off with the lever.

Braided Metal Hose

Two Male Fittings — *Two Flanges*

- Ideal for use with water; also use with air and coolants
- Temp. Range: –50° to +800° F
- Hose: Type 304 stainless steel
- Braid: Type 304 stainless steel

Also known as pump-connector hose, this economical hose is furnished with the fittings attached. It is resistant to mild vibration and can handle up to 1/8″ connection misalignment. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Carbon Steel—Has fair corrosion resistance and is more economical than stainless steel.

Type 304 Stainless Steel—Provides very good corrosion resistance.

Male fittings have NPT threads.

Flange connections are unthreaded ANSI Class 150. They connect by bolting to another flange of the same size. The flanges on the 2″ to 3″ ID hose have four bolt holes; 4″ to 6″ ID hose have eight bolt holes. All flanges are fixed.

Bronze Hose with Solder-Joint Tube Fittings

- Ideal for use with water; also use with air and refrigerants
- Temp. Range: –423° to +450° F
- Hose: Bronze
- Braid: Bronze

This bronze hose has copper socket-end (female) tube fittings attached to both ends, so it's ready for connection to copper tubing. Bronze is corrosion resistant and compatible with copper components. The bronze material is UL and C-UL recognized. This flexible hose is good for vibration applications. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 30″ Hg @ 72° F.

For information about copper solder-joint tube fittings, see page 216.

▲ Tube size is the accepted designation for copper tube fittings; it is not the actual size.

About Bend Radius and Vacuum Ratings for Hose

Bend Radius— Measured from the center point to the inside edge of the hose, this is the minimum radius you can bend a hose without damaging it or shortening its life. The smaller the bend radius, the greater the flexibility.

Vacuum Rating— Vacuum, or negative pressure, is measured in inches of mercury (Hg). The larger the number, the higher the vacuum. *Low* = 1″ to 24″ Hg; *Medium* = 25″ to 27″ Hg; *High* or *Full* = 28″ to 29.9″ Hg.

About Pressure-Rating Reductions for High-Temperature Braided Hose

The maximum pressure rating, which is listed in every presentation, is for constant pressures and even flows. For pulsating conditions, divide the max. psi rating by 2. For shock conditions with stainless steel hose, divide the max. psi rating by 6; with bronze hose, divide by 2.

When the temperature increases, the amount of pressure a hose can withstand decreases. To determine the maximum amount of pressure your hose can withstand at elevated temperatures, multiply the max. psi rating for your hose by the factors listed.

	Multiply Max. psi by	
Temperature	**Stainless Steel**	**Bronze**
100° F	1.00	0.92
200° F	1.00	0.89
400° F	0.93	0.78
800° F	0.74	N/A
1200° F	0.30	N/A

High-Temperature Braided Air and Water Hose

- Ideal for air, water, and steam; also use with ethylene glycol, fuel oil, and mineral oil
- Temperature Range: –325° to +1250° F
- Hose: Type 321 or Type 316 stainless steel
- Braid: Type 304 stainless steel

All-stainless steel construction makes this hose tough enough to handle high temperatures as well as applications involving vibration. Also good when connections are misaligned. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Type 321 stainless steel hose with Type 304 stainless steel fittings has good corrosion resistance. ***Type 316 stainless steel hose with Type 316 stainless steel fittings*** has excellent corrosion resistance.

Super-flexible hose has a better bend radius than ***flexible*** hose.

Length is measured end-to-end, including the fittings. Fittings have NPT threads. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, 72″, 96″, and 120″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

ⓘ For information about the chemical compatibility for the braided hose listed below, go to mcmaster.com and search for **5793KAC**.

A

B

C

♠ The hex nuts are carbon steel. ▲ Female unions are Type 304 stainless steel.

For information about hose, see page 255.

For information about the chemical compatibility for the braided hose on this page, go to mcmaster.com and search for **5676TAC.**

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

High-Temperature Braided Air and Water Hose with Flanged Ends

One Fixed Flange and One Easy-Install Flange

- Ideal for air, water, and steam; also use with ethylene glycol, fuel oil, and mineral oil
- Temp. Range: –20° to +950° F
- Hose: Type 321 or 316 stainless steel
- Braid: Type 304 stainless steel

Furnished with unthreaded ANSI Class 150 flanges attached, this stainless steel hose connects to another hose with the same flange size. Hose is good for applications involving vibration and when connections are misaligned. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Flanges are carbon steel. *Easy-install* flanges rotate until tightened down during installation.

Type 321 stainless steel has good corrosion resistance. ***Type 316 stainless steel*** has excellent corrosion resistance.

Length is measured end-to-end, including the flanges. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, and 72″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Also Available: Type 321 stainless steel hose with one fixed and one easy-install Type 304 stainless steel flange. Temperature range is –325° to +1250° F. Please ask for 5626K1 and specify pipe size and hose length up to 48″.

High-Temperature Braided Air and Water Hose with 37° Flared Fittings

- Ideal for air, water, and steam; also use with ethylene glycol, fuel oil, and mineral oil
- Temp. Range: –325° to +1250° F
- Hose: Type 321 or 316 stainless steel
- Braid: Type 304 stainless steel

This all-stainless steel hose comes with a male NPT threaded pipe fitting on one end and a 37° flared female tube fitting on the other. The 37° flared fittings, which are also known as JIC (Joint Industrial Council) fittings, rotate 360° until tightened down during installation; they have UNF straight threads, which are only compatible with male UNF threads. Hose is good for applications involving vibration and when connections are misaligned. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Type 321 stainless steel hose with Type 304 stainless steel fittings has good corrosion resistance. ***Type 316 stainless steel hose with Type 316 stainless steel fittings*** has excellent corrosion resistance.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, 72″, 96″, and 120″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

High-Pressure/High-Temperature Braided Air and Water Hose

- Ideal for air, water, and steam; also use with ethylene glycol, fuel oil, and mineral oil
- Temperature Range: –325° to +1250° F
- Hose: Type 321 stainless steel
- Braid: Type 321 stainless steel

With double-braid stainless steel construction, this hose has what it takes to stand up to high pressure and temperatures. Good for misaligned connections. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

Fittings are Type 304 stainless steel and have male NPT threads.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, and 48″, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	TWO MALE FITTINGS 12″ Length Each	Add'l Hose Per Inch

1 1/2″	1 1/2″	2.36″	13″	2200	5615K41 138.15	7.33

For information about bend radius and vacuum ratings for hose, see page 255.

Semiflexible High-Temperature Braided Air and Water Hose

- Use with air and water
- Temperature Range: –20° to +450° F
- Hose: Bronze
- Braid: Bronze

Two Male Fittings

One Male Fitting and One Female Union

Perfect for high-temperature applications, this bronze hose provides good corrosion resistance and is compatible with copper components. It is good for misaligned connections and anywhere vibration is a concern. The bronze material meets ASTM B508. Hose interior is ribbed. For indoor use only. Vacuum rating is 29″ Hg @ 72° F.

Male fittings are copper and have NPT threads. ***Female unions*** are brass and have NPT threads.

Length is measured end-to-end, including the fittings. Hose with fittings attached is available in lengths of 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, and 72″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total price, start with the price for the 12″ length, then add the price for each additional inch.

Coolant Hose

- Use with ethylene glycol and water
- Temp. Range: 0° to +212° F
- Color: Black w/green stripe
- Hose: Blended rubber (Buna-N/SBR)
- Cover: Blended rubber (Buna-N/neoprene)
- Reinforcement: Polyester cord

Here's a hose that is ideal for low-pressure coolant applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for bend radius or vacuum.

To Order: Please order in 5-ft. increments up to the full coil length of 25 feet.

High-Temperature Coolant Hose

- Use with ethylene glycol and water
- Temperature Range: –65° to +350° F
- Color: Blue
- Hose: Silicone rubber
- Cover: Silicone rubber
- Reinforcement: Silicone-coated polyester

Use this high-temperature hose in medium-pressure applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Standard hose meets SAE J20R1 Class A.

Kink-resistant hose is wire reinforced to prevent kinking; it will also withstand more pressure. Meets SAE J20R2 Class A. Not rated for bend radius.

To Order: Please order hose in 1-ft. increments up to the full coil length of 12 ft., except hose with a 6″ ID, which is sold in 3-ft. lengths.

Coolant Hose

For information about bend radius and vacuum ratings for hose, see page 255.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″

High-Temperature Vacuum-Rated Coolant Hose

- Use with ethylene glycol and water
- Temperature Range: –65° to +350° F
- Color: Blue
- Hose: Silicone rubber
- Cover: Silicone rubber
- Reinforcement: Polyester

Here's a great choice for high-temperature coolant applications that require vacuum. The material meets SAE J20R3 Class A. Hose interior is smooth for unrestricted flow. Can be used indoors and out. **To Order:** Please order in 5-ft. increments up to the full coil length of 50 feet.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil
1/4″	9/16″	1 3/8″	60	9.98″ Hg	5133K21	$3.39	$2.69

3/4″	1 1/16″	4 1/4″	50	6.97″ Hg	5133K25	6.20	4.90
1″	1 23/64″	5″	40	5.99″ Hg	5133K26	8.63	6.83
1 1/4″	1 37/64″	6″	40	4.99″ Hg	5133K27	12.05	9.54

Marine Coolant and Fuel Hose

- Use with diesel fuel, ethylene glycol, fuel oil, and gasoline
- Temperature Range: –20° to +212° F
- Color: Black w/yellow stripe
- Hose: Buna-N (nitrile) rubber
- Cover: Neoprene rubber
- Reinforcement: Nylon screen w/steel wire spiral

Ideal for use with coolants and fuel in marine applications, this hose is made with a specially formulated Buna-N (nitrile) rubber material that meets SAE J1527 Type A2 and USCG (United States Coast Guard) 1942F standards. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 30″ Hg @ 72° F.

To Order: Please order in 5-ft. increments up to the full coil length of 60 ft., except 1/2″ and 5/8″ ID hose, which have a full coil length of 25 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. Partial Coil	Per Ft. Full Coil

Medium-Pressure Braided Coolant Hose

- Use with ethylene glycol and water
- Temperature Range: 5° to 230° F
- Hose: EPDM rubber
- Braid: Type 304 stainless steel

A Type 304 stainless steel braid gives this rubber hose the strength to handle more pressure than coolant hose without a braid. Length is measured end-to-end, including the fittings. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are brass and have NPT threads.

Easy-install female fittings rotate 360° until tightened down during installation. They're brass and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with male NPSM, NPT, and NPTF threads.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	ONE MALE AND ONE EASY-INSTALL FEMALE FITTING 12″ Length	Each	18″ Length	Each	24″ Length	Each	30″ Length	Each	36″ Length	Each

High-Pressure Braided Coolant Hose

Two Male Fittings

One Male and One Female Union

- Use with air and ethylene glycol; not for use with water
- Temperature Range: –20° to +250° F
- Hose: Carbon steel
- Braid: Galvanized steel

Able to withstand more pressure than any other coolant hose we offer, this hose is ideal for when connections are misaligned. Hose interior is ribbed. For indoor use only. Vacuum rating is 29″ Hg @ 72° F.

Length is measured end-to-end, including the fittings. Fittings are carbon steel and have NPT threads. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, 72″, and 96″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	TWO MALE FITTINGS 12″ Length	Each	ONE MALE AND ONE FEMALE UNION 12″ Length	Each	Add'l Hose Per Inch

For information about bend radius and vacuum ratings for hose, see page 255.

For information about the chemical compatibility for the chemical hose on this page, go to mcmaster.com and search for **5395KAC**.

High-Temperature Coolant-Hose Elbows

- Use with ethylene glycol and water
- Temperature Range: –65° to +500° F
- Color: Blue
- Hose: Silicone rubber
- Cover: Silicone rubber
- Reinforcement: Polyester

Connect two lengths of coolant hose with these 90° elbows—they'll stand up to your high-temperature applications. Attach to the hose using a Worm-Drive Clamp for Soft Hose (sold separately; see page 276). The silicone material meets SAE J20R1 Class A. Interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

For Hose ID	For Hose OD	Lg. (A)	Lg. (B)	Max. psi @ 72° F		Each

Chemical Hose

- Use with acetone, ethylene glycol, and mineral oil
- Temperature Range: –25° to +150° F
- Color: Green w/green stripe
- Hose: Cross-linked polyethylene
- Cover: EPDM rubber
- Reinforcement: Synthetic fabric with wire spiral

Hose

The specially formulated polyethylene material allows this hose to handle a wide range of chemicals. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Cam-and-groove sockets and ***plugs*** come in your choice of two materials: *aluminum,* which has good corrosion resistance; and *Type 316 stainless steel,* which has excellent corrosion resistance. To connect, insert the plug into the socket and push the levers down.

Cam-and-Groove Socket

Hose— Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

♣ Socket has one lever.

High-Temperature/Medium-Pressure Chemical Hose

- Use with ethylene glycol, isopropyl alcohol, and mineral oil
- Temperature Range: –40° to +350° F
- Color: Green w/yellow stripe
- Hose: FEP (fluorinated ethylene propylene)
- Cover: EPDM rubber
- Reinforcement: Synthetic fabric with wire spiral

Hose

Not only will this hose stand up to chemicals at high temperatures, the FEP material is also FDA (food) compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29.9″ Hg @ 72° F.

Fittings come in your choice of two materials: *carbon steel,* which is economical but has poor corrosion resistance; and *Type 316 stainless steel,* which has excellent corrosion resistance. All have male NPT threads.

Hose— Full coil length is 50 ft. **To Order:** Please order in 1-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 1-, 2-, 3-, 4-, 5-, 10-, 15-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Crush-Resistant Chemical Hose

Hose

Cam-and-Groove Socket

Cam-and-Groove Plug

- Use with acetone, ethylene glycol, and mineral spirits
- Temp. Range: –40° to +180° F
- Color: Green w/red stripe
- Hose: Polyethylene
- Cover: EPDM rubber
- Reinforcement: Fabric with plastic spiral

Multilayer construction allows this super-tough hose to bounce right back after being stepped on or even run over by a forklift. This hose is also good for tight spaces where bending is required. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Cam-and-groove sockets and ***plugs*** are Type 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Hose—Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)—Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 ft. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Extra-Flexible Chemical Hose

Hose

Male

Cam-and-Groove Socket

Cam-and-Groove Plug

- Use with acetone, ethylene glycol, and isopropyl alcohol
- Temp. Range: –40° to +220° F
- Color: Purple w/yellow stripe
- Hose: EPDM rubber
- Cover: EPDM rubber
- Reinforcement: Synthetic fabric with wire spiral

Here's the most flexible chemical hose we offer. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Male fittings are Type 316 stainless steel and have NPT threads.

Cam-and-groove sockets and ***plugs*** are Type 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Hose—Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)—Assembled in lengths of 5-, 10-, 15-, 20-, or 25-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Flexible Chemical Hose

- Use with acetone, ethylene glycol, and vegetable oil
- Color: Green
- Temperature Range: –40° to +140° F
- Hose: Layered polypropylene and polyester
- Cover: PVC-coated nylon
- Reinforcement: Internal polypropylene-coated steel spiral and external galvanized steel spiral

Also known as composite hose, multiple layers of polypropylene and polyester are sandwiched between two wire spirals—this unique construction provides high chemical resistance and extra flexibility. The hose interior is ribbed due to the internal wire; the external wire also acts as a wear strip. Hose is furnished with two male fittings attached; the fittings are Type 304 stainless steel and have NPT threads. Can be used indoors and out; the hose material meets USCG (United States Coast Guard) 154-500 standards for marine applications. Vacuum rating is 29.9″ Hg @ 72° F.

Economical Chemical Hose

- Use with lacquer and paint
- Temperature Range: –30° to +160° F
- Color: Red
- Hose: Nylon
- Cover: Blended vinyl/Buna-N (nitrile) rubber
- Reinforcement: Synthetic braid

Hose

Male

Cam-and-Groove Socket

Cam-and-Groove Plug

Here is the most economical chemical hose we offer. Hose material meets RMA (Rubber Manufacturers Association) Class B for oil resistance. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Male fittings are Type 316 stainless steel and have NPT threads.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose—Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)—Assembled in lengths of 5-, 10-, 15-, 20-, or 25-ft., or any length you choose up to 50 ft. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Build-Your-Own High-Pressure Braided Chemical Hose

- Use with ethylene glycol, mineral oil, and toluene; not for use with fuel oil or gasoline
- Temperature Range: –65° to +400° F
- Hose: PTFE
- Braid: Type 304 stainless steel

Hose and fittings are sold separately. Just cut the hose to length and attach the fittings—no special equipment required.

Note: After attaching the fittings, hose should be tested for required pressure before use.

Hose

Hose material is FDA (food) compliant. Ideal for applications involving continuous flexing and vibration. Hose interior is smooth and nonsticking. Can be used indoors and out.

To Order: Please order in 1-ft. increments up to the maximum continuous length of 100 ft.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F		Per Ft. 1-24	Per Ft. 25-Up

Chemical Hose

For information about bend radius and vacuum ratings for hose, see page 255.

For information about the chemical compatibility for the chemical hose on this page, go to mcmaster.com and search for **5830KAC**.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

High-Pressure Braided Chemical Hose with Abrasion-Resistant Cover

One Male and One Easy-Install Male Fitting

Two 37° Flared Female Fittings

- Use with acetone, isopropyl alcohol, and mineral oil; not for use with fuel oil or gasoline
- Temperature Range: –65° to +275° F
- Color: Blue
- Hose: PTFE
- Cover: Blended rubber/plastic
- Braid: Type 304 SS

Go ahead and drag this high-pressure hose—the blended rubber/plastic cover provides excellent resistance to abrasion. Use this hose to transfer chemicals at high pressures as well as for applications involving continuous flexing and vibration. The PTFE hose material is FDA (food) compliant. Hose interior is smooth and nonsticking for unrestricted flow. Can be used indoors and out.

Male fittings come in brass or Type 303 stainless steel. All have NPT threads.

Easy-install male fittings come in brass or Type 316 stainless steel. All have NPT threads and rotate 360° until tightened down during installation.

37° flared female fittings are also known as JIC (Joint Industrial Council) fittings. They come in brass or Type 303 stainless steel. All have UNF straight threads, which are compatible only with male UNF threads, and rotate 360° until tightened down during installation.

Brass offers good corrosion resistance. ***Type 303 stainless steel*** has very good corrosion resistance. ***Type 316 stainless steel*** has excellent corrosion resistance.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, and 72″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Pipe/ Thread Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F	BRASS FITTINGS 12″ Length	Each	STAINLESS STEEL FITTINGS 12″ Length	Each	Add'l Hose Per Inch

High-Pressure Static-Dissipative Braided Chemical Hose

- Use with acetone, diesel fuel, fuel oil, isopropyl alcohol, mineral oil, and steam
- Temperature Range: –65° to +450° F
- Hose: Conductive PTFE
- Braid: Type 304 stainless steel

This PTFE hose is blended with carbon black, so it dissipates static when used in a grounded system. Use this hose to transfer chemicals and fuel at high pressures as well as for applications involving continuous flexing and vibration. Hose interior is smooth and nonsticking for unrestricted flow. Can be used indoors and out.

Male fittings have NPT threads.

Easy-install male fittings have NPT threads and rotate 360° until tightened down during installation.

Brass offers good corrosion resistance. ***Type 303 stainless steel*** has very good corrosion resistance.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, 72″, 96″, 120″, and 144″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Extra-Flexible High-Pressure Braided Chemical Hose

- Use with acetone, ethylene glycol, and mineral oil; not for use with fuel oil or gasoline
- Temperature Range: –65° to +400° F
- Hose: PTFE
- Braid: Type 304 stainless steel

Two Male Fittings

Two 37° Flared Female Fittings

Spiral hose construction provides a better bend radius and more flexibility than other braided hose. Good for applications involving continuous flexing and vibration. The PTFE hose material is FDA (food) compliant. Hose interior is smooth and nonsticking for unrestricted flow. Can be used indoors and out.

Male fittings have NPT threads.

37° flared female fittings, which are also called JIC (Joint Industrial Council) fittings, have UNF straight threads that are compatible only with male UNF threads. Fittings rotate 360° until tightened down during installation.

Zinc-plated steel has fair corrosion resistance. ***Type 316 stainless steel*** has excellent corrosion resistance.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, 48″, 54″, 60″, 66″, 72″, and 96″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Pipe/ Thread Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Vacuum @ 72° F	ZINC-PLATED STEEL FITTINGS 12″ Length	Each	TYPE 316 SS FITTINGS 12″ Length	Each	Add'l Hose Per Inch

For information about bend radius and vacuum ratings for hose, see page 255.

For information about the chemical compatibility for the chemical hose on this page, go to mcmaster.com and search for **5616KAC**.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round the measurement up to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″

Lightweight High-Strength Braided Chemical Hose

Two Male Fittings

One Male and One Easy-Install Male Fitting

- Use with acetone, ethylene glycol, and mineral oil; not for use with fuel oil or gasoline
- Temperature Range: –65° to +275° F
- Hose: PTFE
- Braid: Fiberglass

Strong enough to withstand continuous flexing, this lightweight hose is nonconductive for use in static-control and electrical-isolation applications. The PTFE hose material is FDA (food) compliant. Hose interior is smooth and nonsticking for unrestricted flow. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

Fittings are Type 303 stainless steel and have NPT threads. *Easy-install* fittings rotate 360° until tightened down during installation.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, and 48″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	TWO MALE FITTINGS 12″ Length	Each	ONE MALE AND ONE EASY-INSTALL MALE FITTING 12″ Length	Each	Add'l Hose Per Inch
1/8″	3/16″	5/16″	2 1/2″	800	5616K51	$24.60	5616K61	$34.65	$0.24

High-Pressure Braided Chemical Hose with Precision 37° Flared Fittings

One Male and One 37° Flared Male Fitting

One Male and One 37° Flared Female Fitting

- Use with acetone, ethylene glycol, and mineral oil; not for use with fuel oil or gasoline
- Temperature Range: –65° to +450° F
- Hose: PTFE
- Braid: Type 304 SS

This high-pressure hose comes with a threaded male pipe fitting on one end and a precision 37° flared tube fitting on the other. Ideal for applications involving continuous flexing and vibration. The hose meets SAE 100R14 standards. The PTFE hose material is FDA (food) compliant. Hose interior is smooth and nonsticking for unrestricted flow. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

Male fittings are Type 303 stainless steel and have NPT threads.

37° flared male and ***female fittings*** are Type 304 stainless steel and have 3A or 3B threads that adhere to higher tolerances than other types of threads. They rotate 360° until tightened down during installation. *Male fittings* are made to exact AS (formerly AN) specifications; *female fittings* meet the pressure and sealing capabilities of the AS specification and are compatible with male fittings that meet the AS specification.

Length is measured end-to-end, including the fittings. Available in 12″, 18″, 24″, 30″, 36″, 42″, and 48″ lengths, or any length you choose. **To Order:** Please specify the part number for the 12″ length along with the total length you need. To determine your total cost, begin with the base price for the 12″ length, then add the price for each additional inch.

Pipe Size	Thread Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	ONE MALE AND ONE 37° Flared MALE FITTING 12″ Length	Each	ONE MALE AND ONE 37° Flared FEMALE FITTING 12″ Length	Each	Add'l Hose Per Inch

Heated Braided Chemical Hose

Hose with Two Male Fittings

Temperature Controller

- Use with adhesives and paraffin wax
- Temperature Range: 50° to 450° F
- Color: Black
- Hose: PTFE
- Cover: Braided polyester
- Braid: Type 304 stainless steel

Ideal for materials that need heat in order to flow, simply plug this hose into the temperature controller and the nickel-alloy heating element will keep the interior warm. Hose includes a 6-ft. shielded power cord with an electrical connector that plugs into the temperature controller; the controller (sold separately) is required. Hose has a smooth, nonsticking interior for unrestricted flow; the exterior is laminated with silicone rubber and encased in a braided polyester cover. For indoor use only. Not rated for vacuum.

Male fittings are Type 303 stainless steel and have NPT threads.

37° flared female fittings are also called JIC (Joint Industrial Council) fittings; they rotate 360° until tightened down during installation. They are Type 303 stainless steel and have UNF straight threads, which are compatible only with male UNF threads.

Hose is furnished with the fittings attached and is available in 2-, 4-, 6-, 8-, 10-, and 12-ft. lengths, or any length you choose in 1-ft. increments up to 25 feet. **To Order:** Please specify the part number for the 2-ft. length along with the total length you need. To determine your total cost, begin with the base price for the 2-ft. length, then add the price for each additional foot.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	Watts per ft.	TWO MALE FITTINGS Pipe Size	2-ft. Length	Each	TWO 37° FLARED FEMALE FITTINGS Thread Size	2-ft. Length	Each	Add'l Hose Per Ft.

Temperature Controller— Has a temperature-adjustment dial, an electrical connector for attaching to hose, and an 8-ft. power cord with three-prong plug. Operates on 120 VAC. Temperature range is 50° to 450° F (accuracy is ±3° F of set temperature).

5565K71 ..... Each $452.86

For information about bend radius and vacuum ratings for hose, see page 255.

For information about the chemical compatibility for the petroleum hose on this page, go to mcmaster.com and search for **54605KAC**.

Hose for Paint Spray Systems

Air Hose
- Temp. Range: –40° to +200° F
- Color: Red
- Hose: EPDM
- Cover: EPDM
- Reinforcement: Synthetic braid

Paint Hose for Air-Operated Systems
- Temperature Range: 0° to +190° F
- Color: Black
- Hose: Nylon
- Cover: Synthetic rubber
- Reinforcement: Braided synthetic yarn

Paint Hose for Airless Systems
- Temperature Range: 0° to +200° F
- Color: Blue
- Hose: Nylon
- Cover: Polyurethane
- Reinforcement: High-tensile polyester

Paint Hose

Specially designed for use with paint-spraying systems, this hose has a smooth interior for unrestricted flow. Hose is furnished with two easy-install female fittings attached that rotate 360° until tightened down during installation. *Air hose* has fittings with NPSM (National Pipe Standard Mechanical) threads, except 7859T122 and T125 have NPSH (National Pipe Standard Hose) threads. All *paint hose* has fittings with NPSH threads. Female NPSM threads are compatible with male NPSM, NPT, and NPTF threads. Female NPSH threads are compatible with male NPSH, NPSM, NPT, and NPTF threads. Hose is not rated for vacuum.

Hose for Air-Operated Paint-Spray Systems— For systems that have separate hoses for air and paint. *Air hose* has brass fittings and is for indoor use only. *Paint hose* has zinc-plated steel fittings and spring guards; hose can be used indoors and out.

Hose for High-Pressure Airless Paint-Spray Systems— For systems that use a single hose. Hose has zinc-plated steel fittings and spring guards; hose can be used indoors and out.

Petroleum Hose

- Use with diesel fuel, fuel oil, gasoline with up to 15% ethanol, and hydraulic oil
- Color: Black
- Temperature Range: –40° to +212° F
- Hose: Buna-N (nitrile) rubber
- Cover: Blended Buna-N rubber/PVC
- Reinforcement: Spiral steel wire

Hose

Male

Easy-Install Female

Cam-and-Groove Socket

Cam-and-Groove Plug

With rugged Buna-N and wire construction, this hose is durable enough to handle gasoline and other petroleum-based products. Hose interior is smooth for unrestricted flow. Can be used indoors and out.

Male fittings are brass and have NPSM threads, unless noted.

Easy-install female fittings rotate 360° until tightened down during installation. They are brass and have NPSM threads, unless noted.

Male NPSM (National Pipe Straight Mechanical) threads are compatible with female NPSM and NPSH (National Pipe Straight Hose) threads. Male NPSH threads are compatible only with female NPSH threads. Female NPSM threads are compatible with male NPSM, NPT, and NPTF threads. Female NPSH threads are compatible with male NPSH, NPSM, NPT, and NPTF threads.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose— Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Also Available: Hose that comes with two male fittings attached. Please ask for 5282K1 and specify hose ID (3/4″, 1″, 1 1/4″, 1 1/2″, or 2″) and hose length (5-, 10-, 15-, 20-, or 25-ft.)

Low-Pressure SAE Fuel Hose

- Use with diesel fuel and gasoline with up to 15% ethanol
- Temperature Range: –29° to +257° F
- Color: Black
- Hose: Buna-N (nitrile) rubber
- Cover: Blended Buna-N rubber/PVC
- Reinforcement: Polyester yarn spiral

Designed for inline connecting of fuel lines, this hose meets SAE 30R7 standards. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 24″ Hg @ 72° F.

To Order: Please order in 5-ft. increments up to the full coil length of 100 feet.

Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F		Per Ft. Partial Coil	Full Coil

Petroleum Hose

For information about bend radius and vacuum ratings for hose, see page 255.

For information about the chemical compatibility for the petroleum hose on this page, go to mcmaster.com and search for **56315KAC**.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″

Flexible Petroleum Hose

Male Fitting

Cam-and-Groove Plug

Cam-and-Groove Socket

- Use with diesel fuel, fuel oil, and gasoline with up to 15% ethanol
- Temperature Range: -40° to +212° F
- Color: Brown with white stripe
- Hose: Blended polypropylene/polyester
- Cover: PVC-coated fabric
- Reinforcement: Internal and external galvanized steel wire spirals

Also known as composite hose, multiple layers of polypropylene and polyester are sandwiched between exposed internal and external wires—this unique construction makes for a petroleum hose that's flexible and lightweight. Hose interior is ribbed. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Male fittings are steel and have NPT threads. Maximum pressure is 200 psi @ 72° F.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down. Maximum pressure is 150 psi @ 72° F.

Extra-Flexible Petroleum Hose

Petroleum Hose

Petroleum Hose with Male Fitting

Petroleum Hose with Easy-Install Female Fitting

Petroleum Hose
- Use with diesel fuel and gasoline with up to 15% ethanol
- Temperature Range: –35° to +200° F
- Color: Black with red stripe
- Hose: Buna-N (nitrile) rubber
- Cover: Blended Buna-N/PVC
- Reinforcement: Synthetic fabric with a wire spiral

Fuel Oil Hose
- Use with fuel oil and kerosene
- Temperature Range: –40° to +140° F
- Color: Red
- Hose: Buna-N (nitrile) rubber
- Cover: Blended Buna-N/PVC
- Reinforcement: Synthetic braid

Biodiesel Hose
- Use with biodiesel, diesel fuel, ethanol, and gasoline with up to 15% ethanol
- Temperature Range: –30° to +180° F
- Color: Black
- Hose: Synthetic rubber
- Cover: Synthetic rubber
- Reinforcement: Spiral-plied synthetic fabric with wire

Here's the most flexible petroleum hose we offer. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F, except fuel oil hose is not rated for vacuum.

Male fittings have NPT threads. They are zinc-plated steel, except the fittings on the fuel oil hose are brass.

Easy-install female fittings rotate 360° until tightened down during installation. They are zinc-plated steel with NPSM (National Pipe Straight Mechanical) threads, except the fittings on the fuel oil hose are brass with NPSH (National Pipe Straight Hose) threads. Female NPSM threads are compatible with male NPSM, NPT, and NPTF threads; female NPSH threads are compatible with male NPSH, NPSM, NPT, and NPTF threads.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

For information about bend radius and vacuum ratings for hose, see page 255.

For information about the chemical compatibility for the petroleum, gasoline, and fuel hose on this page, go to mcmaster.com and search for **5161KAC**

Lay-Flat Petroleum Hose

- Use with diesel fuel and petroleum-based oil
- Temperature Range: –20° to +176° F
- Color: Green
- Hose: Blended polyurethane elastomer
- Cover: Blended polyurethane elastomer
- Reinforcement: Woven polyester

A lay-flat design makes this hose easier to store, handle, and transport. The specially blended polyurethane elastomer material meets MIL-PRF-370J. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose— Full coil length is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, or 25-ft., or any length you choose up to 50 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

UL Listed Gasoline and Fuel Hose

- Use with diesel fuel, fuel oil, and gasoline with up to 15% ethanol
- Temperature Range: –40° to +140° F
- Color: Black
- Hose: Buna-N (nitrile) rubber
- Cover: Blended Buna-N/PVC
- Reinforcement: Braided synthetic yarn with static-control wire

Use this UL listed hose for transferring gasoline and fuel oil. A static-control wire provides an escape route for electrostatic buildup. Hose interior is smooth for unrestricted flow. Hose is furnished with the fittings attached; fittings are die cast zinc and have male NPT threads. Can be used indoors and out. Not rated for vacuum.

SAE Hydraulic Hose

- Use with hydraulic fluid
- Temperature Range: –40° to +212° F
- Color: Black
- Hose: Buna-N (nitrile) rubber
- Cover: Synthetic rubber
- Reinforcement: Braided wire

Hose

This hose is SAE rated for use in hydraulic applications. Hose interior is smooth for unrestricted flow. Can be used indoors and out.

Medium-pressure hose meets SAE 100R1-AT. Use this hose only with Parker Series 42 fittings (see 52305K on page 295 for Series 42 fittings that are sold individually). Vacuum rating is 24″ Hg @ 72° F.

High-pressure hose meets SAE 100R2-AT. Use this hose only with Parker Series 30 fittings (see 52305K on page 295 for Series 30 fittings that are sold individually). Vacuum rating is 28″ Hg @ 72° F, except hose with ¾″ and 1″ ID is rated 24″ Hg @ 72° F.

Note: The integrity of the SAE rating is dependent upon the use of hose, fittings, and components that meet SAE requirements and also upon using proper assembly methods. It is the responsibility of the consumer to test and monitor the hose and fittings to ensure they are appropriate for the intended applications.

Male Fitting

Male fittings are zinc-plated steel and have NPT threads.

37° flared female fittings are also known as JIC (Joint Industrial Council) fittings. They are zinc-plated steel and have UNF threads, which are compatible only with male UNF threads. They rotate 360° until tightened down during installation. See page 182 for steel UNF-to-NPTF thread adapters.

37° Flared Female Fitting

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 1-, 1½-, 2-, 2½-, 3-, 4-, 5-, or 6-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

For information about bend radius and vacuum ratings for hose, see page 255.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″

Lightweight SAE Hydraulic Hose

Hose

Male

37° Flared Female

- Use with hydraulic fluid
- Temperature Range: –40° to +212° F
- Color: Black
- Hose: Nylon
- Cover: Polyurethane
- Reinforcement: Fiber braid

Lightweight and chemical resistant, this hose meets SAE 100R7. Use with Parker Series 55 fittings, except the hose with 1/8″ ID is for use with Parker Series 57 fittings. See 5243K on page 295 for Series 55 fittings sold individually. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

Note: The integrity of the SAE rating is dependent upon the use of hose, fittings, and components that meet SAE requirements and also upon using proper assembly methods. It is the responsibility of the consumer to test and monitor the hose and fittings to ensure they are appropriate for the intended applications.

Male fittings are zinc-plated steel and have NPT threads.

37° flared female fittings are also known as JIC (Joint Industrial Council) fittings. They are zinc-plated steel and have UNF threads, which are compatible only with male UNF threads. These fittings rotate 360° until tightened down during installation.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 1-, 1 1/2-, 2-, 2 1/2-, 3-, 4-, 5-, or 6-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Also Available: Hose with one male and one 37° flared female fitting attached. Please ask for 5201K1 and specify hose ID (1/8″, 1/4″, 3/8″, or 1/2″) and hose length (2-, 3-, 4-, or 6-ft.).

Flame-Resistant SAE Hydraulic Hose

Male

37° Flared Female

- Use with hydraulic fluid
- Temperature Range: –40° to +212° F
- Color: Black
- Hose: Buna-N (nitrile) rubber
- Cover: Synthetic rubber
- Reinforcement: Two steel wire braids

Meeting MSHA (Mine Safety and Health Administration) 2G standards for flame resistance, this hose also meets SAE 100R2-AT standards and EN 853 2SN (formerly DIN 200222SN). Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Hose is furnished with the fittings attached. Fittings are carbon steel. ***Male fittings*** have NPT threads. ***37° flared female fittings*** are also known as JIC (Joint Industrial Council) fittings; they have UNF threads, which are compatible only with male UNF threads, and rotate 360° until tightened down during installation.

Low-Pressure SAE Hydraulic Hose

- Use with hydraulic fluid
- Temperature Range:
  SAE 30R2 and 30R3: –40° to +200° F;
  SAE 100R4: –40° to +212° F
- Color: Black
- Hose:
  SAE 30R2 and 100R4: Buna-N rubber
  SAE 30R3: Synthetic rubber
- Cover:
  SAE 30R2 and 30R3: Synthetic rubber;
  SAE 100R4: Blended Buna-N rubber/PVC
- Reinforcement:
  SAE 30R2 and 30R3: Polyester braid;
  SAE 100R4: Spiral textile cords with four steel wire spirals

SAE rated for low-pressure applications, this hose is ideal for connecting inline hydraulic-fluid lines. Hose interior is smooth for unrestricted flow. Can be used indoors and out.

SAE 30R2 hose is not rated for vacuum. Vacuum rating for ***SAE 30R3*** is 20″ Hg @ 72° F; for ***SAE 100R4*** is 29″ Hg @ 72° F.

To Order: Please order in 5-ft. increments up to the full coil length of 100 ft.

For information about bend radius and vacuum ratings for hose, see page 255.

Clear Dry-Food Hose

- Use with dry food products
- Temperature Range: –4° to +150° F
- Color: Clear
- Hose: PVC
- Cover: PVC
- Reinforcement: PVC spiral

Hose with Static Wire

Clear hose allows you to visually monitor flow. The hose material is FDA CFR21 170-199 and USDA compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out.

Hose with Static-Control Wire— Just crimp a grounding wire to the static-control wire that's built into this hose and you'll create an escape route for electrostatic buildup.

Cam-and-groove sockets and ***plugs*** come in your choice of *aluminum,* which are lightweight with good corrosion resistance, and *Type 316 stainless steel,* which have excellent corrosion resistance. To connect, insert the plug into the socket and push the levers down. *Note:* Fittings do not meet the standards shown for the hose material.

Hose— **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to the full coil length. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Abrasion-Resistant Dry-Food Hose

- Use with dry food products
- Temperature Range: –40° to +180° F
- Color: Tan
- Hose: Gum rubber
- Cover: SBR rubber
- Reinforcement: Synthetic fabric with a wire spiral

Hose

Resistant to cuts, tears, and abrasion, this rubber hose is the most durable dry-food hose we offer. The hose material is FDA CFR21 177.2600 compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down. *Note:* Fittings do not meet the standards shown for the hose material.

Hose— Full coil length is 100 ft. **To Order:** Please order in 1-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Extra-Flexible Wet-Food Hose

- Use with liquid food products
- Temperature Range: –30° to +200° F
- Color: Gray
- Hose: Buna-N (nitrile) rubber
- Cover: Blended Buna-N/PVC
- Reinforcement: Two-ply polyester cord and two steel wire spirals

Hose

A corrugated cover makes this hose super flexible. The hose material is FDA and USDA compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 30″ Hg @ 72° F.

Cam-and-groove sockets and ***plugs*** are Type 316 stainless steel. To connect, insert the plug into the socket and push the levers down. *Note:* Fittings do not meet the standards shown for the hose material.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Food Hose

For information about bend radius and vacuum ratings for hose, see page 255.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 2 3/16″, the next highest OD is 2 3/8″ and the corresponding pipe size is 2″.

Threaded OD or ID	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″
Pipe Size	1 1/2″	2″	2 1/2″	3″	4″

Clear Wet- and Dry-Food Hose

Hose

Cam-and-Groove Socket

Cam-and-Groove Plug

Sanitary Fitting

- Use with liquid and dry food products
- Temperature Range: –15° to +158° F
- Color: Clear with clear or white spiral
- Hose: PVC
- Cover: PVC
- Reinforcement: PVC spiral

Clear PVC construction allows you to see the flow. The PVC hose material meets 3-A sanitary standard requirements and is FDA and USDA compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F. *Note:* Fittings do not meet the standards shown for the hose material, unless stated otherwise.

Cam-and-groove sockets and ***plugs*** are Type 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Sanitary fittings are Type 304 stainless steel. They're also known as tri-clamps; they connect with a sanitary clamp (sold separately on page 208). These fittings meet 3-A sanitary standard requirements.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

High-Pressure Wet-Food Hose

Hose

Cam-and-Groove Socket

Cam-and-Groove Plug

- Use with liquid food products
- Temp. Range: –30° to +212° F
- Color: Orange
- Cover: Buna-N (nitrile) rubber
- Hose: Buna-N (nitrile) rubber
- Reinforcement: Polyester cord with Buna-N (nitrile) rubber coating

Also known as brewer's and vintner's hose, the hose material is FDA (food) compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out.

Cam-and-groove sockets and ***plugs*** are Type 316 stainless steel. To connect, insert the plug into the socket and push the levers down. *Note:* Fittings do not meet the standards shown for the hose material.

Hose— 4″ ID hose is not rated for vacuum. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to the full coil length. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Wet-Food Hose with Abrasion-Resistant Cover

Hose

Sanitary Fitting

- Use with liquid food products
- Temp. Range: –40° to +225° F
- Color: Gray with blue stripe
- Hose: Butyl rubber
- Cover: EPDM rubber
- Reinforcement: Steel wire spiral and two nylon braids

An EPDM rubber cover protects this hose from external abrasion. The hose and the fittings meet 3-A sanitary standard requirements. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Sanitary fittings are Type 316L stainless steel. They're also known as tri-clamps; they connect with a sanitary clamp (sold separately on page 208).

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 2-, 3-, 4-, 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

For information about bend radius and vacuum ratings for hose, see page 255.

Extreme-Temperature Wet-Food Hose

- Use with liquid food products
- Temperature Range: –65° to +350° F
- Color: Translucent white
- Hose: Peroxide-cured silicone
- Cover: Peroxide-cured silicone
- Reinforcement: Polyester braid

Hose

Sanitary Fitting

This hose has the widest temperature range of all our wet-food hose. The hose material meets NSF 51 standards and is FDA CFR21 177.2600 and USDA compliant. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for vacuum. *Note:* Fittings do not meet the standards shown for the hose material.

Sanitary fittings are Type 316 stainless steel. They're also known as tri-clamps; they connect with a sanitary clamp (sold separately on page 208). These fittings meet 3-A sanitary standard requirements.

Hose— Full coil length is 100 ft., except hose with 1″ ID is 50 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, or 20-ft., or any length you choose up to the full coil length. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Ultrasmooth-Interior Wet-Food Hose

- Use with liquid food products
- Temperature Range: Standard: –25° to +212° F; High-Temperature: –25° to +250° F
- Hose: Blended Buna-N rubber/PVC
- Cover: Blended Buna-N rubber/PVC
- Reinforcement: Synthetic fabric with a wire spiral

Hose

Cam-and-Groove Socket

Sanitary Fitting

Cam-and-Groove Plug

A special manufacturing process leaves the interior of this hose ultrasmooth to prevent buildup. The hose material meets 3-A sanitary standard requirements and is FDA CFR21 177.2600 and USDA compliant. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F. *Note:* Fittings do not meet the standards shown for the hose material, unless stated otherwise.

Cam-and-groove sockets and ***plugs*** are Type 316 stainless steel. To connect, insert the plug into the socket and push the levers down.

Sanitary fittings are Type 304 stainless steel. Also known as tri-clamps, they connect with a sanitary clamp (sold separately on page 208). Meet 3-A sanitary standard requirements.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Clear Dry-Material Hose

- Use with plastic pellets and powders
- Temperature Range: –4° to +150° F
- Color: Clear
- Hose: Polyurethane
- Cover: PVC
- Reinforcement: None

Hose

Cam-and-Groove Socket

Male

Cam-and-Groove Plug

Easy-Install Female

The polyurethane hose material provides better internal abrasion resistance than PVC, plus it's FDA CFR21 1177.2600 and USDA compliant. Hose has a clear construction that allows you to monitor flow. Interior is smooth for unrestricted flow. Can be used indoors and out. Vacuum rating is 29″ Hg @ 72° F.

Male fittings are aluminum and have NPSM (National Pipe Straight Mechanical) threads, which are compatible with female NPSM and NPSH threads.

Easy-install female fittings rotate 360° until tightened down during installation. They are aluminum and have NPSM threads, which are compatible with male NPSM, NPT, and NPTF threads.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose— Full coil length is 60 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 60 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Dry-Material & Natural and LP Gas Hose

For information about bend radius and vacuum ratings for hose, see page 255.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″

Antistatic Clear Dry-Material Hose

Hose

Cam-and-Groove Socket

Cam-and-Groove Plug

- Use with plastic pellets and powders
- Temperature Range: –4° to +150° F
- Color: Clear
- Hose: PVC
- Cover: PVC
- Reinforcement: PVC spiral

Made from a specially formulated PVC material, this hose will dissipate static buildup when used in a fully grounded system. The clear construction allows you to monitor flow. The reinforcement is on the outside, so it doubles as a wear strip. Hose material is FDA CFR21 170-199 and USDA compliant. Interior is smooth for unrestricted flow. Can be used indoors and out.

Cam-and-groove sockets and ***plugs*** are aluminum. To connect, insert the plug into the socket and push the levers down.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Please specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Abrasion-Resistant Dry-Material Hose

Hose

Sandblast Quick Coupling

- Use with abrasive materials, sand, crushed glass, and steel shot
- Temp. Range: –22° to +176° F
- Color: Black
- Hose: Gum rubber
- Cover: Blended SBR/natural rubber
- Reinforcement: Polyester cord

Also called sandblast hose, this tough rubber hose can handle highly abrasive materials. Hose interior is smooth for unrestricted flow. Can be used indoors and out. Not rated for bend radius or vacuum.

Sandblast quick couplings are aluminum. *Note:* These fittings are unique to this hose and application.

Hose— Full coil length is 100 ft. **To Order:** Please order in 5-ft. increments up to the full coil length.

Fittings (Attached to the Hose)— Assembled in lengths of 5-, 10-, 15-, 25-, or 50-ft., or any length you choose up to 100 feet. **To Order:** Specify the part number for the set of fittings and your desired hose length. To determine your total price, add the price of the hose to the price of the set of fittings.

Natural and Liquefied-Petroleum Gas Hose

One Male and One Female Fitting

- Temperature Range: -40° to +800° F
- Hose: Type 304 stainless steel
- Braid: None

Designed for use with natural and liquefied petroleum (LP) gas, this hose comes with the fittings attached. Hose interior is ribbed. Can be used indoors and out. Not rated for vacuum.

For Natural and Liquefied-Petroleum Gas

This hose meets CSA/ANSI LC1 and LC1b 2005, as well as CSA 6.26 and 6.26b 2005 standards. Furnished with brass male NPT fittings that include a silicone O-ring and a graphite gasket. Maximum pressure is 5 psi @ 72° F. Installation instructions are included.

For Natural and Liquefied-Petroleum Gas Appliances

Hook up dryers and ranges to your gas supply—this flexible hose is furnished with special appliance fittings that meet ANSI Z2.24a 2002 and CSA 6a.10 2002 standards. The *3/8″ ID hose* is for use with dryers; the *1/2″ ID hose* is for use with ranges. Furnished with zinc-plated steel fittings that have NPT threads. Maximum pressure is 0.5 psi @ 72° F. Not rated for bend radius.

For information about bend radius and vacuum ratings for hose, see page 255.

Liquefied-Petroleum Gas Hose

- Use with LP gas
- Temp. Range: –40° to +140° F
- Color: Black
- Hose: Buna-N (nitrile) rubber
- Cover: Neoprene rubber
- Reinforcement: PVA (Polyvinyl Alcohol) spirals

Don't be fooled by the rubber construction—the hose material is UL 21 recognized and CSA certified. Furnished with NPT threaded fittings attached. The fittings for *1/4″ and 3/8″ ID hose* are brass; for *1/2″ to 1″ ID hose* are steel. Hose interior is smooth for unrestricted flow. For outdoor use only. Not rated for vacuum.

Smooth-Bore Nitrogen Gas Hose

- Use with nitrogen gas, argon, and oxygen
- Temperature Range: –65° to +450° F
- Hose: PTFE
- Cover: Type 304 stainless steel
- Braid: Type 304 stainless steel

Also known as pigtails, this PTFE hose is nonsticking with a smooth interior for unrestricted flow. It comes cleaned, capped, and bagged to meet CGA (Compressed Gas Association) specification G4.1. Furnished with the fittings attached; fittings are brass and have NPT threads. Can be used indoors and out. Vacuum rating is 28″ Hg @ 72° F.

Pipe Size	Hose ID	Hose OD	Bend Radius	Max. psi @ 72° F	TWO FEMALE FITTINGS 2-ft. Length	Each	3-ft. Length	Each	4-ft. Length	Each

Extreme-Temperature Nitrogen Hose

Also called cryogenic hose, the stainless steel braid gives this hose strength to stand up to applications involving vibration. Hose interior is ribbed. Can be used indoors and out.

Hose for Liquid Nitrogen

- Temperature Range: –320° to +1500° F
- Hose: Type 321 stainless steel
- Braid: Type 304L stainless steel

With Cover

This hose comes cleaned, capped, and bagged to meet CGA (Compressed Gas Association) specification G4.1. Furnished with Type 316 stainless steel 37° flared female fittings with 3/4″-16 UNF straight threads, which are compatible only with male 3/4″-16 UNF threads. The fittings rotate 360° until tightened down during installation. Bend radius is 4 7/8″. Maximum pressure is 1160 psi @ 72° F. Vacuum rating is 29.9″ Hg @ 72° F.

Hose with cover protects the braid; the cover is Type 304 stainless steel.

Hose ID	O'all Lg.	TWO 37° FLARED FEMALE FITTINGS Without Cover: Hose OD		Each	With Cover: Hose OD		Each

Hose with Tube Connections for Liquid Nitrogen

- Temperature Range: –321° to +1250° F
- Hose: Type 316 stainless steel
- Braid: Type 304 stainless steel

Furnished with tube connections. ***Standard hose*** is air cleaned. ***Cleaned and bagged hose*** is cleaned, capped, and bagged to meet CGA specification G4.1. Vacuum rating is 29″ Hg @ 72° F.

Fittings are Type 316 stainless steel. *Yor-Lok fittings* are also known as instrumentation fittings; see page 174 for more information on Yor-Lok fittings. *Male fittings* have NPT threads. *Tube stems* are a short length of tubing; the actual OD of these fittings is the same as the For Tube OD specification listed below.

About Measuring Hose and Tube Clamps

What's the best way to determine the clamp size you'll need? Simply measure the outside diameter of your hose with the fitting installed. Some clamps accommodate a range of sizes, so be sure the size you need falls in the middle of that range.

Note: It is your responsibility to test and monitor clamps to ensure they are appropriate for your application.

Worm-Drive Hose and Tube Clamps

So easy to use, it's no wonder these are the most popular style of hose clamps. Clamps are reusable. The banding is 0.023″ thick. Temperature range is –50° to +250° F. Clamps meet SAE J1508. Not recommended for use with silicone hose and tube.

The ***5/16″ band width*** clamps tighten with a wrench, slotted screwdriver, or 1/4″ hex nutdriver. Torque is 15 in.-lbs.

The ***1/2″*** and ***9/16″ band width*** clamps tighten with a wrench, slotted screwdriver, or 5/16″ hex nutdriver. Torque is 35 in.-lbs.

Type 301 Stainless Steel Clamps— Have a Type 301 stainless steel housing and band for very good corrosion resistance. The *zinc-plated screws* have fair corrosion resistance. The *Type 410 stainless steel screws* have good corrosion resistance. The *Type 305 stainless steel screws* have very good corrosion resistance.

Type 316 Stainless Steel Clamps with Type 316 Stainless Steel Screw— Have excellent corrosion resistance.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Assortments

Each assortment includes a total of 100 clamps—10 of each size shown above with a ★. You'll also get two hex nutdrivers (1/4″ and 5/16″ sizes). Assortments come packed in a metal box with individual compartments for each clamp size.

		Each
Clamps with Zinc-Plated Steel Screw Assortment	5419K17	$96.48
Clamps with Type 410 Stainless Steel Screw Assortment	5419K19	118.57
Clamps with Type 305 Stainless Steel Screw Assortment	5419K21	143.61
Clamps with Type 316 Stainless Steel Screw Assortment	5419K22	166.47

For information about how to measure hose and tube clamps, see page 274.

Mil. Spec. Worm-Drive Hose and Tube Clamps

Just like the worm-drive clamps on the previous page, except these clamps meet MS-35842 and have that military spec stamped into the band. They also meet Fed. Spec. A-A52506 and SAE J1508. Clamps are reusable. The band and housing are Type 301 stainless steel, which offers very good corrosion resistance; the screws are Type 410 stainless steel, which offers good corrosion resistance. The band is 9/16″ wide and 0.023″ thick. Tighten with a wrench, slotted screwdriver, or 5/16″ hex nutdriver. Torque is 40 in.-lbs. Temperature range is –50° to +250° F. Not recommended for use with silicone hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Clamp ID Range Inch	Clamp ID Range mm	SAE No.	Pkg. Qty.		Per Pkg.
7/16″-25/32″	11-20	6	10	54225K54	$11.95

4 1/8″-7″	105-178	104	5	54225K82	12.11

Worm-Drive Hose and Tube Clamps with Thumb Screw

A small variation in design—a thumb screw instead of a screw—allows you to install these worm-drive clamps without any tools. Clamps are reusable. The band and housing are Type 301 stainless steel, which offers very good corrosion resistance; the thumb screws are Type 410 stainless steel, which offers good corrosion resistance. The band is 9/16″ wide and 0.023″ thick. Temperature range is –50° to +250° F. Clamps meet SAE J1508. Not recommended for use with silicone hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Worm-Drive Hose and Tube Clamps with Nonslip Screw

A raised safety collar around the head of the screw prevents your screwdriver from slipping and damaging the hose or tube—especially useful in hard-to-reach areas where it's difficult to keep your screwdriver engaged in the screw. Clamps are reusable. The band and housing are Type 201 stainless steel, which offers good corrosion resistance; the screws are zinc-plated steel, which offers fair corrosion resistance. The band is 9/16″ wide and 0.022″ thick. Tighten with a wrench, slotted screwdriver, or 3/8″ hex nutdriver. Torque is 30 in.-lbs. Temperature range is –40° to +375° F. Clamps meet SAE J1508 and Fed. Spec. WW-C-440B. Not recommended for use with silicone hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Quick-Opening Worm-Drive Hose and Tube Clamps

The screw flips up to release the band for quick opening. Clamps are reusable. All have a Type 201 stainless steel band and housing, which offers good corrosion resistance. The band is 9/16″ wide and 0.022″ thick. Not recommended for use with silicone hose and tube.

***Clamps with Zinc-Plated Steel Screw*—**Screws have a clear coating and offer fair corrosion resistance. Temperature range is –40° to +375° F. The *slotted hex-head screws* can be tightened with a wrench, slotted screwdriver, or 5/16″ hex nutdriver; torque is 35 in.-lbs. The *thumb screw* tightens by hand.

***Clamps with Type 410 Stainless Steel Screw*—**Screws have good corrosion resistance. Tighten screw with a wrench, slotted screwdriver, or 3/8″ hex nutdriver. Torque is 35 in.-lbs. Temperature range is –40° to +800° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Slotted Screw

Thumb Screw

For information about how to measure hose and tube clamps, see page 274.

Any-Diameter Worm-Drive Hose and Tube Clamps

Here's everything you need to make your own 3″ diameter and larger custom-length worm-drive clamps. Simply cut a length of band from the continuous roll and attach a housing and screw. Use a band splicer to attach two lengths of band for an even larger clamp. Clamps are reusable. The bands and housings are Type 301 stainless steel, which offers very good corrosion resistance; the screws are Type 410 stainless steel, which offers good corrosion resistance. The band is 1/2″ wide and 0.023″ thick. Tighten with a wrench, slotted screwdriver, or 5/16″ hex nutdriver. Torque is 40 in.-lbs. Temperature range is –50° to +250° F. Not recommended for use with silicone hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Band Lg.	No. of Screws and Housings	No. of Band Splicers		Each
8 1/2 ft.	3	1	5426K1	$13.75
50 ft.	10	5	5426K2	44.18
100 ft.	25	10	5426K4	94.28

Replacement Parts		Per Box
Box of 10 Screws and Housings	5426K3	$19.82
Box of 10 Band Splicers	5426K6	.96
Box of 10 Band Splicers and 100 ft. Band	5426K7	47.56

Vibration-Resistant Worm-Drive Hose and Tube Clamps

Also called high-torque clamps, a torque rating of 80 in.-lbs. provides extra holding power in high-vibration applications. Clamps are reusable. The band and housing are Type 304 stainless steel for very good corrosion resistance; the screw is Type 410 stainless steel for good corrosion resistance. The band is 5/8″ wide and 0.028″ thick. Tighten with a slotted screwdriver, 5/16″ socket, or 5/16″ hex nutdriver. Temp. range is –40° to +800° F. Clamps meet SAE J1508. Not recommended for use with silicone hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Also Available: All-Type 316 stainless steel clamps, which have a temperature range of –50° to +250° F. Please ask for 5682K1 and specify the corresponding Type 304 stainless steel clamp part number from the listing below.

Worm-Drive Clamps for Soft Hose and Tube

An extended tail acts as a liner to protect soft hoses and tubes from being cut by the slots in the band. Clamps are reusable. Tighten with a slotted screwdriver, 5/16″ socket, or 5/16″ hex nutdriver. Torque is 35 in.-lbs. Clamps meet SAE J1508 and Fed. Spec. WW-C-440B.

Type 201 Stainless Steel Clamps with Zinc-Plated Steel Screw—The band and housing are Type 201 stainless steel for good corrosion resistance; the screw is zinc-plated steel for fair corrosion resistance. The band is 1/2″ wide and 0.022″ thick. Temperature range is –40° to +375° F.

Type 301 Stainless Steel Clamps with Type 305 Stainless Steel Screw—The band and housing are Type 301 stainless steel for very good corrosion resistance; the screw is Type 305 stainless steel, which also has very good corrosion resistance. The band is 9/16″ wide and 0.022″ thick. Temperature range is –40° to +800° F.

Type 316 Stainless Steel Clamps with Type 316 Stainless Steel Screw—Have excellent corrosion resistance. The band is 1/2″ wide and 0.024″ thick. Temperature range is –40° to +1600° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Corrosion-Resistant Nylon Worm Drive Hose and Tube Clamps

Noncorrosive, nonconductive, and lightweight, these all-nylon clamps last longer in highly corrosive environments than metal clamps. Clamps are reusable. They're a great choice for marine applications. The band is 3/8″ wide and 0.063″ thick. Tighten with a slotted screwdriver, 3/16″ hex nutdriver, or the included nylon hex tool. Torque is not rated. Temperature range is –40° to +302° F. Each package includes five clamps and one nylon hex tool.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Clamp ID Range Inch	mm	Pkg. Qty.		Per Pkg.
5/8″-3 1/2″	16-89	5	5471K1	$5.34
1 1/2″-5 1/2″	38-140	5	5471K2	8.25

For information about how to measure hose and tube clamps, see page 274.

Stainless Steel Smooth-Band Worm-Drive Hose and Tube Clamps

Choose these clamps when you want an economical alternative to Type 316 stainless steel. Clamps are reusable and have a smooth band with rolled edges to prevent them from cutting into hoses and tubes. They're ideal for use with silicone hoses and tubes. The band is 3/8″ wide and 0.024″ thick. Temperature range is –40° to +350° F. Clamps meet DIN 3017.

Type 430 stainless steel clamps have a Type 430 stainless steel band and housing and a zinc-plated steel screw. Tighten with a slotted or Phillips screwdriver, or a 9/32″ (7 mm) hex nutdriver. Torque is 20 in.-lbs.

Type 304 stainless steel clamps have a Type 304 stainless steel band, housing, and screw. Tighten with a slotted screwdriver. Torque is 26.5 in.-lbs., unless noted.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

★ Torque is 17.7 in.-lbs.

Type 316 Stainless Steel Smooth-Band Worm-Drive Hose and Tube Clamps

Excellent corrosion resistance is only one reason to use these all-Type 316 stainless steel clamps—they also have a smooth band with rolled edges to prevent them from cutting into hoses and tubes. They're ideal for use with silicone hoses and tubes. Clamps are reusable. The band is 1/2″ wide and 0.031″ thick. Tighten with a 9/32″ (7 mm) hex nutdriver. Temperature range is –40° to +1200° F. Clamps meet SAE J1508.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

54265K14 ..... **Each** $423.35

Any-Diameter Smooth-Band Worm-Drive Hose and Tube Clamps

Build your own 2″ diameter and larger smooth-band worm-drive clamps. Simply cut a length of band from the continuous roll and attach a housing and a screw. Clamps are reusable. Torque is not rated. Temperature range is –100° to +500° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Type 430 SS w/Type 410 Stainless Steel Screw

Offering good corrosion resistance, the band is Type 430 stainless steel, the housing is Type 301 stainless steel, and the screw is Type 410 stainless steel. The band is 3/8″ wide and 0.025″ thick. Tighten with a slotted screwdriver.

Band Lg.	No. of Screws and Housings			Each
10 ft.	5	95885K41		$44.49
50 ft.	10	95885K61		93.08
100 ft.	25	95885K81		165.88
Repl. Screws and Housings (5/Pkg.)		95885K92	**Per Pkg.**	$12.58

200/300 Series SS w/Type 410 Stainless Steel Screw

The banding and the housing are 200/300 series stainless steel for very good corrosion resistance. The screw is Type 410 stainless steel, which offers good corrosion resistance. The band is 3/8″ wide and 0.015″ thick. Tighten with a slotted screwdriver or 5/16″ hex nutdriver.

Band Lg.	No. of Screws and Housings			Each
10 ft.	3	5540K22		$25.33
100 ft.	25	5540K11		158.12
Repl. Screws and Housings (10/Pkg.)		5540K14	**Per Pkg.**	$49.74

For information about how to measure hose and tube clamps, see page 274.

Constant-Tension Worm-Drive Clamps for Soft Hose and Tube

Don't worry about your hose and tube expanding and contracting when temperatures fluctuate—these clamps have Belleville springs that automatically increase and decrease the clamps' diameter to eliminate the need for retightening. These clamps have an extended tail on the band, which acts as a liner to protect soft hose and tube from being cut. The band is 0.028″ thick. Clamps are reusable. Temperature range is –50° to +250° F. Clamps meet SAE J1508.

9/16″ Band Width—Band and spring are Type 301 stainless steel and the housing is Type 302 stainless steel, which both offer very good corrosion resistance. The screw is Type 410 stainless steel, which offers good corrosion resistance. Tighten with a wrench or 5/16″ hex nutdriver. Torque is 45 in.-lbs.

5/8″ Band Width—The band and housing are Type 304 stainless steel and the spring is Type 301 stainless steel, which both offer very good corrosion resistance. The *zinc-plated screw* has fair corrosion resistance; the *Type 410 stainless steel screw* has good corrosion resistance. Tighten with a wrench or 3/8″ hex nutdriver. Torque is 90 in.-lbs.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Clamp ID Range Inch	mm	SAE No.	With Zinc-Plated Steel Screw	Each	With Type 410 SS Screw	Each

Quick-Release Worm-Drive Duct and Hose Clamps

A quick-release latch allows you to access your line as often as you need while maintaining your original clamp size. Perfect for temporary connections and applications requiring repeated use. Use with flexible duct hose; not recommended for use with rigid hose. Clamps are reusable. The band, housing, and latch are Type 304 stainless steel, which offers very good corrosion resistance. The screw is Type 410 stainless steel, which offers good corrosion resistance. The band is 5/8″ wide and 0.031″ thick. Tighten with a slotted screwdriver, 8 mm socket, or 8 mm hex nutdriver. Torque is 130 in.-lbs. Temperature range is –4° to +428° F.

220-lb. clamps have a latch that is 0.87″ (22 mm) wide. ***496-lb. clamps*** have a latch that is 0.96″ (26.5 mm) wide. *Note*: Work load limit is the maximum force the latch can withstand without affecting its operation or appearance.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Also Available: All-zinc-plated steel clamps offered in the sizes marked with a ♦ below. Work load limit is 150 lbs. Temperature range is +33 to +400° F. Please ask for 5588K1 and specify clamp ID range.

220-lb. Work Load Limit

Clamp ID Range Inch	mm		Each
2 3/4″-4 1/2″	70-115	5215K11 ♦	$41.27
3 1/2″-5 3/8″	90-135	5215K12 ♦	39.03
5 1/8″-6 7/8″	130-175	5215K13 ♦	41.21
6 3/4″-8 1/2″	170-215	5215K14 ♦	43.30

Quick-Release Duct Hose Clamps

Install and remove clamps in seconds—just flip the toggle latch. Clamps are reusable and open completely for easy installation around blower hose and ventilation duct. They have fair corrosion resistance; the housing and toggle are cold-rolled steel, the band is electrogalvanized steel, and the lugs and latch are zinc-plated steel. The band is 7/8″ wide and 0.035″ thick. Temperature range is –250° to +500° F.

Clamp ID Range Inch	mm		Each
4″-4 1/4″	101-108	53185K51	$13.35
6″-6 1/4″	152-159	53185K52	14.45

Clamp ID Range Inch	mm		Each
14 1/4″-14 7/16″	362-366	53185K56	$24.76
16 3/16″-16 3/8″	411-415	53185K57	25.32
18 3/16″-18 3/8″	462-466	53185K58	26.09
20 3/16″-20 3/8″	513-517	53185K59	26.85
24 3/16″-24 7/16″	614-620	53185K61	27.76

Worm-Drive Clamps for Wire Duct

Right-Hand Spiral

Right-Hand Spiral

Left-Hand Spiral

Also known as bridge clamps, these worm-drive clamps are designed to provide a tight seal on wire duct hose. Clamps are reusable. The band and the housing are Type 301 stainless steel and the screw is Type 305, so they offer very good corrosion resistance. The band is 1/2″ wide and 0.025″ thick. Tighten with a slotted screwdriver, 5/16″ socket, or 5/16″ hex nutdriver. Torque is 50 in.-lbs. Temperature range is –250° to +500° F.

To Order: Specify right-hand or left-hand spiral. When looking at the end of your hose, ***right-hand spiral*** twists away from you clockwise; ***left-hand spiral*** twists away from you counterclockwise.

Clamp ID Range Inch	mm		Each
3 1/4″-4 3/4″	83-121	45955K31	$5.44
4 1/4″-5 3/4″	108-146	45955K32	6.05

17 1/4″-18 3/4″	438-476	45955K41	17.94

For information about how to measure hose and tube clamps, see page 274.

Miniature Bolt Hose and Tube Clamps

Stainless Steel

Sized perfectly for small-diameter hose and tube. Clamps provide a 360° seal and are reusable. They are smooth on the inside and have rolled edges to protect soft hose and tube.

Galvanized steel clamps offer fair corrosion resistance. The band is 3/8″ wide and 0.02″ thick. Tighten with a slotted screwdriver or 9/32″ (7 mm) hex nutdriver. Torque is 13.3 in.-lbs. Clamps meet SAE J1508. Temperature range is –40° to +450° F.

Type 304 stainless steel clamps offer very good corrosion resistance. The band is 3/8″ wide and 0.02″ thick. Tighten with a Phillips screwdriver or 9/32″ (7 mm) hex nutdriver. Clamps meet SAE J1508. Torque is 13.3 in.-lbs. Temperature range is –40° to +450° F.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Clamp ID Range Inch	mm	Pkg. Qty.		Per Pkg.
Galvanized Steel Clamp with Galvanized Steel Screw

Constant-Tension T-Bolt Hose Clamps

A spring automatically adjusts the clamp diameter to compensate for the expansion and contraction of hose when temperatures fluctuate. The T-bolt design provides high strength and a 360° seal. Clamps are reusable. The band is 3/4″ wide, 0.025″ thick, and has rolled edges to protect soft hose. The locknut has a nylon insert. Tighten with a 7/16″ wrench or hex nutdriver. Torque is 75 in.-lbs. Maximum temperature is 250° F.

Type 301 Stainless Steel Clamps with Zinc-Plated Steel Bolt— T-bolt, spring, and locknut are zinc-plated steel, which has fair corrosion resistance.

Type 316 Stainless Steel Clamps with Type 316 Stainless Steel Bolt— Excellent corrosion resistance.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Clamp ID Range Inch	mm	Type 301 SS with Zinc-Plated Steel Bolt	Each	Type 316 SS w/Type 316 SS Bolt	Each

Easy-to-Install Bolt Hose Clamps

Remove the bolt and flip open the hinged bridge—installation is that simple. Bolt clamps are stronger than worm-drive clamps. Clamps are reusable. They have rolled edges to protect your hose, so they are ideal for use with silicone and other soft hose and tube. Temperature range is –40° to +122° F.

Type 430 Stainless Steel Clamps with Zinc-Plated Steel Bolt— The nut and bolt are zinc-plated steel for fair corrosion resistance. Clamps meet DIN 1.4016.

Type 304 Stainless Steel Clamps with Type 304 Stainless Steel Bolt— Have very good corrosion resistance. Clamps meet DIN 1.4301.

45/64″ band width clamps can be tightened with an 8 mm hex nutdriver; torque is 46 in.-lbs. ***25/32″ band width clamps*** can be tightened with an 11 mm hex nutdriver; torque is 106 in.-lbs. ***63/64″ band width clamps*** can be tightened with a 13 mm hex nutdriver; torque is 166 in.-lbs.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

T-Bolt Hose and Tube Clamps

The T-bolt design provides high strength and a 360° seal. The band is 3/4″ wide and 0.025″ thick. Clamps are reusable. The locknut has a nylon insert. Temperature range is –100° to +250° F.

300 Series Stainless Steel Clamps with Zinc-Plated Steel Bolt— The T-bolt and locknut are zinc-plated steel, which has fair corrosion resistance. The band has rolled edges to protect soft hoses and tubes. Tighten with a 7/16″ wrench. Torque is 90 in.-lbs.

Type 316 Stainless Steel Clamps with Type 316 Stainless Steel Bolt— Have excellent corrosion resistance. Tighten with a 7/16″ wrench. Torque is 75 in.-lbs.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Clamp ID Range Inch	mm	300 Series SS w/Zinc-Plated Steel Bolt	Each	Type 316 SS w/Type 316 SS Bolt	Each

For information about how to measure hose and tube clamps, see page 274.

High-Torque Malleable Iron Bolt Hose Clamps

Single Bolt | Double Bolt | Double Bolt with Saddles

Get extra holding power in high-torque applications. These rugged clamps provide a 360° seal and have a narrow clamp ID range for a precise fit. Clamps offer fair corrosion resistance; they're made of zinc-plated malleable iron and have zinc-plated carbon steel bolts and nuts. Tighten with a wrench or torque wrench (see below for the wrench size required). Because the bolts bend when tightened, these clamps are not reusable. Not rated for temperature. Not recommended for use with helix wire hose and hydraulic hose.

Single Bolt— One bolt makes these clamps quicker to install than double-bolt clamps.

Double Bolt— The tightening force is equally distributed between both sides of the clamp. These clamps open completely for easier installation and have reinforced bolt lugs to prevent the clamp from bending out of alignment.

Double Bolt with Saddles— Same as the double-bolt clamps, except these have two interior saddles to maintain even pressure around larger diameter hoses.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Snap-Grip Nylon Hose and Tube Clamps

Single Snap-Grip

Double Snap-Grip

Installing these clamps is a snap. Just push together the interlocking teeth with your fingers, then squeeze tight with pliers. To remove, use pliers to push sideways and separate the teeth. Clamps are lightweight and chemical resistant.

Single Snap-Grip Clamps— Have a single row of interlocking teeth. They're made of glass-filled nylon 6/6, which has very good corrosion resistance. Temperature range is –25° to +275° F.

Double Snap-Grip Clamps— Have two rows of interlocking teeth for extra gripping strength. They're made of nylon 6/6, which has excellent corrosion resistance and is UV stable. Material meets ASTM D149, D150, and D257. Temperature range is –40° to +302° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Single Snap-Grip Clamp Assortment

This assortment contains a total of 226 clamps from the single snap-grip clamps listed above. You'll get: 25 each of 5246K61-K64; 15 each of K65-K69; 12 each of K71-K73; 10 each of K74; and 5 each of K78. Comes in a plastic storage box.

5755K61 ..... **Each** $155.74

For information about how to measure hose and tube clamps, see page 274.

Pinch Hose and Tube Clamps

Also known as ear clamps, these clamps install by crimping the pinch point(s) with pinch-clamp pincers (sold separately; see 6541K67 and K69 on page 282). They are for one-time use. Clamps withstand vibration and temperature changes without loosening. Use them to secure hose, tube, coaxial cable, and rope. Clamps meet SAE J1508.

Zinc-plated steel clamps have fair corrosion resistance; ***Type 304 stainless steel*** clamps have very good corrosion resistance.

Single Pinch—Perfect for tight spots, these clamps install quickly because only one side needs to be crimped.

Double Pinch—Accommodate a greater variation in hose diameters than single-pinch clamps, and can be used on thicker walled hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Gap-Free Pinch Hose and Tube Clamps

The unique design prevents gaps that can cause leaks. A reinforcing dimple in the ear creates spring-like action that allows these clamps to withstand vibration and temperature changes without loosening. They install by crimping the pinch point with pinch-clamp pincers (sold separately; see 6541K67 and K69 on page 282). Clamps are for one-time use. They're made of Type 304 stainless steel for very good corrosion resistance. Use them to secure hose, tube, coaxial cable, and rope. Clamps meet SAE J1508.

Clamps with Insert—Ideal for soft tube, these clamps have a Type 302 stainless steel insert that bridges the gap created by the ear to ensure complete circumferential sealing.

Clamps with Tongue and Groove—The tongue and groove design creates a smooth, 360° seal to protect hose and tube.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Tongue and Groove

Clamp ID Range Inch	Clamp ID Range mm	Band Thick.	Pkg. Qty.		Per Pkg.

For information about how to measure hose and tube clamps, see page 274.

Pinch Clamp Pincers

Use these steel pincers to simplify the installation of pinch (ear) clamps (shown on page 281).

Straight-jaw pincer must be used perpendicular to the hose. ***Side-jaw pincer*** is good for tight spaces because you can use it parallel or perpendicular to the hose.

	O'all Lg.		Each
Straight-Jaw Pincer	8⅝″	6541K67	$23.26
Side-Jaw Pincer	8⅝″	6541K69	28.42

Constant-Tension Spring-Band Hose and Tube Clamps

The spring-action band provides constant tension—clamps automatically expand and contract with your hose and tube as temperatures fluctuate. These clamps provide more coverage than the spring clamps below to reduce the chance of leaks. They're made of carbon steel with black zinc-plating for fair corrosion resistance. Clamps are for one-time use. They require the use of pliers (sold separately at right) for installation and removal. Clamps meet SAE J1508. Temperature range is –100° to +400° F.

Note: When choosing a clamp, measure the outside diameter of your hose or tube with the fitting installed.

Constant Tension Spring Band Hose and Tube Clamp Pliers..... 7329K21 **Each** $36.07

Constant-Tension Spring Hose and Tube Clamps

Our spring clamps automatically expand and contract with your hose and tube in response to fluctuations in temperature. Not as bulky as the constant-tension clamps above, these round-wire clamps are ideal for low-pressure applications. Clamps are for one-time use. They require the use of pliers (sold separately below) for installation and removal. Temperature range is –100° to +400° F.

Zinc-Plated Carbon Steel— Offers fair corrosion resistance. Clamps meet SAE J1508.

17-7 PH Stainless Steel— Offers good corrosion resistance. Clamps are heat treated, so they are stronger than carbon steel to better retain their hold. They meet AISI 631, ASTM 313, and AMS-5678.

Note: When choosing clamps, measure the outside diameter of your hose or tube *without* the fitting installed.

Spring-Hose-Clamp Pliers

Jaws have grooves that grip the ends of the spring clamps (shown above) to prevent slipping and twisting. Pliers are made of forged steel and are 8 1/16″ long.

5324K97..... **Each** $21.52

Twin-Ring Hose Clamps

A double ring of thick wire provides a 360° seal around large-diameter hose. Clamps are ideal for use on metal hose and are reusable. They're made of zinc-plated steel, which offers fair corrosion resistance. The clamps with ***¼″ wire diameter*** install with a 9/16″ socket wrench; use an 11/16″ socket wrench on clamps with ***5/16″ wire diameter***. Torque is 720 in.-lbs. Clamps are not rated for temperature.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Clamp ID Range Inch	Clamp ID Range mm	O'all Wd.		Each

For information about how to measure hose and tube clamps, see page 274.

Low-Profile Hose Clamps

Also known as center-punch clamps, these clamps require a tool for installation (sold separately below) and a hammer blow to the buckle. Unlike worm-drive clamps and bolt clamps, these clamps have a low profile with no protruding parts, plus they are stronger because the band is double wrapped. They're easier to install than the Extra-Strength Low-Profile Clamps on this page. Clamps are for one-time use. Use them to secure hose, tube, coaxial cable, and rope.

Galvanized Carbon Steel Band with Type 201 Stainless Steel Buckle— Band has fair corrosion resistance; buckle has good corrosion resistance. Temperature range is –100° to +300° F.

Type 201 Stainless Steel Band and Buckle— Have good corrosion resistance. Temperature range is –100° to +500° F.

Ratchet-Action Installation Tools— Each tool allows you to tighten 3/8″ and 5/8″ wide clamps then break off the excess band. All are made of steel. The *light duty tool* has a punch lever on each end and a ratchet handle. The *medium duty tool* is longer than the light duty tool for increased leverage to tighten the clamp. The *heavy duty tool* has the most leverage and has a ball handle that makes it easier to ratchet.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

ⓘ For instructions on how to use the installation tools, go to mcmaster.com and search for **5657KAC**.

Extra-Strength Low-Profile Hose Clamps

Ratchet-Handle Installation Tool

Wing-Handle Installation Tool

The end of the band curls back into the buckle—this small feature gives these clamps up to 25% more strength than the other low-profile clamps on this page. Also known as JS-style clamps, these clamps require the use of an installation tool (sold separately below) to install. Unlike worm-drive clamps and bolt clamps, these have a low profile with no protruding parts, plus they have a smooth inside to prevent damage to the hose. Clamps are for one-time use. They meet SAE J1508.

Galvanized Steel Band with Type 201 Stainless Steel Buckle— Band has fair corrosion resistance; buckle has good corrosion resistance. Temperature range is –100° to +300° F.

Type 201 Stainless Steel Band and Buckle— Have good corrosion resistance. Temperature range is –100° to +500° F.

Type 316 Stainless Steel Band and Buckle— Have excellent corrosion resistance. Temperature range is –100° to +600° F.

Installation Tools— Made of zinc-plated carbon steel.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

ⓘ For instructions on how to install these clamps using the installation tool, go to mcmaster.com and search for **5423KAC**.

Ratchet-Handle Installation Tool (for 1/4″-3/8″ band width)	**5424K3**	**Each**	$150.02
Wing-Handle Installation Tool	**5423K87**	**Each**	$235.04

For information about how to measure hose and tube clamps, see page 274.

Low-Profile Hose Banding and Buckles

Create your own low-profile hose and tube clamps—all you need is a roll of banding, a package of buckles, and an installation tool (all sold separately). Ideal for both permanent connections and emergency repairs, use this banding with buckles to secure cable, signs, and all kinds of irregular shapes.

The breaking strength listed is the maximum tension that can be applied to the banding. For an extra-strong clamp, wrap the banding around twice, threading it through the buckle each time.

Banding—Furnished in a dispenser carton, this banding has smooth, rounded edges to protect your hose from cuts.

Ear-style buckles have teeth and ears for strong, reliable clamping. For one-time use.

Clip-style buckles (marked with a ★) are for one-time use.

Set-screw-style buckles are made of Type 301 stainless steel for very good corrosion resistance, except the buckles for 5/8″ and 3/4″ band widths are Type 201 stainless steel for good corrosion resistance. Secure buckles by tightening the set screw with the included Allen wrench. They are reusable.

Galvanized Carbon Steel Banding and Buckles—Have fair corrosion resistance. Temp. range is –100° to +500° F.

Type 201 Stainless Steel Banding and Buckles—Have good corrosion resistance. Temperature range is –100° to +500° F.

Type 304 Stainless Steel Banding and Type 316 Stainless Steel Buckles—Banding has very good corrosion resistance; buckles have excellent corrosion resistance. Temperature range is –200° to +1300° F.

Type 316 Stainless Steel Banding and Buckles—Have excellent corrosion resistance. Temperature range is –100° to +500° F.

Also Available: Black polyester-coated Type 201 stainless steel banding, which has excellent abrasion and UV resistance. Please ask for 5422K1 and specify 1/2″ or 3/4″ band width and 25-ft. or 100-ft. length.

★ Clip-style buckle.

Hose Banding Installation Tools

Use these tools to install the Low-Profile Hose Banding and Buckles on this page.

A Ratchet-Handle Tool—Made of zinc-plated carbon steel with a vinyl-coated handle, this tool uses ratchet action to tighten the band. You can also use this tool with the 3/8″ wide 5423K Extra-Strength Low-Profile Hose Clamps on page 283.

B Wing-Handle Tool—Made of forged steel with a blue epoxy finish. It comes with a built-in cutter and tension handle, as well as a tension nut that can be used instead of the handle in confined spaces. This tool can also be used to install 5423K Extra-Strength Low-Profile Hose Clamps (on page 283) with the addition of an adapter (sold separately below; see Styles C and D).

C&D Adapters—Made of zinc-plated carbon steel, these adapters fit over the Wing-Handle Tool so you can install 5423K Extra-Strength Low-Profile Hose Clamps (sold on page 283). The *handle-cut adapter* cuts the banding when you press down the handle. The *screw-cut adapter* cuts the banding when you turn a screw with the included ratchet handle.

E Vise-Mount Tool—Made of zinc-plated carbon steel.

ⓘ For information about how to use these tools, go to mcmaster.com and search for **5424KAC**.

For information about how to measure hose and tube clamps, see page 274.

Wide-Range Band Clamps

One clamp fits a wide range of diameters, so you can always have the right size clamp on hand. Clamps are for one-time use. The screw tightens with a slotted screwdriver, 5/16″ socket wrench, or 5/16″ hex nutdriver. Torque is 20 in.-lbs. Temperature range is –40° to +375° F. Not recommended for use with silicone rubber hose and heavy wire-reinforced hose.

Galvanized Steel Solid Band— Offering fair corrosion resistance, the band is galvanized carbon steel; the buckle and screw are zinc-plated steel. Clamps lock with a screw on the banding.

Stainless Steel Slotted Band— Offering very good corrosion resistance, the band and buckle are Type 301 stainless steel; the screw is zinc-plated Type 305 stainless steel. Clamps lock with a screw on the banding and a notch in the slot. Clamps meet SAE J1508 and Fed. Spec. WW-C-440B, plus they are Uniform Plumbing Code listed.

Reusable Polypropylene Banding

A great choice for both temporary and long-term clamping, this banding is easy to install and can be used over and over again. Use it for packaging applications, attaching flexible duct, and securing insulation to pipe. To install, cut the banding to your desired length with a utility knife and thread it through the buckle (sold separately). Polypropylene has excellent corrosion resistance; it is also lightweight, UV resistant, and chemical resistant. Temperature range is –30° to +200° F.

Banding is ½″ wide and 0.05″ thick. It has interlocking ridges on the top for secure holding and a smooth back to reduce the chance of damage to hose. The breaking strength is 190 lbs; the breaking strength is the maximum tension that can be applied to the banding.

Tightening/cutting tool is made of Type 304 stainless steel with rubber handles.

Color	Banding Roll Lg.		Per Roll	Buckles Pkg. Qty.		Per Pkg.

Black	100 ft.	**5188K45**	12.59	25	**5188K56**	9.08
Tightening/Cutting Tool		**5188K33**	Each			$55.38

Shrink-to-Fit Plastic Coolant Hose Clamps

Slide these clamps over your coolant hose and heat-shrink them with a heavy duty heat gun (not included; see page 2733). Clamps conform to any shape hose and have a wide sealing area. They never need tightening because when the hose contracts with cold temperatures, the clamps adjust themselves to maintain tension. Use them with coolant hose; however, they are not recommended for use with wire-reinforced coolant hose. Clamps are for one-time use. Meet SAE J1610. Temperature range is –40° to +302° F.

Hose clamp removal tool is made of steel and is spring loaded to quickly cut through the clamp without damaging the hose.

Note: When choosing a clamp, measure the outside diameter of your hose with the fitting installed.

Hose Clamp Removal Tool

ⓘ For detailed installation and removal instructions, go to mcmaster.com and search for **5470KAC**.

Hose Clamp Removal Tool				**5470K4**	Each $48.17

Smooth Metal Hose Banding

Ridges on one side of this banding serve as a track for the housing to ride upon—this leaves the reverse side smooth with no sharp edge to worry about. Use this banding to make your own 4″ diameter and larger worm-drive clamps. Also use it to clamp pipe, attach signs, and connect tubing. To install, cut the banding to your desired length with wire snips, feed it through the housing (sold separately), and tighten screw with a slotted screwdriver or 9/32″ (7 mm) hex nutdriver. Clamps are reusable.

Banding is 15/32″ wide and 0.031″ thick. The breaking strength listed is the maximum tension that can be applied to the banding.

Zinc-Plated Steel— Has fair corrosion resistance. Temperature range is –22° to +392° F.

Type 430 Stainless Steel— Has good corrosion resistance. Temperature range is –22° to +572° F.

Breaking Strength, lbs.	Banding Roll Lg.		Per Roll	Housings with Screw Pkg. Qty.		Per Pkg.
Zinc-Plated Steel						
382	98½ ft.	**6542K63**	$48.93	20	**6542K73**	$9.51
Type 430 Stainless Steel						
584	98½ ft.	**6542K64**	56.22	10	**6542K74**	7.85

Pipe-Covering Metal Banding

Use this lightweight metal banding for securing pipe coverings as well as for packaging applications. To install, cut the banding to your desired length with wire cutters, feed it through the buckle, and secure with a tensioner (see page 1571 for tensioners). Clamps are for one-time use. Maximum temperature is 300° F.

The breaking strength listed is the maximum tension that can be applied to the banding.

Aluminum— An economical choice for noncorrosive applications. Meets ASTM B209.

Type 304 Stainless Steel— Offers very good corrosion resistance.

Barbed Hose Fittings

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	6 5/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	6″

Brass Barbed Hose Fittings

- Maximum Pressure @ 72° F: 250 psi for all, except threaded 90° and 45° elbows are 150 psi
- Temperature Range: –40° to +160° F
- Hose: Use reinforced rubber
- Clamps: Use worm-drive clamps (see pages 274-277) or hose ferrules (see page 290)

Also known as hose nipples, these fittings are made from brass for good corrosion resistance. Use with air and water. Fittings meet SAE J476 and the functional requirements of SAE J512. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Hose-to-Threaded Pipe Connectors— Are barbed on one end and threaded on the other.

Hose-to-Threaded Pipe Easy-Install Connectors— Also barbed on one end and threaded on the other, but these rotate until they are tightened. They're furnished with a Buna-N (nitrile) seal.

Hose-to–45° Flare Threaded Connectors— Let you connect hose to 45° flared tubing. The flared ends have UNF straight threads.

Hose-to-Hose Connectors— Also called hose menders and splicers. Use to repair damaged hose and to connect two pieces of hose.

Also Available: Fittings with BSPT (British Standard Pipe Taper) threads where indicated with a ♦. Please ask for 1075T1 and specify the hose ID and pipe size.

Straight-Thread Brass Barbed Hose Fittings

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: –20° to +110° F
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use worm-drive clamps (see pages 274-277) and hose ferrules (see page 290)

The straight threads combined with an SBR rubber gasket in the female adapters provide a better seal than other fittings with a threaded connection—they're a great choice if you repeatedly connect and disconnect your hose line. The *easy-install adapters* have a nut that rotates until they are tightened. Also known as hose nipples, these fittings are made from brass for good corrosion resistance. Use with air, water, and coolants. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) and NPSH (National Pipe Straight Hose) threads are compatible with male NPT threads.

Bronze Barbed Hose Fittings

- Maximum Pressure @ 72° F: 100 psi
- Temperature Range: 32° to 212° F
- Hose: Use reinforced rubber
- Clamps: Use worm-drive clamps (see pages 274-277) and band clamps (see pages 283-285)

Also known as hose nipples, these fittings are made from bronze to offer better corrosion resistance than brass. Use with air, water, and salt water. They meet UL 1121 for marine applications and ASTM B584. Not rated for vacuum.

For Hose ID	Pipe Size, NPT	Adapters, Male Pipe	Each	90° Elbows, Male Pipe	Each

Tight-Seal Straight-Thread Brass Barbed Hose Fittings

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: –40° to +160° F
- Hose: Use reinforced rubber
- Clamps: Use worm-drive clamps (see pages 274-277) and hose ferrules (see page 290)

Assembled

Often called ball-seat hose nipples, these two-piece fittings consist of a barbed stem that seats inside a nut for a better seal than fittings with a thread-to-thread connection. The nut rotates to make installation easier. Fittings are made from brass for good corrosion resistance. Use with air and water. They meet ANSI B1.20.1, SAE J476, and the functional requirements of SAE J512. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

Straight-Thread Aluminum Barbed Hose Fittings

- Max. Pressure @ 72° F: 1 1/2" to 4": 50 psi; 6": 20 psi
- Temperature Range: –20° to +180° F
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use bolt clamps (see pgs. 279-280) and band clamps (see pgs. 283-285)

Made from aluminum for good corrosion resistance, these lightweight fittings have straight threads and a neoprene gasket in the female adapters for a better seal than other fittings with a threaded connection. All have lugs for better gripping, unless noted. The *easy-install adapters* have a nut that rotates until they are tightened. Use these with air, water, and oil. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

Barbed Hose Fittings

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	5 5/8″	6 5/8″	8 5/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	5″	6″	8″

Type 316 Stainless Steel Barbed Hose Fittings

- Max. Pressure @ 72° F: 300 psi
- Temp. Range: –40° to +200° F
- Hose: Use reinforced plastic
- Clamps: Use band clamps (see pages 283-285)

Made from Type 316 stainless steel for excellent corrosion resistance. Use with air, water, oil, gasoline, and coolants. Not rated for vacuum.

Hose-to-Threaded Pipe Connectors— Also known as hose nipples, they're barbed on one end and threaded on the other.

Hose-to-Hose Connectors— Also called hose menders and splicers, use these to connect two pieces of hose.

Barbed Hose Fittings

- Max. Pressure @ 72° F: 150 psi
- Temp. Range: –40° to +350° F
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use worm-drive clamps (see pages 274-277) and band clamps (see pages 283-285)

Use these barbed hose fittings with air, water, and oil.

Hose-to-Threaded Pipe Connectors— Also called hose nipples. They're barbed on one end and threaded on the other. Vacuum rating is 29″ Hg @ 72° F.

Hose-to-Hose Connectors— Also called hose menders and splicers, use these to repair damaged hose and to connect two pieces of hose. Not rated for vacuum.

Thick-wall adapters have thicker walls and more barbs than the standard-wall adapters.

Zinc-plated steel has fair corrosion resistance. ***Aluminum*** is lightweight with good corrosion resistance. ***Type 304 stainless steel*** offers very good corrosion resistance.

Easy-Fit Barbed Hose Fittings

- Maximum Pressure @ 72° F: 1/2" to 4": 125 psi; 5" to 8": 100 psi
- Temperature Range: –20° to +200° F
- Hose: Use reinforced rubber
- Clamps: Use worm drive clamps (see pgs. 274-277), T-bolt clamps (see pg. 279), and band clamps see pgs. 283-285)

With low-profile barbs and a longer first barb, you'll get a smoother connection and a better grip than with other fittings. All meet ANSI/ASME B1.20.1. Vacuum rating is 26" Hg @ 72° F. Use with air and water.

Hose-to-Threaded Pipe Connectors— Also known as hose nipples. They're barbed on one end and threaded on the other.

Hose-to-Hose Connectors— Also called hose menders and splicers, use these to repair damaged hose and to connect two pieces of hose.

Steel has poor corrosion resistance. Meets ASTM A53. ***Zinc-plated steel*** has fair corrosion resistance. Meets ASTM A53. ***Aluminum*** is lightweight with good corrosion resistance. Meets ASTM B241. ***Brass*** has good corrosion resistance. Meets ASTM B43. ***Type 316 stainless steel*** offers excellent corrosion resistance. Meets ASTM A312.

Barbed Hose Fittings & Hose Ferrules

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	3 1/2″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	3″

Lightweight Plastic Hose Fittings

- Maximum Pressure: See below
- Temperature Range: See material descriptions
- Hose: Use reinforced rubber and reinforced plastic
- Clamps: Use worm-drive clamps (see pages 274-277) and T-bolt clamps (see page 279)

Light in weight, these plastic fittings are not rated for vacuum.

Hose-to-Threaded Pipe Connectors— Also known as hose nipples, they're barbed on one end and threaded on the other.

Hose-to-Hose Connectors— Also called hose menders and splicers, use these to repair damaged hose and to connect two pieces of hose.

Glass-reinforced yellow nylon has good chemical resistance. Use with water and ethylene glycol. Temperature range is –30° to +200° F.

Glass-reinforced black polypropylene has very good chemical resistance. Use with water, mineral oil, and citric acid. Temperature range is 10° to 150° F.

FDA-compliant white polypropylene is for use with food and beverage. Temperature range is 10° to 180° F.

White PVDF has the best resistance to chemicals. Use with water, salt water, mineral oil, and acids such as citric, phosphoric, and nitric. Temperature range is –20° to +300° F.

Hose Ferrules

Use ferrules to create or repair a permanent connection between your hose and a barbed hose fitting. You will need a hose crimper (sold separately on page 291) for installation. Ferrules are for use with air and water hose.

Brass and ***aluminum*** have good corrosion resistance. Choose a ferrule with an ID no more than 0.025″ larger than your hose OD with the fitting installed; also make sure the ferrule is at least as long as the barb end of your fitting.

Type 304 stainless steel offers very good corrosion resistance. Choose a ferrule with an ID no more than 0.031″ larger than the hose OD with the fitting installed.

For information about selecting pipe size, see pages 2-3.

Clamp-Free Hose Fittings

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: –40° to +160° F
- Hose: Use reinforced rubber
- Clamps: Not required

Also called reusable hose fittings, you can use these fittings over and over again without the need for clamps or crimping tools. Use with air and water. Not rated for vacuum.

You'll need a female end (ferrule) and a male end (stem) with the same hose ID to make a connection. Simply twist the female end onto your hose, then lubricate the male end and thread it into the female end.

Brass fittings have good corrosion resistance. They meet SAE J476 and J512. Connections are NPTF (Dryseal), which are compatible with NPT threads.

Type 303 stainless steel fittings have very good corrosion resistance. Connections are NPT.

Hose Crimpers

Use with ferrules on pg. 290 to secure barbed fittings onto your hose.

Hammer-Operated Crimper

Use a hammer strike or a vise to crimp 7/16″, 9/16″, and 11/16″ OD air hose. Made of steel, crimper is 9″ Lg. × 1 1/4″ Wd.

5551K13 ..... **Each** $28.61

Hose Crimping Pliers

Two-Hole Jaw

As you squeeze the handles, the vise-like jaws lock tightly onto the ferrule for a secure crimp on air hose. All are 1/2″ wide and made of steel with a black finish, except 54215K11 has a nickel-plated finish.

	For Hose OD	Lg.		Each
Two-Hole Jaw	7/16″, 9/16″	9″	54215K11	$27.40
Two-Hole Jaw	5/8″, 11/16″	8 3/4″	54215K22	52.55
Three-Hole Jaw	5/16″, 11/32″, 27/64″	9″	54215K24	56.03

Lever-Operated Crimper with Dies

Furnished with five removable steel dies that crimp 0.484″ to 0.703″ OD air hose (without the fittings installed). Base is cast iron; handle is steel. Crimper is 12″ long and has two 1/8″ dia. mounting holes (fasteners not included).

5531K41 ..... **Each** $246.01

Lever-Operated Crimper and Dies

Individual dies (sold separately) allow you to crimp air and water hose from 0.75″ to 1.375″ OD (without the fittings installed). Base is cast iron; handle is zinc-plated steel. Crimper is 12″ long and has two 1/8″ dia. mounting holes (fasteners not included).

To Order: For dies, please specify size: 0.75″, 0.781″, 0.8125″, 0.875″, 0.906″, 0.938″, 0.969″, 1″, 1.125″, or 1.375″.

		Each
Crimper	7986K1	$206.00
Dies	7986K2	32.08

Swivel Air Hose Fittings

- Maximum Pressure @ 72° F: 150 psi
- Temperature Range: –20° to +200° F
- Hose: Use reinforced rubber
- Clamps: For fittings with a barbed end, use worm-drive clamps (see pages 274-277)

Connect your air hose to portable air tools with these fittings. These fittings are not rated for vacuum.

Threaded Pipe-to-Threaded Pipe Swivel Connectors

90° elbows swivel on one axis to allow your hose to extend horizontally away from the tool. They have an aluminum body; the female threads are aluminum, the male threads are steel.

Double swivels swivel on two axes to allow your hose to extend vertically to the floor regardless of how the tool is held. They have an aluminum body; the female threads are aluminum, the male threads are steel.

Nonmarring double swivels also swivel on two axes, but these will protect delicate surfaces from scratching. For fittings with 1/4″ *female threads*, the female threads are nylon, the male threads are steel; the body on *91095K81* is a composite of glass-filled nylon and polycarbonate, while the body on *91095K91* is polycarbonate. Fittings with 3/8″ *female threads* have a steel body; both the female threads and male threads are zinc-plated steel. The fitting with 1/2″ *female threads* is all aluminum.

Flex connectors flex 45° from center. They're made from steel with a black finish.

Straight connectors are made from brass. Material meets ASTM B16/16M-00.

Push-On Hose & Fittings

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″

Hose for Push-On Fittings

- Maximum Pressure @ 72° F: Standard: 200 psi; Choose-a-Color: 250 psi; High-Pressure: 300 psi
- Temperature Range: –20° to +150° F
- Fittings: Use push-on style (see below and pg. 293)

Because of the unique braid-reinforced design, push-on hose doesn't require clamps or ferrules to stay put. In fact, the more you pull on the fitting, the tighter the hose will grip. Not rated for vacuum.

Standard Buna-N/PVC Blend

Use with air and water. Both the tube and cover are Buna-N blended with PVC and reinforced with a textile braid. Hose meets ASTM D2240, D412, and D792. Color is black. **To Order:** Please specify hose length of 5-, 10-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet.

Hose ID	Hose OD	Bend Radius		Per Ft.
1/4″	1/2″	2 1/2″	5633K21	$1.88
5/16″	9/16″	3 1/8″	5633K22	2.13

1/2″	3/4″	5″	5633K24	2.93
5/8″	7/8″	6 1/4″	5633K25	3.66
3/4″	1 1/32″	7 1/2″	5633K26	4.28

Choose-a-Color Buna-N

Use with air, water, and oil. Tube is Buna-N; cover is Buna-N blended with PVC. Hose is reinforced with an Aramid braid. Meets RMA Class A for oil resistance. **To Order:** Please specify hose length of 5-, 10-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet; also specify color: black, blue, gray, green, red, or yellow.

Hose ID	Hose OD	Bend Radius		Per Ft.
1/4″	1/2″	1 1/2″	5288K11	$1.17
3/8″	5/8″	2 1/4″	5288K12	1.45

3/4″	1 1/32″	4 1/2″	5288K35★	2.86

★ Color is black.

High-Pressure Buna-N

Use with air, water, oil, and glycol. The tube and cover are Buna-N and reinforced with an Aramid braid. Hose is MSHA (Mine Safety and Health Administration) compliant for flame resistance. Color is black. **To Order:** Please specify hose length of 5-, 10-, 20-, 25-, 30-, or 50-ft., or any length you choose up to 100 feet.

Hose ID	Hose OD	Bend Radius		Per Ft.

Brass Push-On Hose Fittings

- Maximum Pressure @ 72° F: 350 psi
- Temperature Range: –20° to +150° F
- Hose: Use hose for push-on fittings (see above)
- Clamps: None required

No need for clamps or ferrules—just push these fittings into hose for push-on fittings (sold above) until the yellow plastic ring covers the hose end. Use with air and water. Fittings are made from brass, which has good corrosion resistance. Not rated for vacuum.

Note: These fittings are only for use with the hose for push-on fittings shown above. To ensure proper operation, the hose must be pushed in all the way, with the hose end completely concealed by the ring.

Hose-to-Threaded Pipe Connectors— Also known as hose nipples. They're barbed on one end and threaded on the other. *Easy-install adapters* rotate until they are tightened. NPTF (Dryseal) threads are compatible with NPT threads; female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

Hose-to-Threaded Flared Connectors— Connect your hose to flared tubing. *Female adapters* have a dual-angle seat that accepts both 37° JIC and 45° SAE male flared fittings. All have UNF straight threads.

Hose-to-Hose Connectors— Also called hose menders and splicers, use these to repair damaged hose and to connect two pieces of hose.

Type 316 Stainless Steel Push-On Hose Fittings

- Maximum Pressure @ 72° F: 350 psi
- Temperature Range: −20° to +150° F
- Hose: Use hose for push-on fittings (see page 292)
- Clamps: None required

You'll get excellent corrosion resistance with these Type 316 stainless steel fittings. They install easily on hose for push-on fittings (sold on pg. 292) without the need for clamps or ferrules—just push them into the hose until the blue plastic ring covers the hose end. Use them with air, water, and coolants. Not rated for vacuum.

Note: These fittings are only for use with the hose for push-on fittings shown on page 292. To ensure proper operation, the hose must be pushed in all the way, with the hose end completely concealed by the ring.

Hose-to-Threaded Pipe Connectors— Also called hose nipples, they're barbed on one end and threaded on the other.

Hose-to-Threaded Flared Connectors— Also known as easy-install fittings, the threaded end rotates until tightened for easy connection to 37° JIC male flared fittings. All have UNF straight threads.

Hose-to-Hose Connectors— Also called hose menders and splicers, use these to repair damaged hose and to connect two pieces of hose.

Made from white nylon, these lightweight fittings install easily on hose for push-on fittings (sold on page 292) without the need for clamps or ferrules—just push them into the hose until the white nylon ring covers the hose end. They meet FDA CFR21 177.1500 for use with food and beverage. Not for use with compressed air or gas. Not rated for vacuum.

Note: These fittings are only for use with the hose for push-on fittings shown on pg. 292. To ensure proper operation, the hose must be pushed in all the way, with the hose end completely concealed by the ring.

Hose-to-Threaded Pipe Connectors— Also called hose nipples. They're barbed on one end and threaded on the other.

Hose-to-Hose Connectors— Also known as hose menders and splicers, use these to repair damaged hose and to connect two pieces of hose.

Hose-to-Hose Connectors

Couplings

For Hose ID	Pkg. Qty.		Per Pkg.

Installation Tool for Push-On Hose Fittings

Installing push-on fittings is a breeze with this tool. Simply use the built-in cutter to squarely cut 1/4"-3/4" push-on style hose without fraying. Then, clamp the hose into the tool's vise and apply light pressure on the handle to drive in the fitting. Tool has four 7/16" mounting holes (fasteners not included). Overall size is 13 1/2" Lg. × 6 7/8" Ht. × 2 3/8" Dp.

53685K11 ..... Each $239.62

Hose Washers & Hydraulic Hose Fittings

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″

Brass Straight-to-Taper Thread Hose Fittings

- Maximum Pressure @ 72° F: 250 psi
- Temperature Range: –40° to +160° F
- Hose: Use rubber, EPDM, and PVC
- Clamps: Not required

Convert your hose with NPSM (National Pipe Straight Mechanical) threads to NPTF (Dryseal) threads. NPTF threads are compatible with NPT threads. Fittings are made from yellow brass for good corrosion resistance. Use with air, water, natural gas, gasoline, oil, and petroleum products. Not rated for vacuum.

Pipe Size, NPSM×NPTF	Adapters, Male Pipe	Each	Adapters, Female Pipe	Each
1/4″	4685T11	$1.30	4685T33	$2.18
3/8″	4685T12	2.08	4685T34	2.35
1/2″	4685T13	2.96	4685T35	2.98

Stainless Steel Swivel Water Hose Fittings

- Maximum Pressure @ 72° F: 3500 psi
- Temperature Range: 38° to 180° F
- Hose: Use hydraulic
- Clamps: Not required

Also called live swivels, these fittings rotate 360° before and after installation—this not only makes installation easier, but also eliminates the twisting that can cause premature hose failure. They're made from Type 416 stainless steel for good corrosion resistance and include a Buna-N (nitrile) seal. Use with water. Not rated for vacuum.

Pipe Size, NPT	Female Pipe × Male Pipe	Each
1/2″	5273K21	$36.48
3/8″	5273K23	36.48

Hose Washers

Red rubber is the most common gasket; use with garden hose couplings. ***Black neoprene*** has good oil resistance. ***Black SBR rubber*** is for use with water; it is not recommended for use with oil.

For Hose ID	Washer OD	Washer ID	Washer Thick.	Pkg. Qty.		Per Pkg.

Hydraulic Hose Fittings

- Maximum Pressure: See below
- Temperature Range: Zinc-Plated Steel: Not Rated Type 316 SS: –425° to +1200° F
- Hose: Use hydraulic
- Clamps: Not required

Fittings rotate 360° until they are tightened—this prevents the hose from kinking to make installation easier, especially in tight spaces. They meet SAE J514. Use with hydraulic oil. Not rated for vacuum. Female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT threads.

Zinc-plated steel offers fair corrosion resistance. The nonswiveling end has NPTF threads; NPTF threads are compatible with NPT threads.

Type 316 stainless steel offers excellent corrosion resistance. The nonswiveling end has NPT threads.

Screw-On Hydraulic Hose Fittings and Hose

- Maximum Pressure: See hose below
- Temperature Range: –40° to +212° F
- Hose: Use hose shown below
- Clamps: Not required

Use these two-piece fittings with the hose sold below—fittings thread directly onto the hose without the need for a separate adapter. They're made from zinc-plated steel for fair corrosion resistance. Use with hydraulic oil. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Fittings are only for use with the hose sold below. For installation, you'll need a vise and a wrench. Start by separating the two pieces of the fitting. Secure the socket portion of the fitting in the vise. Lubricate the end of the hose and screw it into the socket counterclockwise until it bottoms out, then back out a ½ turn. Now lubricate the nipple portion of the fitting and screw it into the other end of the socket using a wrench until the hex shoulder is against the socket.

Hose comes in a maximum continuous length of 100 ft. Please order hose in 5-ft. increments.

Also Available: Fittings marked with a ▲ also come in Type 316 stainless steel, which offers excellent corrosion resistance. Please ask for 5333K1 and specify the corresponding part number from the listing below.

Crimp-On Hydraulic Hose Fittings and Hose

- Maximum Pressure: See hose below
- Temperature Range: –40° to +212° F
- Hose: Use hose shown below
- Clamps: Not required

Permanently attach fittings to hose using the swage installation tool (all sold separately). The fittings, pushers, and dies are all made from zinc-plated steel for fair corrosion resistance. Use with hydraulic oil. Vacuum is 28″ Hg @ 72° F.

Fittings are only for use with the hose sold below. NPTF (Dryseal) threads are compatible with NPT threads.

Hose comes in a maximum continuous length of 100 ft. Please order hose in 5-ft. increments.

Swage Installation Tool— Made from aluminum, this tool is 15¾″ Ht. × 5″ Wd. and has two 7/16″ dia. mounting holes (fasteners not included). For operation, you'll need a 1½″ open-end box wrench, plus a pusher and a die that both correspond to the fitting size you want to install.

ⓘ For instructions on how to install these fittings with the swage tool, go to mcmaster.com and search for **5243KAC**.

Hose Couplings

For information about selecting pipe size, see pages 2-3.

Please Read Before Ordering: Pipe size is the accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″
Pipe Size	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″

High-Pressure Threaded Couplings

- Maximum Pressure @ 72° F: 600 psi
- Temperature Range: –20° to +450° F
- Hose: For steam, use steam hose; for all other media, use rubber hose
- Clamps: Use interlocking clamps (included)

Also known as boss couplings and ground-joint couplings. Made for high-pressure applications, these couplings combine a zinc-plated steel barbed hose fitting with an interlocking clamp. Use with air, water, steam, and oil. Vacuum rating is 30″ Hg @ 72° F. Male NPSM (National Pipe Straight Mechanical) threads are compatible with female NPSM and NPSH (National Pipe Straight Hose) threads; they are not compatible with NPT threads.

Couplings

Couplings include an interlocking clamp, which firmly grips your hose as it locks onto the ring of the barbed fitting. The interlocking clamps are not reusable. Couplings with a *female pipe* connection also have a zinc-plated malleable iron wing nut and a zinc-plated steel hex bushing.

For Hose ID	Clamp Fits Hose OD	Pipe Size, NPT	Male Pipe	Each	Female Pipe	Each
1/2″	15/16″-1 1/16″	1/2″	5360K23	$12.02	5360K43	$28.28

Accessory

Also called double spuds. Use these to connect two female couplings—just replace the hex bushing from the female coupling with one of these. Made from zinc-plated steel with a polymer seal on both ends.

Hex Nipples, Male Pipe (NPSM) × Male Pipe (NPSM)

For Hose ID		Each
1/2″	5360K51	$24.17
3/4″, 1″	5360K52	24.34

Replacement Parts

Hex bushings are also called female spuds. Made from zinc-plated steel with a polymer seal that grips onto the rounded head of the barbed fitting.

Interlocking clamps consist of two zinc-plated malleable iron halves held together by two zinc-plated steel nuts and bolts. The clamps and bolts are not reusable.

Hex Bushings, Female Pipe (NPT) × Male Pipe (NPSM)

Pipe Size		Each
1/2″	5360K61	$12.55

Grip-Lock Hose Couplings

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range:
  Zinc-Plated Steel and
  Type 303 SS: –40° to +250° F;
  Brass: –20° to +175° F
- Hose: Use nylon and rubber air hose
- Clamps: Use interlocking clamps (see above)

Also called Bowes couplings, push a plug and a socket together with a quarter turn for a leak-free connection; a spring-loaded locking sleeve prevents accidental disconnection. The grip-lock ends are all 3/4″ diameter and are compatible with Dixon Dix-Lock series and Perfecting N-series couplings.

Couplings include a Buna-N (nitrile) seal. All of the plugs mate with all of the sockets regardless of the pipe size or barb size. Couplings meet the dimensional requirements of MIL-A-A-50431A and MIL-C-3486B. Use with air. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel has fair corrosion resistance. Vacuum rating is 22″ Hg @ 72° F.

Brass has good corrosion resistance. Not rated for vacuum.

Type 303 stainless steel has very good corrosion resistance. Vacuum rating is 22″ Hg @ 72° F.

Replacement Gaskets

Made of Buna-N (nitrile), these gaskets fit all of the grip-lock hose couplings in this presentation. Package quantity is 10.

5280K59 ..... **Per Pkg.** $9.50

Warning! There is no valve in these couplings. Flow should be stopped before disconnecting your hose line. We recommend using a whip check (see page 246) to prevent accidental hose whipping.

For information about selecting pipe size, see pages 2-3.

Double Grip-Lock Hose Couplings

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +250° F
- Hose: Use rubber
- Clamps: For couplings with a barbed end, use band clamps (see pgs. 283-285) or hose ferrules (see pg. 290)

Also known as Thor couplings, these couplings have two locking points to give you twice the gripping power of the single grip-lock couplings. Simply push a plug and a socket together with a quarter turn for a leak-free connection. All are compatible with Dixon Dual-Lock series, National A-series, and Perfecting P-series couplings. They are made from zinc-plated steel for fair corrosion resistance; they include a black Buna-N (nitrile) seal. Use with air and water. Vacuum rating is 22″ Hg @ 72° F. NPTF (Dryseal) threads are compatible with NPT threads.

All of the plugs mate with all of the sockets regardless of pipe size or barb size. ***Sockets*** have a spring-loaded locking sleeve that prevents accidental disconnection; both the spring and the sleeve are made of bronze.

Double Grip-Lock Plugs

Pipe Size, NPTF	*Male Pipe*	Each	*Female Pipe*	Each
3/8″	6539K66	$9.51	6539K76	$11.21

3/4″	6539K68	9.99	6539K78	12.44
1″	6539K69	10.68	6539K79	15.79

Double Grip-Lock Sockets

Pipe Size, NPTF	*Male Pipe*	Each	*Female Pipe*	Each	For Hose ID	*Barbed*	Each
3/8″	6539K36	$15.82	—	—	3/8″	6539K56	$17.29
1/2″	6539K37	15.82	6539K47	$19.14	1/2″	6539K57	15.84
3/4″	6539K38	16.71	6539K48	17.85	3/4″	6539K58	16.82
					1″	6539K59	21.65

Accessories

Optional locking rings attach onto the sockets to prevent accidental disconnection. Pkg. qty. is 5.

6539K82 ..... **Per Pkg.** $2.25

Replacement gaskets are made of black Buna-N (nitrile). They fit all of the double grip-lock hose couplings shown above. Package quantity is 10.

6539K83 ..... **Per Pkg.** $7.75

Twist-Claw Hose Couplings

- Maximum Pressure @ 70° F: 150 psi
- Temperature Range: –20° to +160° F
- Hose: Use rubber
- Clamps: For couplings with a barbed end, use band clamps (see pgs. 283-285) or interlocking clamps (see pg. 296)

Also known as universal hose couplings and Chicago couplings, all of these couplings have an identical claw-style head that allows you to connect any two sizes or styles together. Simply push two couplings together with a quarter twist for a leak-free connection. They are compatible with Dixon "Air King" series. Use with air and water. Vacuum rating is 30″ Hg @ 72° F.

Malleable iron has poor corrosion resistance. ***Brass*** has good corrosion resistance. ***Type 316 stainless steel*** has excellent corrosion resistance. All couplings are furnished with a lanyard and safety clip.

Also Available: Spring-loaded locking twist-claw hose couplings that prevent accidental disconnection. Made from ductile iron, they come in male pipe and barbed styles in 1/2″, 3/4″, and 1″ sizes, as well as female pipe style in 1/2″ and 3/4″ sizes. Please ask for 7149K1 and specify the style and size.

Accessories

Triple Connector— Allows you to connect one inlet to two outlets. Made of malleable iron with a synthetic rubber gasket.

5344K53 ..... **Each** $13.94

Blank End— Use these like a plug to temporarily close off an outlet. Made of malleable iron with a synthetic rubber gasket. A lanyard and safety clip are included.

5344K51 ..... **Each** $7.84

Replacement Parts

Gaskets— Made of SBR rubber, these gaskets fit all of the 5344K series couplings. Package quantity is 10.

5344K44 ..... **Per Pkg.** $3.42

Safety Clip— Furnished with a lanyard.

5344K81 ..... **Each** $0.49

Large-Diameter Twist-Claw Hose Couplings

- Maximum Pressure @ 72° F: 110 psi
- Temperature Range: –20° to +160° F
- Hose: Use rubber
- Clamps: Not required

Push two couplings together with a quarter twist for a leak-free connection on large-diameter hose. The 1 1/4″ and 1 1/2″ sizes mate interchangeably; the 2″ size only mates with other 2″ couplings. All are made from malleable iron with a black painted finish, which has good corrosion resistance. Each includes a natural rubber gasket and a safety clip. Use with air and water; not recommended for steam service. Not rated for vacuum.

Pipe Size, NPT	*Male Pipe*	Each	*Female Pipe*	Each	*Replacement Gaskets*	Each
1 1/4″	5368K21	$47.84	5368K11	$44.40	5368K18	$16.43
1 1/2″	5368K22	47.84	5368K12	44.40	5368K18	16.43
2″	5368K23	61.21	5368K13	56.90	5368K29	16.43

Warning! There is no valve in these couplings. Flow should be stopped before disconnecting your hose line. We recommend using a whip check (see page 246) to prevent accidental hose whipping.

How to Order Quick-Disconnect Hose Couplings

Measure A and B to Determine Coupling Size

1. **Determine the coupling shape.** To make a connection, you'll need a plug and a socket with the same shape; however, the coupling's shape is determined by the plug's end. Compare your plug's end to the illustrations below.
2. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the "A" and "B" dimensions as shown at left, and match the measurements to those found in the individual presentations for your specific coupling shape.
3. **For threaded connections, determine the pipe size.** Pipe size is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD is 1 3/8″ and the corresponding pipe size is 1″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″

Quick-Disconnect Hose Coupling Shape Selection Chart

While many of the quick-disconnect couplings are named after their original manufacturer, they're now made by most coupling manufacturers.

Industrial-Shape Size-Identification Kit

Identifying the couplings around your shop doesn't have to be a hassle. This kit contains the most popular shape of plug (industrial) in four coupling sizes (1/4, 3/8, 1/2, and 3/4), so you can determine the size of your couplings without the need for measuring. The plugs in this kit are made from zinc-plated steel and the size is clearly labeled on each of them.

5597K12 ..... **Each** $11.37

Industrial-Shape Hose Coupling Sets

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +250° F
- Hose: Use flexible PVC and rubber

Set includes one plug and one socket. Plug shown has male pipe connection; socket has female pipe connection.

We've paired the most popular plugs and sockets for these convenient sets—simply select the threaded-end configuration that best suits your needs. Also known as industrial exchange couplings, these couplings have a brass socket and a zinc-plated steel sleeve and plug. Use with air. Couplings are single shut-off style, so there is a valve in the socket but not the plug. They meet the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109); the plugs also meet ISO 6150/B and ANSI T3.20.14. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Sockets are sleeve-lock style. To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. All have a Buna-N (nitrile) seal.

Pipe Size, NPTF	Male Pipe on Both Ends Per Set	Female Pipe on Both Ends Per Set	Male Pipe Plug × Female Pipe Socket Per Set	Female Pipe Plug × Male Pipe Socket Per Set
Coupling Size: 1/4				
1/4″	**5602K11** $5.99	**5602K14** $6.32	**5602K12** $6.05	**5602K13** $6.26

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Industrial-Shape Hose Couplings

Coupling Size	(A)	(B)
1/4	5/16″	3/16″
3/8	7/16″	5/16″
1/2	9/16″	3/8″
3/4	13/16″	5/16″

- Maximum Pressure @ 72° F: 300 psi for all, except 145 psi for angled swivel plugs
- Temp. Range: –40° to +250° F for all, except +20° to +140° F for angled swivel plugs
- Hose: Use flexible PVC and rubber with all, except *push on* must be used with hose for push-on fittings (see page 292)
- Clamps: For barbed couplings, use worm-drive clamps (see pages 274-277) or hose ferrules (see page 290)

The most popular style of quick-disconnect hose couplings, you may also know these as industrial interchange couplings. Use with air. All industrial-shape plugs are compatible with any of the industrial-shape sockets of the same coupling size, regardless of the pipe or barb size. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. ***Threaded*** couplings with NPTF (Dryseal) threads are compatible with NPT threads. ***Push-on*** couplings must be used with hose for push-on fittings (see page 292). All *1/4* and *1/2 coupling sizes* meet the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109). Not rated for vacuum.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Brass*** has good corrosion resistance and low wear resistance.

Plugs

Also known as nipples. All plugs meet ANSI T3.20.14; the 1/4, 3/8, and 1/2 coupling sizes also meet ISO 6150/B.

Coupling Size	Threaded, Male Pipe: Pipe Size, NPTF		Each	Threaded, Female Pipe: Pipe Size, NPTF		Each	Barbed: For Hose ID		Each	Push On: For Hose ID		Each

(Continued on following page)

Please Read Before Ordering: To determine the ***shape*** of your coupling, compare the end of your plug to the illustrations shown on page 298. You'll also find an illustration of the plug's shape in each presentation. ***Coupling size*** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2".

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"
Pipe Size	1/8"	1/4"	3/8"	1/2"

Industrial-Shape Hose Couplings *(Continued from previous page)*

- Maximum Pressure @ 72°F: 300 psi for all, except 145 psi for angled swivel plugs
- Temp. Range: –40° to +250°F for all, except +20° to +140°F for angled swivel plugs
- Hose: Use flexible PVC and rubber

Coupling Size	(A)	(B)
1/4	5/16"	3/16"
3/8	7/16"	5/16"
1/2	9/16"	3/8"
3/4	13/16"	5/16"

These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Use with air. All *1/4* and *1/2 coupling sizes* meet the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109). Not rated for vacuum.

Zinc- and ***chrome-plated steel*** have fair corrosion resistance and high wear resistance. ***Brass*** has good corrosion resistance and low wear resistance.

Also Available: Aluminum manifolds with quick-disconnect sockets. Please ask for 5595K22 for a round manifold with three sockets; please ask for 5595K21 for an inline manifold with four sockets.

Swivel Plugs

Eliminate hose kinking and unnecessary wrist strain. All plugs meet ISO 6150/B. ***Inline swivel plugs*** have a brass hex nut and a Buna-N (nitrile) seal. They meet ANSI T3.20.14. ***Angled swivel plugs*** allow for a 45° angle that pivots back and forth. They have a PTFE sealant on the threads and a chrome-plated steel dust cover on the rotating joint.

INLINE SWIVEL

Coupling Size	Pipe Size, NPT	Threaded, Male Pipe	Each
Zinc-Plated Steel Body with Brass Threads			
1/4	1/8"	4342K26	$4.42
1/4	1/4"	4342K27	4.03
1/4	3/8"	4342K24	4.42
3/8	1/4"	4342K25	7.30
3/8	3/8"	4342K28	5.78
1/2	1/2"	4342K29	7.88

ANGLED SWIVEL

Coupling Size	Pipe Size, NPT	Threaded, Male Pipe	Each
Chrome-Plated Steel			
1/4	1/8"	52435K31	$31.08
1/4	1/4"	52435K25	26.92
1/4	3/8"	52435K21	32.23
3/8	1/4"	52435K19	32.17
3/8	3/8"	52435K28	33.29

Plug with British Standard Threads

Plugs are also known as nipples. This plug meets ISO 6150/B. It has BSPP (British Standard Pipe Parallel) threads, which are also known as G threads.

Coupling Size	Pipe Size, BSPP	Threaded, Female Pipe	Each
Zinc-Plated Steel			
1/4	1/4"	1283T24	$1.32

Sleeve-Lock Sockets with British Standard Threads

To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. All have a zinc-plated steel sleeve and a Buna-N (nitrile) seal. Connections are BSPT (British Standard Pipe Taper) threads, which are also known as R threads, or BSPP (British Standard Pipe Parallel) threads, which are also known as G threads.

Coupling Size	Pipe Size, BSPT	Threaded, Male Pipe	Each
Brass			
1/4	1/4"	1283T17	$5.62
1/4	3/8"	1283T18	6.58

Coupling Size	Pipe Size, BSPP	Threaded, Female Pipe	Each
Brass			
1/4	1/4"	1283T12	$5.62
1/4	3/8"	1283T13	6.58

Nickel-Plated Industrial-Shape Hose Couplings

- Maximum Pressure @ 72°F: 300 psi
- Temp. Range: –40° to +250°F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pages 274-277) or hose ferrules (see page 290)

Nickel plating provides better corrosion resistance than plain steel or brass. Also known as industrial interchange couplings. Use with air. All industrial-shape plugs are compatible with any of the industrial-shape sockets of the same coupling size, regardless of the pipe or barb size. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. The *1/4 coupling size* meets the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109); the *3/8 coupling size* meets ISO 6150/B. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs

Plugs are also known as nipples.

Pipe Size, NPTF	Male Pipe (THREADED)	Each	Female Pipe (THREADED)	Each	For Hose ID (BARBED)	Each
Nickel-Plated Steel						
Coupling Size: 1/4 (A=5/16"; B=3/16")						
1/4"	6050T14	$2.37	6050T15	$2.60	1/4" 6050T16	$3.24
3/8"	6050T34	3.93	6050T35	6.38	3/8" 6050T36	4.56
Coupling Size: 3/8 (A=7/16"; B=5/16")						
1/4"	6050T17	4.60	6050T18	4.95	—	—

Sleeve-Lock Sockets

To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. Sockets have a nickel-plated steel sleeve and a Buna-N (nitrile) seal.

Pipe Size, NPTF	Male Pipe (THREADED)	Each	Female Pipe (THREADED)	Each	For Hose ID (BARBED)	Each
Nickel-Plated Brass

Coupling Size: 3/8 (A=7/16"; B=5/16")						
1/4"	6050T21	18.49	6050T22	18.31	—	—

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Stainless Steel Industrial-Shape Hose Couplings

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +250° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

Made from Type 303 stainless steel, these couplings offer excellent corrosion resistance and high wear resistance. They're also known as industrial interchange couplings. Use with air and water. All industrial-shape plugs are compatible with any of the industrial-shape sockets of the same coupling size, regardless of the pipe or barb size. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. The *1/4* and *1/2 coupling sizes* meet the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109). Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs

Also known as nipples, plugs meet ISO 6150/B and ANSI 3.20.14.

Pipe Size, NPTF	Male Pipe Each	Female Pipe Each	For Hose ID	Each
	THREADED		BARBED	
Coupling Size: 1/4 (A=5/16"; B=3/16")				
1/4"	6718K26 $4.21	6718K52 $5.21	1/4"	6718K72 $5.50

1/2"	6718K83 46.60	6718K86 48.31	1/2"	6718K89 39.96

Push-to-Connect Sockets

To connect, push plug into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. Sockets have a Buna-N (nitrile) seal.

Pipe Size, NPTF	Male Pipe Each	Female Pipe Each	For Hose ID	Each
	THREADED		BARBED	
Coupling Size: 1/4 (A=5/16"; B=3/16")				
1/4"	6718K91 $29.75	6718K94 $31.27	1/4"	6718K97 $31.27
3/8"	6718K59 30.25	6718K58 32.69	3/8"	6718K64 32.69
Coupling Size: 3/8 (A=7/16"; B=5/16")				
3/8"	6718K92 45.75	6718K95 42.75	3/8"	6718K98 40.81
Coupling Size: 1/2 (A=9/16"; B=3/8")				
1/2"	6718K93 52.73	6718K96 55.04	1/2"	6718K99 54.42

Push-Button Industrial-Shape Hose Sockets

- Max. Pressure @ 72° F: 175 psi
- Temp. Range: 5° to 160° F
- Hose: Use PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

A push of the button is all it takes to disconnect your hose line. They're also known as industrial interchange couplings. Use with air. All of these industrial-shape sockets are compatible with any industrial-shape plug of the same coupling size, regardless of the pipe or barb size. They're made from nonmarring nylon, which has good corrosion resistance and high wear resistance. They have zinc-plated steel threads or barbs (unless noted), a shut-off valve, and a Buna-N (nitrile) seal. Sockets meet ISO 6150/B; the *1/4 coupling size* also meets the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109). Not rated for vacuum.

Standard Push-Button Sockets

To connect, firmly push the plug into the socket until you hear a "click." To disconnect, push the button and the plug will eject.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each	For Hose ID	Each
	THREADED		BARBED	
Coupling Size: 1/4 (A=5/16"; B=3/16")				
1/4"	5136T13 $23.78	5136T11 $21.47	1/4"	5136T15 $23.78
3/8"	5136T14 23.78	5136T12 23.78	3/8"	5136T16 23.78
Coupling Size: 3/8 (A=7/16"; B=5/16")				
3/8"	5136T19 43.07	5136T17 42.49	3/8"	5136T22 43.07
1/2"	5136T21 43.07	5136T18 42.49	—	—

Safety Push-Button Sockets

To connect, firmly push the plug into the socket until you hear a "click." To disconnect, push the button to purge the compressed air, which will release the plug. Barbs are made of aluminum.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each	For Hose ID	Each
	THREADED		BARBED	
Coupling Size: 1/4 (A=5/16"; B=3/16")				
1/4"	9585K11 $30.01	9585K17 $29.37	1/4"	9585K24 $31.15
3/8"	9585K12 30.01	9585K18 30.01	3/8"	9585K25 31.15
Coupling Size: 3/8 (A=7/16"; B=5/16")				
1/4"	9585K14 48.76	9585K21 47.07	—	—
3/8"	9585K15 48.76	9585K22 47.07	3/8"	9585K26 53.16
1/2"	9585K16 48.76	9585K23 47.07	1/2"	9585K27 53.16

Safety Vent Industrial-Shape Hose Sockets

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +225° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

Make safety your first priority with these twist-to-disconnect sockets—pressure is released before you disconnect your hose line, so they minimize the chance of hose whip. They're also known as industrial interchange couplings. Use with air. All of these industrial-shape sockets are compatible with any industrial-shape plug of the same coupling size, regardless of the pipe or barb size. They're made from zinc-plated steel, which has fair corrosion resistance and high wear resistance. All have a shut-off valve and a Buna-N (nitrile) seal. The *1/4* and *1/2 coupling sizes* meet the dimensional requirements of Fed. Spec. A-A-59439 (formerly MIL-C-4109). Vacuum is 26" Hg @ 72° F.

To connect, insert the plug into the socket and slide the sleeve forward until it locks. To disconnect, slide the sleeve back while twisting it left and right (the twisting action vents the downstream air), then remove the plug.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each	For Hose ID	Each
	THREADED		BARBED	
Coupling Size: 1/4 (A=5/16"; B=3/16")				
1/4"	9582K14 $17.07	9582K33 $17.00	1/4"	9582K54 $18.26
Coupling Size: 3/8 (A=7/16"; B=5/16")				
3/8"	9582K17 20.53	9582K39 20.13	3/8"	9582K56 21.63
Coupling Size: 1/2 (A=9/16"; B=3/8")				
1/2"	9582K22 23.49	9582K41 23.74	1/2"	9582K58 23.78

Please Read Before Ordering: To determine the ***shape*** of your coupling, compare the end of your plug to the illustrations shown on page 298. You'll also find an illustration of the plug's shape in each presentation. ***Coupling size*** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2".

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"
Pipe Size	1/8"	1/4"	3/8"	1/2"

ARO-Shape Hose Couplings

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +225° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pages 274-277) and hose ferrules (see page 290)

All of the ARO-shape plugs are compatible with any of the ARO-shape sockets of the same coupling size, regardless of the pipe or barb size. Use with air. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Vacuum rating is 26" Hg at 72° F.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Brass*** has good corrosion resistance and low wear resistance. ***Type 303 stainless steel*** has very good corrosion resistance and high wear resistance.

Also Available: Nickel-plated steel plugs and nickel-plated brass sockets. Please ask for 5621K1 and specify plug or socket; also specify the corresponding part number from the zinc-plated steel plugs or brass sockets.

Plugs

Plugs are also known as nipples.

Lincoln-Shape Hose Couplings

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +240° F
- Hose: Use flexible PVC, nylon, and rubber

All of these Lincoln-shape plugs are compatible with any of the Lincoln-shape sockets shown below. Use with air. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. All are made of zinc-plated steel, which has fair corrosion resistance and high wear resistance. Not rated for vacuum.

Plugs

Plugs are also known as nipples.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each
Coupling Size: 1/4 (A=9/32"; B=3/4")		
1/8"	91455K51 $3.00	91455K54 $2.85
1/4"	91455K31 2.19	91455K36 2.68

Sleeve-Lock Sockets

To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. All sockets have a Buna-N (nitrile) seal.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each
Coupling Size: 1/4 (A=9/32"; B=3/4")		
1/8"	91455K52 $9.06	91455K53 $9.06
1/4"	91455K42 9.53	91455K47 8.56

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Tru-Flate-Shape Hose Couplings

- Maximum Pressure @ 72° F: 300 psi for all, except 175 psi for push-button sockets
- Temperature Range: –40° to +250° F for all, except +5° to +160° F for push-button sockets
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

Also called automotive couplings, all of the Tru-Flate-shape plugs are compatible with any of the Tru-Flate-shape sockets of the same coupling size, regardless of the pipe or barb size. Use with air. Couplings are single-shut-off style, so there's a valve in the socket but not the plug. Vacuum rating is 26″ Hg @ 72° F, unless noted. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Brass*** has good corrosion resistance and low wear resistance. ***Nylon*** is nonmarring; it has excellent corrosion resistance and high wear resistance.

Plugs

Plugs are also known as nipples.

▲ Vacuum is not rated.

European-Shape Hose Couplings

- Maximum Pressure @ 72° F: 232 psi
- Temperature Range: –4° to +212° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

With a virtually unobstructed internal air path, these couplings provide a higher flow rate than other coupling shapes of the same size. Use with air. All of the European-shape plugs are compatible with any of the European-shape sockets of the same coupling size, regardless of the pipe or barb size. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Not rated for vacuum.

Plugs

Also known as nipples, plugs are made from zinc-plated steel, which has fair corrosion resistance and high wear resistance.

Pipe Size, NPT	Male Pipe	Each	Female Pipe	Each	For Hose ID	Each
Coupling Size: 1/4 (A=3/8″; B=3/16″)						
1/4″	53445K16	$2.67	53445K21	$4.42	1/4″	53445K94 $3.09
3/8″	53445K18	2.89	53445K92	5.67	3/8″	53445K96 3.20
1/2″	53445K24	8.13	53445K98	7.64	1/2″	53445K85 3.69

Push-to-Connect Sockets

To connect, push plug into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. Made from zinc-plated brass, which has good corrosion resistance and low wear resistance. All have a Buna-N (nitrile) seal.

Pipe Size, NPT	Male Pipe	Each	Female Pipe	Each	For Hose ID	Each
Coupling Size: 1/4 (A=3/8″; B=3/16″)						
1/4″	53445K15	$16.27	53445K19	$16.27	1/4″	53445K93 $15.56
3/8″	53445K17	16.27	53445K91	19.44	3/8″	53445K95 15.56
1/2″	53445K86	21.80	53445K97	22.29	1/2″	53445K99 15.78

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Measure A and B to Determine Coupling Size

Please Read Before Ordering: To determine the ***shape*** of your coupling, compare the end of your plug to the illustrations shown on pg. 298. An illustration of the plug's shape is also in each presentation. ***Coupling size*** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2".

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"
Pipe Size	1/8"	1/4"	3/8"	1/2"

Universal Hose Sockets

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +250° F
- Hose: For *threaded* sockets, use flexible PVC and rubber hose; *push-on* sockets must be used with hose for push-on fittings (see page 292)

Talk about versatile—one socket accommodates five popular plug shapes. These push-to-connect sockets accept any industrial-, ARO-, Lincoln-, Tru-Flate-, or European-shape plug with a 1/4 coupling size. To connect, push plug into socket until you hear a "click"; to disconnect, slide sleeve forward until the plug ejects. Use with air. They're made from brass, which has good corrosion resistance and low wear resistance. All have a shut-off valve and a Buna-N (nitrile) seal. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

For industrial-shape plugs, see pages 299-301; for ARO- and Lincoln-shape plugs, see page 302; for Tru-Flate- and European-shape plugs, see page 303.

Push-on sockets must be used with hose for push-on fittings (see page 292). To install, push the socket firmly into the push-on hose until the yellow plastic ring completely covers the hose end.

Pipe Size, NPTF	Male Pipe Each	Female Pipe Each	For Hose ID	Each
Coupling Size: 1/4				
1/4"	53475K31 $8.84	53475K21 $8.84	1/4"	53475K39 $10.45
3/8"	53475K33 9.71	53475K23 9.71	3/8"	53475K41 9.33

Japanese-Shape Hose Couplings

- Maximum Pressure @ 72° F: 232 psi
- Temperature Range: –4° to +212° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

Japanese-shape plugs are compatible with any of the Japanese-shape sockets of the same coupling size, regardless of the pipe or barb size. Use with air. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. All are made from zinc-plated steel, which has fair corrosion resistance and high wear resistance. Not rated for vacuum.

Plugs

Plugs are also known as nipples.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each	For Hose ID	Each
Coupling Size: 1/4 (A=7/16"; B=7/32")				
1/4"	53425K63 $3.26	53425K73 $3.88	1/4"	53425K78 $2.40
3/8"	53425K65 3.55	53425K75 9.48	3/8"	53425K79 2.40

Push-to-Connect Sockets

To connect, push plug into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. All have a Buna-N (nitrile) seal.

Pipe Size, NPT	Male Pipe Each	Female Pipe Each	For Hose ID	Each
Coupling Size: 1/4 (A=7/16"; B=7/32")				
1/4"	53425K23 $19.06	53425K33 $18.23	1/4"	53425K76 $16.08
3/8"	53425K25 19.06	53425K35 18.23	3/8"	53425K77 16.08

Compact Hose Couplings

- Maximum Pressure @ 72° F: 500 psi
- Temperature Range: –40° to +250° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

A slim body makes these plugs and sockets great for use in tight spaces. Use with air and water. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Brass*** has good corrosion resistance and low wear resistance.

Plugs

Also known as nipples, these plugs are only for use with the sockets in this presentation.

Pipe Size, NPTF	Male Pipe Each	Female Pipe Each	For Hose ID	Each
Brass				
Coupling Size: 1/8 (A=7/32"; B=3/32")				
1/8"	53465K22 $4.34	53465K42 $4.66	1/8"	53465K62 $4.97
Zinc-Plated Steel				
Coupling Size: 1/4 (A=5/16"; B=7/32")				
1/4"	53465K24 1.71	53465K44 2.10	1/4"	53465K64 3.38

Push-to-Connect Sockets

To connect, push plug into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. All have a Buna-N (nitrile) seal. These sockets are only for use with the plugs in this presentation.

Pipe Size, NPTF	Male Pipe Each	Female Pipe Each	For Hose ID	Each
Brass				
Coupling Size: 1/8 (A=7/32"; B=3/32")				
1/8"	53465K12 $12.79	53465K32 $12.79	1/8"	53465K52 $14.18
Coupling Size: 1/4 (A=5/16"; B=7/32")				
1/4"	53465K14 14.18	53465K34 14.18	1/4"	53465K54 15.07

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Schrader-Shape Hose Couplings

- Maximum Pressure @ 72° F: 300 psi
- Temperature Range: –40° to +225° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

All of the Schrader-shape plugs are compatible with any of the Schrader-shape sockets of the same coupling size, regardless of the pipe size or barb size. Use with air; Type 303 stainless steel is also for use with water. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Vacuum rating is 26″ Hg @ 72° F.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Type 303 stainless steel*** has very good corrosion resistance and high wear resistance. ***Aluminum*** has good corrosion resistance and low wear resistance.

Plugs

Plugs are also known as nipples.

Pipe Size, NPT	Male Pipe	Each	Female Pipe	Each	For Hose ID	Each
Zinc-Plated Steel						
Coupling Size: 1/4 (A=5/16″; B=3/4″)						
1/4″	3124K46	$1.87	3124K52	$2.09	1/4″ 3124K74	$3.19

1/2″	3124K64	3.64	—	—	1/2″ 3124K76	5.00
Type 303 Stainless Steel						
Coupling Size: 1/4 (A=5/16″; B=3/4″)						
1/4″	5606T13	5.13	5606T14	5.94	— —	—

Push-to-Connect Sockets

To connect, push plug into socket until you hear a "click." To disconnect, twist sleeve and pull out the plug; this twist-to-disconnect feature reduces the chance of accidental disconnection if the hose gets snagged. All have a Buna-N (nitrile) seal. Aluminum sockets have a zinc-plated steel sleeve; Type 303 stainless steel have a Type 303 stainless steel sleeve.

Pipe Size, NPT	Male Pipe	Each	Female Pipe	Each	For Hose ID	Each
Aluminum						
Coupling Size: 1/4 (A=5/16″; B=3/4″)						
1/4″	3124K59	$12.98	3124K55	$11.90	1/4″ 3124K75	$13.49
Coupling Size: 1/2 (A=1/2″; B=7/8″)

Color and Shape Matched Hose Couplings

- Maximum Pressure @ 68° F: 500 psi
- Temperature Range: –4° to +210° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pgs. 274-277) or hose ferrules (see pg. 290)

Color	Shape
Blue	Hexagon
Brown	Triangle
Green	Circle
Red	Octagon

Eliminate the possibility of mixing hose lines. These couplings come in your choice of four colors; each color has its own unique shape, so only plugs and sockets of the same color will fit together. Use with air and water. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. They're made of brass, which has good corrosion resistance and low wear resistance. Vacuum rating is 28″ Hg @ 68° F. NPSF (National Pipe Straight Fuel) threads are compatible with NPT threads.

To Order: Please specify color: blue, brown, green, or red.

Plugs

Also known as nipples, plugs have a color-coded anodized aluminum ring.

Pipe Size, NPT	Male Pipe	Each	Thread Size, NPSF	Female Pipe	Each	For Hose ID	Each
Coupling Size: 1/4 (A=3/8″; B=3/16″)							
1/4″	8636T16	$20.80	1/4″-18	8636T18	$22.06	1/4″ 8636T21	$19.85
3/8″	8636T17	22.60	3/8″-18	8636T19	24.28	3/8″ 8636T22	21.90

Push-to-Connect Sockets

To connect, push plug into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. All have a color-coded anodized aluminum sleeve and a Buna-N (nitrile) seal.

Pipe Size, NPT	Male Pipe	Each	Thread Size, NPSF	Female Pipe	Each	For Hose ID	Each

Hose Couplings for Natural and LP Gas

- Maximum Pressure @ 72° F: 0.5 psi
- Temperature Range: –40° to +212° F
- Hose: Use hose rated for use with natural and LP gas

Connect and disconnect your gas line with ease. To make a connection, you'll need a plug and a socket from the listing at right with the same coupling size. These couplings are made of brass, which offers good corrosion resistance and low wear resistance. They are single-shut-off style, so there is a valve in the socket but not the plug. They meet CSA 6.9-M98 and ANSI Z21.41. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads. *Note*: These couplings are not compatible with any other style of coupling.

Plugs— Also known as nipples, these plugs have a heat-sensitive fuse that will stop gas flow in the event of a fire.

Sleeve-Lock Sockets— To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. All have a fluoroelastomer seal.

Plugs

Pipe Size, NPTF	Female Pipe	Each

Quick-Disconnect Couplings

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Please Read Before Ordering: To determine the ***shape*** of your coupling, compare the end of your plug to the illustrations shown on page 298. You'll also find an illustration of the plug's shape in each presentation. ***Coupling size*** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16″, the next highest OD is 3/4″ and the corresponding pipe size is 1/2″.

Threaded OD or ID	3/8″	1/2″	5/8″	3/4″	1″	1 3/8″	1 5/8″
Pipe Size	1/8″	1/4″	3/8″	1/2″	3/4″	1″	1 1/4″

High-Flow Hose Couplings

- Maximum Pressure: See below
- Temperature Range: –40° to +250° F
- Hose: Use nylon and rubber

There is no valve in either the plug or the socket, so these straight-through-style couplings allow maximum flow. Use with air and water. To be used together, plugs and sockets must have the same coupling size. They are compatible with Parker ST series, Hansen ST series, and Perfecting E series. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Brass*** has good corrosion resistance and low wear resistance. ***Type 303 stainless steel*** has very good corrosion resistance and high wear resistance.

Plugs— Also known as nipples.

Sleeve-Lock Sockets— To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. All sockets have a Buna-N (nitrile) seal.

Note: Pressure ratings given are for static (constant) pressure conditions.

Also Available: Replacement Buna-N seals. Please ask for 6537K87 and specify coupling size.

High-Flow Hose Couplings for Coolant

- Maximum Pressure @ 72° F: 200 psi
- Temperature Range: –90° to +400° F
- Hose: Use flexible PVC and rubber
- Clamps: For couplings with a barbed end, use worm-drive clamps (see pages 274-277) and low-profile clamps (see page 283)

Also known as coolant-line mold couplings, these couplings are straight-through style with no valve in either the plug or the socket to allow maximum flow. Use with coolants and water. To be used together, plugs and sockets must have the same coupling size. Unless indicated otherwise, they're made from brass, which offers good corrosion resistance and low wear resistance. All are compatible with Parker Moldmate, Foster FP and FS series, and Hansen FT series couplings. Vacuum rating is 27″ Hg @ 72° F. NPTF (Dryseal) threads are compatible with NPT threads. Female NPSM (National Pipe Straight Mechanical) threads are compatible with male NPT and NPTF threads.

Plugs

Plugs are also known as nipples. The *female pipe* plugs are made from zinc-plated steel, which has fair corrosion resistance and high wear resistance.

Coupling Size	(A)	(B)	Pipe Size, NPTF	THREADED Male Pipe	Each	THREADED Female Pipe	Each
1/4	3/8″	7/32″	1/4″	6739K52	$0.93	6739K55	$1.09

Warning! There is no valve in these couplings. Flow should be stopped before you disconnect your line.

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Plastic Hose Couplings

- Max. Pressure @ 68° F: Acetal: 145 psi; PVDF: 116 psi
- Temperature Range: Acetal: –4° to +176° F; PVDF: –4° to +250° F
- Hose: Use flexible PVC and rubber

Get the convenience of quick-disconnect couplings combined with the lighter weight of plastic. All of the plastic plugs are compatible with any of the plastic sockets listed here, regardless of the pipe size. These couplings are single-shut-off style, so there is a valve in the socket but not the plug. Vacuum rating is 28″ Hg @ 68° F.

Note: These couplings are not compatible with any other style of coupling.

Acetal has low wear resistance and resists humidity. Use with air and water. Color is black.

PVDF (polyvinylidene fluoride) has high wear resistance and resists ultraviolet light. Material is FDA compliant for use with food and beverage; you can also use these couplings with air and water. Color is white.

Plugs

Plugs are also known as nipples.

Coupling Size	(A)	(B)	Pipe Size, NPT	Male Pipe	Each	Female Pipe	Each
Acetal							
1/4	13/32″	13/32″	1/4″	4821K35	$3.96	4821K52	$5.21

International Standard (ISO 16028) Minimal-Spill Hose Couplings

- Maximum Pressure: See below
- Temperature Range: –40° to +250° F
- Hose: Use high-pressure reinforced hose, including SAE 100R1, 100R2, and 100R7

Also known as flush-face couplings, these couplings have a flat face that ensures minimal fluid loss when connecting and disconnecting your hose line. They're double-shut-off style, so there is a valve in both the plug and the socket. Use with hydraulic oil. To make a connection, you'll need a plug and a socket with the same coupling size. They are compatible with all couplings that meet ISO 16028 standards, such as Parker FEM series, Snap-Tite 74 series, and Perfecting HT series. These couplings are made of zinc-plated steel, which offers fair corrosion resistance and high wear resistance. Not rated for vacuum. Female NPSF (National Pipe Straight Fuel) threads are compatible with male NPT and NPTF (Dryseal) threads.

Plugs— Also known as nipples, these plugs have a Buna-N/PTFE bonded seal.

Push-to-Connect Sockets— To connect, push plug firmly into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. All sockets have a Buna-N (nitrile) seal.

Dust Caps and Dust Plugs— Made from black rubber, use these to keep contaminants out.

Note: Pressure ratings given are for static (constant) pressure conditions.

Warning: Never attempt to connect or disconnect couplings when operating at maximum pressure.

High-Pressure Minimal-Spill Hose Couplings

- Maximum Pressure: See below
- Temp. Range: –40° to +200° F
- Hose: Use rubber

Here are the highest pressure minimal-spill hose couplings we offer. They have a flat face, which ensures minimal fluid loss when connecting and disconnecting your hose line. They're double-shut-off style, so there is a valve in both the plug and the socket. Use with hydraulic oil. To make a connection, you'll need a plug and a socket with the same coupling size. These couplings are compatible with Snap-Tite 71 series. Not rated for vacuum. Female NPTF (Dryseal) threads are compatible with male NPT threads. Female NPSF (National Pipe Straight Fuel) threads are compatible with male NPT and NPTF threads.

Zinc-plated steel has fair corrosion resistance and high wear resistance.

Type 316 stainless steel has excellent corrosion resistance and high wear resistance.

Plugs— Also known as nipples, these plugs have a Buna-N (nitrile) seal.

Push-to-Connect Sockets— To connect, push plug firmly into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects. Sockets have a Buna-N (nitrile) seal.

Note: Pressure ratings given are for static (constant) pressure conditions.

Warning: Never attempt to connect or disconnect couplings when under pressure.

★ Connection is NPT. ■ Connection is NPSF (National Pipe Straight Fuel).

Warning! Flow should be stopped before you disconnect your line.

Please Read Before Ordering: To determine the ***shape*** of your coupling, compare the end of your plug to the illustrations shown on page 298. You'll also find an illustration of the plug's shape in each presentation. ***Coupling size*** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2".

Threaded OD or ID	3/8"	1/2"	5/8"	3/4"	1"	1 5/8"
Pipe Size	1/8"	1/4"	3/8"	1/2"	3/4"	1"

Snap-Tite H-Shape Hose Couplings

- Maximum Pressure: See below
- Temperature Range: –40° to +200° F
- Hose: Use rubber
- Clamps: For hose barb couplings, use worm-drive clamps (see pgs. 274-277)

With your choice of materials and hose connections, these double-shut-off couplings are ideal for a variety of applications. They have a valve in both the plug and the socket to stop all flow when your hose line is disconnected. Use with air, water, coolants, hydraulic oil, and petroleum. To make a connection, you'll need a plug and a socket with the same coupling size. All come with a Buna-N (nitrile) seal and meet MIL-C-51234. Not rated for vacuum. NPTF (Dryseal) threads are compatible with male NPT threads.

Note: Pressure ratings given are for static (constant) pressure conditions.

Zinc-plated steel has fair corrosion resistance and high wear resistance. ***Brass*** and ***aluminum*** have good corrosion resistance and low wear resistance. ***Type 316 stainless steel*** has excellent corrosion resistance and high wear resistance.

Plugs—Also known as nipples.

Sleeve-Lock Sockets—To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug.

Optional Combination Dust Caps/Plugs—With a dust cap on one side and a dust plug on the other, these combination dust caps/plugs provide the easiest way to keep contaminants out of the plugs and sockets listed below. Made from black plastic.

International Standard (ISO A and B) Hose Couplings

- Max. Pressure: See below
- Temp. Range: –40° to + 250° F, except acetal is –4° to +195° F
- Hose: See material descriptions

Considered the international standard for double-shut-off couplings, these couplings have a valve in both the plug and the socket to stop all flow when your hose line is disconnected. Vacuum rating is 27.4″ Hg @ 72° F for all except acetal, which is rated 28″ Hg @ 68° F. NPTF (Dryseal) threads are compatible with NPT threads.

Note: Pressure ratings reflect static (constant) pressure conditions.

Zinc-plated steel has fair corrosion resistance and high wear resistance. For use with hydraulic oil. Use with rubber hydraulic hose.

Brass has good corrosion resistance and low wear resistance. For use with hydraulic oil, air, and water. Use rubber hydraulic hose for hydraulic oil; use general purpose rubber hose for air and water.

Type 303 stainless steel has very good corrosion resistance and high wear resistance. For use with hydraulic oil, air, and water. Use rubber hydraulic hose for hydraulic oil; use general purpose rubber hose for air and water.

Acetal has excellent corrosion resistance and low wear resistance. Material is FDA compliant for use with food and beverage; also for use with hydraulic oil, air, water, and gasoline. Use rubber hydraulic hose for hydraulic oil; use general purpose rubber hose for air and water; use neoprene hose for gasoline. Color is white.

Plugs— Also known as nipples, all have a Buna-N (nitrile) seal.

Sleeve-Lock Sockets— To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug. All have a Buna-N (nitrile) seal. Sockets made of zinc-plated steel and Type 303 stainless steel also have a PTFE backup ring.

ISO Series A

Compatible with all couplings that meet ISO 7241-1 series A, such as Parker 6600 series and Aeroquip 5600 series.

ZINC-PLATED STEEL

Coupling Size (A)	Coupling (B)	Pipe Size, NPTF	Max. psi @ 72° F	Plugs, Female Pipe	Each	Sleeve-Lock Sockets, Female Pipe	Each
1/4	7/16″	1/4″	1/8″	5000	51335K59	$8.24	51335K49	$20.89

★ Combination dust cap/plug.

Warning! Flow should be stopped before you disconnect your line.

Quick-Disconnect Couplings

For information about pipe size, see pgs. 2-3. For information about quick-disconnect couplings, see pg. 298.

Measure A and B to Determine Coupling Size

Please Read Before Ordering: To determine the ***shape*** of your coupling, compare the end of your plug to the illustrations shown on page 298. You'll also find an illustration of the plug's shape in each presentation. ***Coupling size*** is an industry designation, not the actual measured size. To determine the actual size of your coupling, measure the "A" and "B" dimensions of the plug, as shown at left.

Pipe size also is an accepted industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 11/16", the next highest OD is 3/4" and the corresponding pipe size is 1/2".

Threaded OD or ID	1/2"	5/8"	3/4"	1"	1 5/8"
Pipe Size	1/4"	3/8"	1/2"	3/4"	1"

Pioneer-Shape Hose Couplings for Hydraulic Fluid

- Maximum Pressure @ 72° F: 3000 psi
- Temperature Range: –40° to +250° F
- Hose: Use high-pressure reinforced-rubber hose and hydraulic steel tubing

Pioneer-shape couplings are double-shut-off style, so there's a valve in both the plug and the socket to stop all flow when your hose line is disconnected. Couplings are made from zinc-plated steel, which has fair corrosion resistance and high wear resistance. Plugs and sockets with an *O-ring seal* provide a better seal than couplings with a *metal-to-metal seal*; the O-ring is made from Buna-N (nitrile). Vacuum rating is 27" Hg @ 72° F. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs

Also known as nipples, these plugs are compatible with Parker 4000 and 4200 series, as well as SafeWay S20 and S40 series.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Metal-to-Metal Seal, Female Pipe	Each	O-Ring Seal, Female Pipe	Each
1/4	9/16"	5/16"	1/4"	5341K57	$5.97	5341K91	$6.97
3/8	3/4"	11/32"	3/8"	5341K53	8.69	5341K92	9.35
1/2	13/16"	3/8"	1/2"	5341K54	7.62	5341K93	8.77
1/2	13/16"	3/8"	3/4"	5341K55	12.52	5341K94	13.14
1	1 7/32"	5/8"	1"	—	—	5341K56	27.86

Push-to-Connect Sockets

Compatible with Parker 4200 series and SafeWay S40 series. To connect, push plug firmly into socket until you hear a "click." To disconnect, slide sleeve forward until the plug ejects.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Metal-to-Metal Seal, Female Pipe	Each
1/4	9/16"	5/16"	1/4"	5341K61	$16.46
3/8	3/4"	11/32"	3/8"	5341K47	18.46
1/2	13/16"	3/8"	1/2"	5341K62	19.66
1/2	13/16"	3/8"	3/4"	5341K49	24.49

Sleeve-Lock Sockets

Compatible with Parker 4000 series and SafeWay S20 series. To connect, pull back sleeve, insert plug into socket, then release the sleeve. To disconnect, slide back sleeve and pull out the plug.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Metal-to-Metal Seal, Female Pipe	Each	O-Ring Seal, Female Pipe	Each
1/4	9/16"	5/16"	1/4"	5341K45	$11.83	5341K24	$13.57
3/8	3/4"	11/32"	3/8"	5341K63	15.98	5341K25	16.71
1/2	13/16"	3/8"	1/2"	5341K48	17.11	5341K26	18.86
1	1 7/32"	5/8"	1"	—	—	5341K51	54.06

Optional Dust Caps for Plugs

Made from rubber. Color is black, unless noted otherwise.

For Coupling Size		Each
1/4	5341K71	$2.68
3/8	5341K72	3.43
1/2	5341K73■	3.00
1	5341K75	7.26

■ Available in your choice of colors. Please specify color: black, blue, green, red, or yellow.

Optional Dust Plugs for Sockets

Made from rubber. Color is black, unless noted otherwise.

For Coupling Size		Each
1/4	5341K81	$3.17
3/8	5341K96	3.63
1/2	5341K97■	3.00
1	5341K85	6.86

■ Available in your choice of colors. Please specify color: black, blue, green, red, or yellow.

High-Pressure Thread-Lock Hose Couplings for Hydraulic Fluid

- Maximum Pressure @ 72° F: 10,000 psi
- Temperature Range: –40° to +250° F
- Hose: Use reinforced rubber

Plugs and sockets thread together, allowing you to connect and disconnect them while operating at maximum working pressure. They're double-shut-off style, so there's a valve in both the plug and the socket to stop all flow when your hose line is disconnected. Couplings are made from zinc-plated steel, which has fair corrosion resistance and high wear resistance. They're compatible with Enerpac series and Parker 3000 series couplings. To make a connection, the plug and socket must have the same coupling size. Not rated for vacuum. NPTF (Dryseal) threads are compatible with NPT threads.

Plugs have a Type 302 stainless steel ball shut-off.

Sockets have a Buna-N (nitrile) seal. To connect, insert plug into socket, slide the sleeve forward, and thread onto plug. To disconnect, unthread the plug from the socket, slide the sleeve back, and pull out the plug.

Note: Pressure ratings given are for static (constant) pressure conditions.

Also Available: Type 316 stainless steel couplings with a 3/8 coupling size × 3/8" pipe connection. Please ask for 5622K1 and specify plug or socket.

Coupling Size	Coupling (A)	Coupling (B)	Pipe Size, NPTF	Plugs, Female Pipe	Each	Sockets, Male Pipe	Each
1/4	5/8"	7/16"	1/4"	53455K36	$10.22	53455K24	$14.81
3/8	3/4"	5/8"	3/8"	53455K55	11.00	53455K28	16.42

Warning! Flow should be stopped before you disconnect your line.

For information about pipe size, see pages 2-3.

How to Order Cam-and-Groove Hose Couplings

1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	15/16″	1¼″	1 7/16″	1 13/16″	2⅛″	2½″	3″	3⅝″	4¾″	5¾″	6 15/16″
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

2. **Determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD), as shown at left. Then, round up the measurement to the closest OD listed in the chart and select the corresponding pipe size. For example, if the OD measures 1 3/16″, the next highest OD is 1⅜″ and the corresponding pipe size is 1″.

Threaded OD	¾″	1″	1⅜″	1⅝″	1⅞″	2⅜″	2⅞″	3½″	4½″	5⅝″	6⅝″
Pipe Size	½″	¾″	1″	1¼″	1½″	2″	2½″	3″	4″	5″	6″

Metal Cam-and-Groove Hose Couplings

- Maximum Pressure: See below
- Temperature Range: −65° to +250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

Metal cam-and-groove couplings are stronger and more durable than the plastic versions. They provide quick access to medium- and large-diameter hose lines. All couplings meet Fed. Spec. A-A-59326 (formerly MIL-C-27487). They're compatible with PT Coupling, Dixon "Andrews", and Ever-Tite cam-and-groove couplings.

Cam-and-groove couplings consist of two pieces: a socket (also called a coupler) and a plug (also called an adapter); see pages 315-317 for plugs. To be used together, the socket and plug must have the same coupling size. To connect, insert the plug into the socket and press down the levers. The levers fit snugly into the groove on the plug's body and force the plug down against the gasket to form a tight seal. To disconnect, lift both levers and pull out the plug. For replacement gaskets, see page 318.

Material	Features	Applications
Aluminum	Good abrasion resistance. Fair corrosion and chemical resistance. Lightweight and economical.	Use with water, ethylene glycol, hydraulic oil, petroleum oil, gasoline, and diesel fuel.
Hard-Anodized Aluminum	Good abrasion, corrosion, and chemical resistance. Lightweight and economical.	Use with sand and salt water, as well as with water, ethylene glycol, hydraulic oil, petroleum oil, gasoline, and diesel fuel.
Brass	More economical than stainless steel. Fair abrasion and chemical resistance. Good corrosion resistance.	Use with salt water and waste water. Also use with water, ethylene glycol, hydraulic oil, petroleum oil, gasoline, and diesel fuel.
Type 316 Stainless Steel	Excellent abrasion, corrosion, and chemical resistance.	Ideal for use with citric acid, salt water, and waste water; also use with water, ethylene glycol, hydraulic oil, petroleum oil, gasoline, and diesel fuel.

Sockets with Threaded Male Pipe Connection

Also known as B couplers, these sockets have a Buna-N (nitrile) gasket and zinc-plated steel pull rings, except the Type 316 stainless steel sockets have Type 304 stainless steel pull rings. Sockets ***with locking levers*** prevent accidental disconnection.

With Nonlocking Levers

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use metal cam-and-groove couplings with compressed air or gas.

Metal Cam-and-Groove Hose Couplings

For information about pipe size, see pgs. 2-3. For information about cam-and-groove couplings, see pg. 311.

How to Order Cam-and-Groove Hose Couplings

1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	15/16″	1¼″	1 7/16″	1 13/16″	2⅛″	2½″	3″	3⅝″	4¾″	5¾″	6 15/16″
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

2. **For all couplings (except those with a barbed end), determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown at left. For ***threaded*** couplings, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1 3/16″, the next highest ID or OD is 1⅜″ and the corresponding pipe size is 1″. For ***unthreaded*** couplings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	¾″	1″	1⅜″	1⅝″	1⅞″	2⅜″	2⅞″	3½″	4½″	5⅝″	6⅝″
Unthreaded ID or OD	—	—	—	—	1.90″	2.375″	—	3.50″	4.50″	—	6.625″
Pipe Size	½″	¾″	1″	1¼″	1½″	2″	2½″	3″	4″	5″	6″

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: –65° to +250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

All sockets have a Buna-N (nitrile) gasket and zinc-plated steel pull rings, except the Type 316 stainless steel sockets have Type 304 stainless steel pull rings. For plugs, see pages 315-317; for replacement gaskets, see page 318.

Sockets with Threaded Female Pipe Connection

With Locking Levers

Also known as D couplers. Sockets ***with locking levers*** prevent accidental disconnection.

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use metal cam-and-groove couplings with compressed air or gas.

Metal Cam-and-Groove Hose Couplings

For information about pipe size, see pgs. 2-3. For information about cam-and-groove couplings, see pg. 311.

How to Order Cam-and-Groove Hose Couplings

1. Determine the coupling size. Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	15/16″	1 1/4″	1 7/16″	1 13/16″	2 1/8″	2 1/2″	3″	3 5/8″	4 3/4″	5 3/4″	6 15/16″
Coupling Size	1/2	3/4	1	1 1/4	1 1/2	2	2 1/2	3	4	5	6

2. Determine the pipe size. Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. For ***threaded*** couplings, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1 3/8″ and the corresponding pipe size is 1″. For ***unthreaded*** couplings, take the actual measurement and select the corresponding pipe size.

Threaded OD or ID	3/4″	1″	1 3/8″	1 5/8″	1 7/8″	2 3/8″	2 7/8″	3 1/2″	4 1/2″	5 5/8″	6 5/8″
Unthreaded ID	—	—	—	—	—	2.375″	—	3.50″	4.50″	—	6.625″
Pipe Size	1/2″	3/4″	1″	1 1/4″	1 1/2″	2″	2 1/2″	3″	4″	5″	6″

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: –65° to +250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

All ***sockets*** and ***caps*** have a Buna-N (nitrile) gasket and zinc-plated steel pull rings, except the Type 316 stainless steel sockets have Type 304 stainless steel pull rings. For more sockets, see pages 311-313. For plugs, see pages 315-317. For replacement gaskets, see page 318.

Sockets with Flanged Connection

Also known as PFC couplers, all have an unthreaded flanged end (Class 150) that bolts to a hose with a flanged connection of the same size for easy access to your line. ***Aluminum*** flanges have a flat face. ***Type 316 stainless steel*** flanges have a raised face, except *coupling size 6* has a flat face.

Coupling Size	Pipe Size	Flange OD (A)	Bolt Circle Dia. (B)	No. of Bolt Holes	Recom'd Bolt Size	Max. psi @ 72° F	Aluminum with Brass Levers	Each	Type 316 SS with Type 316 SS Levers	Each

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use metal cam-and-groove couplings with compressed air or gas.

For information about pipe size, see pgs. 2-3. For information about cam-and-groove couplings, see pg. 311.

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

Socket-to-Socket Connection

Also known as C×C couplers.

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use metal cam-and-groove couplings with compressed air or gas.

How to Order Cam-and-Groove Hose Couplings

1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	15/16″	1¼″	1 7/16″	1 13/16″	2⅛″	2½″	3″	3⅝″	4¾″	5¾″	6 15/16″
Coupling Size	½	¾	1	1¼	1½	2	2½	3	4	5	6

2. **For all couplings (except those with a barbed end), determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the inside diameter (ID) or outside diameter (OD), as shown at left. For ***threaded*** couplings, round up the measurement to the closest ID or OD listed in the chart and select the corresponding pipe size. For example, if the ID or OD measures 1 3/16″, the next highest ID or OD is 1⅜″ and the corresponding pipe size is 1″. For ***unthreaded*** couplings, take the actual measurement and select the corresponding pipe size.

Threaded ID or OD	1″	1⅜″	1⅞″	2⅜″	3½″	4½″	6⅝″
Unthreaded ID or OD	—	—	1.90″	2.375″	3.50″	4.50″	6.625″
Pipe Size	¾″	1″	1½″	2″	3″	4″	6″

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

- Maximum Pressure: See below
- Temperature Range: –65° to +250° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

All ***sockets*** have a Buna-N (nitrile) gasket and zinc-plated steel pull rings, except the Type 316 stainless steel sockets have Type 304 stainless steel pull rings. For sockets, see pgs. 311-315; for replacement gaskets, see pg. 318.

Plugs with Hose Barb Connection

Also known as E adapters. Secure hose to the barbed end with low-profile clamps (see page 283) or banding with a buckle (see page 284).

3	3″	200	51415K342	34.93	53015K342	97.52
4	4″	150	51415K343	45.30	53015K343	146.39

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use metal cam-and-groove couplings with compressed air or gas.

For information about pipe size, see pgs. 2-3. For information about cam-and-groove couplings, see pg. 311.

Metal Cam-and-Groove Hose Couplings *(Continued from previous page)*

Plugs with Flange Connection

Also known as PFA adapters. All have an unthreaded flanged end (Class 150) that bolts to a hose with a flanged connection of the same size for easy access to your line. ***Aluminum*** flanges have a flat face. ***Type 316 stainless steel*** flanges have a raised face, except *coupling size 6* has a flat face.

Coupling Size	Pipe Size	OD Flange (A)	Bolt Circle Dia. (B)	No. of Bolt Holes	Recom'd Bolt Size	Max. psi @ 72° F	Aluminum	Each	Type 316 SS	Each

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use metal cam-and-groove couplings with compressed air or gas.

Metal Cam-and-Groove Hose Couplings

For information about pipe size, see pages 2-3.

How to Order Cam-and-Groove Hose Couplings

1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	1¼″	1⁷⁄₁₆″	2⅛″	2½″	3″	3⁵⁄₈″	4¾″
Coupling Size	¾	1	1½	2	2½	3	4

2. **Determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1³⁄₁₆″, the next highest OD or ID is 1⅜″ and the corresponding pipe size is 1″.

Threaded OD or ID	¾″	1″	1⅜″	1⅝″	1⅞″	2⅜″	3½″	4½″
Pipe Size	½″	¾″	1″	1¼″	1½″	2″	3″	4″

Gaskets for Metal Cam-and-Groove Hose Couplings

***Buna-N (Nitrile) Rubber*—**Use with water, salt water, waste water, sand, ethylene glycol, hydraulic oil, petroleum oil, gasoline, diesel fuel, and citric acid. Temperature range is –65° to +275° F. Color is black.

***Viton® Fluoroelastomer*—**Use with water, salt, detergents, varnish, ethanol, and biodiesel. Temperature range is –40° to +400° F. Color is green.

***FEP-Encased Silicone*—**Both the FEP casing and the silicone core are FDA compliant. Use with vegetable oil and mineral oil. Temperature range is –75° to +400° F. Color is red.

***FEP-Encased Viton® Fluoroelastomer*—**The FEP casing is FDA compliant; however, the Viton® fluoroelastomer core is not. Use with acids and solvents, as well as in applications requiring greater resistance to chemicals. Temperature range is –15° to +400° F. Color is black.

Metal Cam-and-Groove Hose Couplings with Shut-Off Valve

- Maximum Pressure: See below
- Temperature Range: Aluminum: –65° to +250° F; Type 316 SS: –40° to +400° F
- Hose: Use polyethylene, polyurethane, PVC, and rubber

Also known as dry disconnects, both the socket and the plug have a shutoff valve for minimal fluid loss when disconnecting your hose line. *Note*: The sockets and plugs in this presentation must be used together; they are not compatible with any other style of coupling. Use with water, ethylene glycol, and hydraulic oil.

Cam-and-groove couplings consist of two pieces: a socket (also called a coupler) and a plug (also called and adapter). To connect, insert the plug into the socket, press down the levers, and turn the handle to the "open" position. To disconnect, turn handle to the "closed" position, lift the levers, and pull out the plug. Couplings cannot be disconnected when the valve is open. Connections are female NPT.

Aluminum has good abrasion, corrosion, and chemical resistance. ***Type 316 stainless steel*** has excellent abrasion, corrosion, and chemical resistance.

Polypropylene Cam-and-Groove Hose Couplings with Shut-Off Valve

- Maximum Pressure: See below
- Temperature Range: –20° to +150° F
- Hose: Use polyethylene, PVC, and EPDM

Lighter in weight and more economical than the metal couplings above, these two-piece polypropylene couplings are also known as dry disconnects. Each end has a valve for minimal fluid loss when disconnecting your hose line; they cannot be disconnected when the valves are open. They also have PTFE seats and a fluoroelastomer face seal between the two halves. Polypropylene offers poor abrasion resistance and very good corrosion and chemical resistance. Use with water, ethylene glycol, acetic acid, and magnesium chloride. Connections are female NPT.

Pipe Size, NPT	Max. psi @ 72° F	O'all Lg.		Each
1½″	100	8¾″	5064K11	$276.33
2″	100	8¾″	5064K12	276.33

Warning! Do not use cam-and-groove couplings with compressed air or gas.

For information about pipe size, see pages 2-3.

Plastic Cam-and-Groove Hose Couplings

- Maximum Pressure: See below
- Temperature Range: See below
- Hose: Use polyethylene, PVC, polyurethane, and rubber

Plastic cam-and-groove couplings are lighter in weight than those made from metal. They provide quick access to medium- and large-diameter hose lines. All couplings meet Fed. Spec. A-A-59326 (formerly MIL-C-27487).

Cam-and-groove couplings consist of two pieces: a socket (also known as a coupler) and a plug (also known as an adapter). To be used together, the socket and plug must have the same coupling size. To connect, insert the plug into the socket and press down the levers. The levers fit snugly into the groove on the plug's body and force the plug against the gasket to form a tight seal. To disconnect, lift both levers and pull out the plug. For plugs and replacement gaskets, see page 321.

Material	Features/Applications	Color	Gasket Material	Temperature Range
Polypropylene	An economical choice. Good abrasion, corrosion, and chemical resistance. Use with water and ethylene glycol.	Black	EPDM	–20° to +150° F
FDA/NSF Polypropylene	FDA (food and beverage) CFR21 177.2510, NSF-51 (food), and NSF-61 (drinking water) compliant. Good abrasion, corrosion, and chemical resistance.	White	FDA-Compliant Buna-N (Nitrile)	+10° to +180° F
Nylon	Reinforced with glass fiber for strength. Very good abrasion, corrosion, and chemical resistance. Use with water, ethylene glycol, gasoline, and varnish.	Yellow	EPDM	–30° to +200° F
PVDF	Excellent abrasion, corrosion, and chemical resistance. Use with gasoline, sodium, linseed oil, and lactic acid.	White	EPDM	–20° to +250° F

Sockets with Threaded Male Pipe Connection

Also known as B couplers. All have two Type 304 stainless steel levers (unless noted) with stainless steel pull rings, except the *polypropylene sockets with locking levers* have zinc-plated steel pull rings, and the *PDVF sockets* have stainless steel pins instead of rings.

Sockets ***with locking levers*** prevent accidental disconnection.

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use plastic cam-and-groove couplings with compressed air or gas.

Plastic Cam-and-Groove Hose Couplings

For information about pipe size, see pgs. 2-3. For information about cam-and-groove couplings, see pg. 319.

How to Order Cam-and-Groove Hose Couplings

1. **Determine the coupling size.** Coupling size is an industry designation, not the actual measured size. To determine coupling size, measure the inside diameter (ID) of the socket or outside diameter (OD) of the plug, as shown at left. Match the actual size to the coupling size listed in the chart below. For example, if the actual size measures 3⅝″, the coupling size is 3.

Actual ID or OD	1¼″	1 7/16″	2⅛″	2½″	3⅝″	4¾″
Coupling Size	¾	1	1½	2	3	4

2. **For all couplings (except those with a barbed end), determine the pipe size.** Pipe size is also an industry designation, not the actual measured size. To determine pipe size, first use a ruler to measure the outside diameter (OD) or inside diameter (ID), as shown at left. Then, round up the measurement to the closest OD or ID listed in the chart and select the corresponding pipe size. For example, if the OD or ID measures 1 3/16″, the next highest OD or ID is 1⅜″ and the corresponding pipe size is 1″.

Threaded OD or ID	¾″	1″	1⅜″	1⅝″	1⅞″	2⅜″	3½″	4½″
Pipe Size	½″	¾″	1″	1¼″	1½″	2″	3″	4″

■Levers do not lock; they have steel pins instead of stainless steel pull rings. ▲Levers do not lock.

90° Elbows

Sockets have nonlocking levers. For sockets with a barbed connection, secure hose with worm-drive clamps (see page 274) or low-profile clamps (see page 283).

(Continued on following page)

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use plastic cam-and-groove couplings with compressed air or gas.

For information about pipe size, see pgs. 2-3. For information about cam-and-groove couplings, see pg. 319.

Plastic Cam-and-Groove Hose Couplings *(Continued from previous page)*

Plugs with Threaded Male Pipe Connection

Also known as F adapters.

Warning! It is important to relieve all pressure before disconnecting the couplings. Do not use plastic cam-and-groove couplings with compressed air or gas.

Steel Automatic-Winding Hose Reels

Medium Duty

Controlled-Retraction Heavy Duty

Super Duty

Hose locks in place when pulled out of these reels—a quick tug retracts hose. All reels are steel with a blue powder-coated finish.

Versa-Mount Reels—Mount on the floor, wall, or ceiling. All have a 1/4″ thick support bracket, two 1/2″ dia. mounting holes, and two 1/2″ wide mounting slots (fasteners not included). Reels have a brass (unless noted) female swivel inlet with a Buna-N (nitrile) seal, except reels *with Type 316 stainless steel swivel* have a stainless steel swivel instead of brass. The hose end has a brass rigid male fitting, except reels *with industrial-shape quick-disconnect coupling* and reels *with Type 316 stainless steel fitting*.

The *medium duty* reels are for use in applications where the hose is pulled straight out of the reel. The *heavy duty* reels have more support for when hose needs to be pulled out of the reel at an angle. The *controlled-retraction* reels are also called safety reels; the retraction speed is reduced to five feet per second to increase operator safety.

Floor-Mount Super Duty Reels—Strong and well supported to handle large diameter hose. Ideal for use in vibration applications. All have six 1/2″ dia. mounting holes (fasteners not included). The reel *with 3/4″ ID hose* has a brass female swivel inlet with a Buna-N (nitrile) seal; the hose end has a brass male rigid fitting. Reels *with 1″ ID hose* have a nickel-plated steel female swivel inlet with a fluoroelastomer (Aflas) seal; the hose end has a zinc-plated steel male rigid fitting.

PVC hose is lightweight and abrasion resistant. Use with air and water. The tube and cover are PVC with yarn reinforcement. Temperature range is −15° to +150° F. **To Order:** Please specify part number and color of hose: blue, red, or yellow.

EPDM hose is weather resistant. Use with air and water. The tube and cover are EPDM with textile reinforcement. Temperature range is −40° to +200° F, unless noted. **To Order:** Please specify part number and color of hose: black or red.

Buna-N/neoprene hose is for use with oil, glucose, citric acid, lactic acid, and mineral spirits, as well as with air and water. The tube is Buna-N (nitrile) and the cover is neoprene with textile reinforcement. Temperature range is −20° to +200° F. Hose color is black.

Reels without hose allow you to connect your own hose with a male NPT fitting to the reel. They have a female outlet that is the same size as the swivel inlet. Temperature range is −40° to +250° F.

Also Available: Replacement reel parts. Please specify the reel part number and the part you need: spring for latching mechanism (also called a spring dog), spring can assembly, roller bracket, swivel, or shoulder bolt.

● Female swivel inlet is nickel-plated steel. ♦ Temperature range is −7° F to +200° F.

Optional Mounting Brackets for All Versa-Mount Reels

Made from steel, all have two 1/2″ dia. holes and two 1/2″ wide slots for mounting (fasteners not included).

Swivel-base brackets swivel 345°. Mount to the floor or ceiling.

Wall-swing brackets pivot the reel 180°. Mount to the wall.

Beam brackets easily mount overhead on 3″-8 1/2″ wide I-beams and H-beams.

For Mounting Base Size	Swivel-Base Brackets	Each	Wall-Swing Brackets	Each	Beam Brackets	Each
6″ Lg.×6″ Wd.	5320K98	$40.74	5320K63	$58.98	5320K95	$75.05
9″ Lg.×8″ Wd.	5320K98	40.74	5320K97	88.98	5320K96	74.61

Automatic-Winding Hose Reels for High-Pressure Hose

Take the work out of winding high-pressure hose. The hose locks in place when pulled out of these reels; retract hose with a quick tug. Reels are steel with a blue powder-coated finish and have a 1/4″ thick support bracket. They also have a brass swivel inlet (unless noted) with a Buna-N (nitrile) seal. Reels mount to the floor, wall, or ceiling; they have two 1/2″ dia. mounting holes and two 1/2″ wide mounting slots (fasteners not included). See pg. 322 for optional mounting brackets.

Versa-Mount Medium Duty Reels—Use in applications where the hose is pulled straight out of the reel.

Versa-Mount Heavy Duty Reels—Have more support for when the hose needs to be pulled out of the reel at an angle.

Reels with hose are for use with hydraulic oil, as well as with water in pressure-washer applications. Hose has a polyester tube and a black synthetic rubber cover with steel wire reinforcement. The hose end has a zinc-plated steel rigid fitting. Hose rated *2500 psi* is SAE 100R1; *3000 psi* is SAE 100R17; and *4000* and *5000 psi* is SAE 100R16. Temp. range is –40° to +200° F.

Reels without hose have a female outlet that is the same size as the swivel inlet. Temp. range is –40° to +250° F.

♣ The swivel inlet is zinc-plated steel.

Lightweight Automatic-Winding Hose Reels

These lightweight reels are resistant to corrosion. The hose locks in place when pulled out of these reels; retract hose with a quick tug. Mount to the floor, wall, or ceiling; mounting fasteners are not included.

Glass-Filled Polypropylene Reels—Black with a red powder-coated steel base, these reels have an adjustable hose guide, a steel rigid inlet, two 5/16″ dia. mounting holes, and two 5/16″ wide mounting slots.

Aluminum Reels—Have a blue powder-coated finish. They have a brass swivel inlet with a Buna-N (nitrile) seal, two 1/2″ dia. mounting holes, and two 1/2″ wide mounting slots.

Reels with PVC hose are for use with air and water. Hose has a PVC tube and red PVC cover with yarn reinforcement. The hose end has a brass rigid fitting; the fitting has NPTF (Dryseal) threads on the *glass-filled polypropylene reels* and NPT threads on the *aluminum reels*. NPTF threads are compatible with NPT threads. Temperature range is 32° to 150° F.

Reels without hose have a female outlet that is the same size as the inlet. Temperature range is 32° to 150° F for the *glass-filled polypropylene reels*; –65° to +250° F for the *aluminum reels*.

Type 304 Stainless Steel Automatic-Winding Hose Reels

Corrosive environments are no problem for these Type 304 stainless steel reels. Hose locks in place when pulled out; retract hose with a quick tug. All reels have a female inlet with NPT or NPTF (Dryseal) threads. The reels that have a female swivel inlet include a Buna-N (nitrile) seal, except the 1″ inlets include a fluoroelastomer (Aflas) seal.

Versa-Mount Medium Duty Reels—Mount to the floor, wall, or ceiling. Reels have four 7/16″ wide mounting slots, except 5132K21, K22, K46, K71, and K72 have two 1/2″ dia. mounting holes and two 1/2″ wide mounting slots (fasteners not included).

Floor/Wall-Mount Extra-Strength Reels—The frame-style construction provides extra strength to handle large diameter hose. Mount to the floor or wall. They have four 1/2″ dia. mounting holes (fasteners not included).

Reels with chemical hose are for use with air, water, paint, and solvents. Hose has a nylon tube, textile reinforcement, and a red vinyl/nitrile cover, except 5132K21 has a black neoprene cover. The hose end has a rigid fitting with NPT or NPTF (Dryseal) threads. Temperature range is –30° to +160° F.

Reels with washdown hose are for use with water in food areas. Hose has an EPDM tube, polyester reinforcement, and a white EPDM cover. The hose end has a rigid fitting with NPT or NPTF (Dryseal) threads. Temperature range is –40° to +180° F.

Reels without hose have a female outlet that is the same size as the inlet. Temperature range is –20° to +200° F.

Compact Automatic-Winding Hose Reels

Great for confined spaces. Hose locks in place when pulled out of these reels; retract hose with a quick tug. Reels are steel with a red powder-coated finish. They have four 3/8″ dia. mounting holes (except 53205K39 has six holes) and can be mounted to the floor or wall (fasteners not included). Reels also have an 18″ inlet hose with a brass swivel fitting. Hose has a PVC tube and red PVC cover with textile reinforcement, except 53205K39 has a Buna-N (nitrile) tube and black Buna-N (nitrile) cover. The hose end has a brass rigid fitting. Use with air and water. Temperature range is –15° to +150° F. Hose meets RMA (Rubber Manufacturer's Association) Class B for oil resistance. For replacement hose, see pgs. 240-241.

Enclosed Automatic-Winding Hose Reels

Steel

An enclosure protects the hose when not in use and keeps it out of sight. The hose locks in place when pulled out of these reels; retract hose with a quick tug. Reels have two 1/2″ dia. mounting holes and two 1/2″ wide mounting slots. They can be mounted to the floor, wall, or ceiling (fasteners not included).

Steel reels have a blue powder-coated finish. Reels have a brass swivel inlet with a Buna-N (nitrile) seal. Hose has an EPDM tube and red EPDM cover with textile spiral reinforcement. The hose end has a brass rigid fitting. Use with air and water. Temperature range is –40° to +212° F. For replacement hose see pages 240-241.

Type 304 stainless steel reel has a polished finish. Reel has a stainless steel swivel inlet with a Buna-N (nitrile) seal. Hose has a red SBR tube and cover. The hose end has a stainless steel rigid fitting. Use with air and water. Temperature range is –4° to +212° F.

Enclosed Polypropylene Automatic-Winding Hose Reels

Made from black polypropylene with a carrying handle, these reels are lighter in weight and easier to transport than the enclosed reels above. The hose locks in place when pulled out of these reels; retract hose with a quick tug. Reels have a steel support bracket and a 3-ft. long inlet hose, except 5529K36 has a 5-ft. long inlet hose; the fittings on the inlet hose are rigid brass, unless noted. Reels are free standing, but can be mounted to the wall or ceiling with the included steel bracket. They have four 9/32″ dia. mounting holes (fasteners not included). The hose has a PVC tube and cover with polyester reinforcement. The hose end has a brass rigid fitting. Temperature range is 40° to 140° F.

Reels with Red PVC Hose— Use with air; 5529K18 comes with a 1/2″ NPT × 3/4″ GHT (Garden Hose Thread) adapter and is also for use with water.

Reels with White PVC Hose— Use 5529K36 with water in food service washdown applications; use 5529K47 for hot water washdown applications.

Optional floor/bench mount bracket is 3″ Wd. × 5 3/4″ Dp. Includes a 15″ long mounting tube that attaches to the bracket with four 1/4″ mounting holes (fasteners not included).

♦ Inlet hose has a swivel fitting with GHT (Garden Hose Thread) female threads. ★ Hose end has GHT male threads.

Automatic-Winding Dual Hose Reels

Open

Enclosed

Two reels are attached to a single mounting base so you have access to two independently operating hoses. The hose locks in place when pulled out of these reels; retract hose with a quick tug. Reels have four 1/2″ Lg. × 3/4″ Wd. mounting slots and can be mounted to the floor, wall, or ceiling (fasteners not included). Reels come with an 18″ long inlet hose with a brass swivel inlet. Hose has a PVC tube and a red PVC cover with textile cord reinforcement. The hose end has a brass rigid fitting. Hose meets RMA (Rubber Manufacturer's Association) Class B for oil resistance. Use with air and water. Temperature range is –15° to +150° F. For replacement hose, see page 241.

Open reels are steel with a red powder-coated finish.

Enclosed reels are steel with a white powder-coated finish. An enclosure protects the hose when not in use and provides a neat appearance. For indoor or outdoor use.

Also Available: Replacement reel parts. Please specify reel part number and the part you need: spring for latching mechanism (also called a spring dog), spring-can assembly, swivel, spring assembly, or hose assembly.

Combination Air Hose and Electric Cord Automatic-Winding Reels

One reel does the job of two—each reel comes with an air hose and an electric cord. Both the hose and the cord lock in place when pulled out of these reels; retract hose with a quick tug. The two sides can be operated independently. Reels are steel with a red powder-coated finish; they have an 18″ long inlet with a brass swivel fitting and a 5-ft. inlet electric cord for 115 VAC, 60 Hz, single phase operation. Reels have four ½″ Lg. × ¾″ Wd. mounting slots. They can be mounted to the floor, wall, or ceiling (fasteners not included). Temperature range is –15° to +150° F.

The hose is for use with air only. It has a red PVC tube and cover with textile cord reinforcement. The hose end has a brass rigid fitting. Hose meets RMA (Rubber Manufacturer's Association) Class B for oil resistance. For replacement hose, see page 241.

Enclosed reels protect the air hose and electric cord when not in use and provide a neat appearance.

Economy Manual-Winding Hose Reels

Looking for an inexpensive way to store air hose? These reels keep air hose neatly stored for safety and reduced wear. To rewind hose simply turn the hand crank. Reels are steel with a black finish. The mounting base is 7″ Lg. × 3″ Wd. and has four ⅜″ dia. mounting holes. Reels can be mounted to the floor, wall, or ceiling (fasteners not included).

Reels with hose include a 3-ft. long inlet hose with a brass rigid fitting. Hose has a PVC tube and cover with polyester reinforcement. The hose end has a brass rigid fitting. Hose color is red for 6868K2; orange for 6868K3. Use hose with air. Temperature range is 0° to 140° F.

Reels without hose let you connect your own hose with an NPT male fitting to the reel. Use with any length hose up to 100 ft.

Hose ID	Hose Lg.	Max. psi @ 72° F	Inlet Hose, NPT Male	Hose End, NPT Male	Reel, Ht. × Wd. × Dp.	Reels with PVC Hose	Each	Reels without Hose	Each
⅜″	50 ft.	300	¼″	¼″	18⅛″ × 12¼″ × 17¼″	**6868K2**	$68.27	**6868K6**	$52.76
⅜″	100 ft.	350	¼″	¼″	18⅛″ × 12¼″ × 17¼″	**6868K3**	82.55	**6868K6**	52.76

Manual-Winding Hose Reels

Neatly store your own air, water, pressure-washer, or lay-flat hose with these sturdy reels. (*Note*: Lay-flat hose must be rolled out before use.) *Style C* reels can also be used with fuel hose. To rewind your hose, simply turn the hand crank. Reels are made from heavy gauge steel and have a locking pin assembly that prevents accidental unwinding. All can be mounted to the floor or wall (fasteners not included).

Style A— Compact size makes these reels ideal for confined spaces. They have a black high-gloss painted finish. Reels have a female inlet with a Buna-N (nitrile) seal and male outlet. Temperature range is 40° to 200° F. Mounting base has four ½″ dia. mounting holes.

Style B— These reels have more capacity to handle longer lengths of hose than Style A. They have a black high-gloss painted finish. Reels have a female inlet with a Buna-N (nitrile) seal and male outlet. Temperature range is 40° to 200° F. Mounting base has eight ½″ dia. holes.

Styles A and *B* include a zinc-plated steel ½″ NPT female swivel that converts the male outlet to female threads, as well as a bushing that converts the ½″ connection to ⅜″.

Style C— The largest capacity manual-winding reels we offer. Reels have a blue painted finish. Temperature range is –20° to +225° F. 5332K65 has a brass female inlet and outlet with Buna-N (nitrile) seals and six ½″ wide mounting slots. 5332K66 and *K67* have a nickel-plated steel female inlet and outlet with fluoroelastomer (Aflas) seals and eight ½″ wide mounting slots. 5332K68 has an aluminum female inlet and outlet with Buna-N (nitrile) seals and two ½″ dia. mounting holes and eight ½″ wide mounting slots.

Wheel attachment kits for 5332K65 and ***K67*** contain a steel handle, slip-resistant rubber-capped front legs, and two 8″ dia. solid rubber tires that attach to the reels for easy portability.
